CHANGE

Shift to '93 models faster than for '92

continued from PAGE 1

new model year, citing the advent of new products and a slowly improving economy.

Domestic producers have scheduled fairly short downtime for changeover to production of 1993 models.

Changeover for General Motors plants is scheduled for the last two weeks of July.

Last year, some GM plants were down four to 16 weeks for extensive retooling for new 1992 models.

Ford will have a rolling changeover from July 31 through Aug. 24 at 14 of its 17 assembly plants.

Ford's Edison, N.J., and St. Paul, Minn., plants will have a three-month changeover due to the makeover of the Ford Ranger.

Model changeover at the Wixom, Mich., plant will end Oct. 5, when production of the new Lincoln Mark VIII is slated to begin. Wixom's changeover for the Lincoln Town Car and Continental will follow Ford Motor's regular schedule.

Chrysler Corp.'s model changeover will happen in July for 11 of the 12 assembly plants.

At the New Mack Avenue plant in Detroit, which makes the Dodge Viper, a two-week switchover is set for September.

Model changeover for transplants will take two weeks or less.

In general, changeover to production of 1993 models will be considerably faster than the 1992 changeover.

Most dealers are maintaining a strong buildout inventory while stepping up ordering for the new model year.

"Our product lineup is stronger than ever," said Ken Harris, sales manager of Lakeshore Ford Lincoln Mercury in Fredonia, N.Y.

"We haven't done this well since 1986. We are planning on a 50 percent increase in sales for 1993," Harris said.

The highlight of the 1993 Mercury lineup will be the new front-wheel-drive Mercury Villager minivan, which will be built in Avon Lake, Ohio.

Lincoln-Mercury dealers in general expect the Villager to boost floor traffic and sales.

"I anticipate the Villager will account for 10 to 15 percent of our volume," said Dan Marks, general sales manager of Libertyville Lincoln-Mercury in Libertyville, Ill.

"I hope the Villager will put a dent in the Plymouth and Dodge markets, which occupy 50 percent of the minivan industry," Marks said.

Some Lincoln-Mercury dealers expect the sporty new Mark VIII coupe to offer stiff competition to Cadillac's Seville sedan and Eldorado coupe.

Chrysler dealers said they are ordering heavily for 1993 and expect sales to soar with the introduction of the mid-sized LH sedans — the Eagle Vision, the Dodge Intrepid and the Chrysler Concorde.

Chrysler dealers in general say shoppers seem more optimistic than they have been in nearly two years.

GM dealers also seem to expect better business for 1993.

Sales are "on the road to normalcy," said Richard Baylis, sales manager of Bast Chevrolet in Seaford, N.Y.

Business at Bast Chevrolet has improved 15 percent compared to this time last year, and the dealership is placing strong orders for 1993.

The upcoming model changeover at GM plants already has spawned discontent among many employees.

Most GM workers refused to accept the company's plan to link vacations and shutdowns to save GM big bucks.

"GM did not negotiate the vacation requirements," said Ray Church, UAW Local 22 president for the Detroit-Hamtramck, Mich., plant.

"Our workers don't agree with the request or the way the company attempted to do it. GM should have been more considerate and come to the UAW first," Church said.

Dave Perdue, president of Local 276 at the Arlington, Texas, plant, said "The workers are angry that they've been asked to take vacation. They feel they've been left with no alternatives.

"The union has asked workers not to adhere to GM's request but to collect unemployment benefits," said Perdue.

Most GM plant workers will consider downtime a layoff period in order to take their accumulated vacation time later. AN

Dealer convicted in drug case

MIAMI — A dealer in used luxury cars has been convicted of conspiracy to smuggle cocaine into the United States by using his business as a front for drug trafficking.

Ramon Puentes, 56, became a millionaire selling Ferrari, Mercedes-Benz and other big-ticket cars after coming to Miami from his native Cuba in 1967.

He was indicted three years ago on money-laundering, racketeering and conspiracy charges. But the case was scaled back to gain his extradition from Uruguay, which does not recognize racketeering charges. Prosecutors went to court solely on the conspiracy count.

Puentes faces up to 30 years in federal prison at sentencing Sept. 4 before U.S. District Judge Jose Gonzalez.

Puentes was returned to the federal Metropolitan Correctional Center, where he has been held since last September.

Puentes' son, Raymond, is on trial under the same indictment.

Bottom of market sees sales rebound

Imports outpaced in subcompact sales

WILLIAM R. DIEM
Assistant Managing Editor

At the bottom of the car market, buyers are laying down their bucks and driving off the lots.

In May, when overall new-car sales were down 4.6 percent, the subcompact segment grew, albeit slightly. The *Automotive News* breakdown of market segment showed 180,289 sales in the subcompact segment, up 3.4 percent from last May.

Jeff Leestman, a spokesman for Honda North America Inc., said the recovery in subcompacts "could be a sign of the economy recovering. The consumers at that end of the spectrum are probably most affected by the recession."

Ford Motor Co. analyst Joel Pitcoff agreed. "Throughout the recession, the segments that have been hurt the most are those aimed at entry-level buyers," he said.

Pitcoff noted that the subcompact market is not as affected by program car sales to daily rental fleets as some other car segments are. Thus unsullied, the subcompact market is a good reflection of retail demand.

As in the overall market, the Big 3 are outpacing imports in subcompacts. Thanks to the mushrooming growth of Saturn, Big 3 sales in the segment were up 16.1 percent, while the imported models that have dominated for years fell 6.1 percent. Detroit had 48 percent of the segment, up from 42.8 percent a year ago.

Honda's Civic line, the top volume subcompact last May when it was running special incentives, was third this time, behind the Ford Escort and Toyota Corolla and ahead of Saturn and the Nissan Sentra.

The top five volume models account for half the segment. Year to date, all five are up from last year, in the same order as May.

Even Civic sales are ahead 95 units this year, despite the fact that Honda dealers have only Civic sedans and hatchbacks to sell. The Civic wagon, dropped after 1991, will not return. The CRX model will be replaced by the 1993 Civic del Sol late this summer, and a two-door model is likely to be added by Dec. 31.

"We haven't had a CRX in stock in probably six months, and we're usually pretty strong with them," said Dan Zeid, president of Scott Honda of Tempe, Ariz. Honda does not break out the CRX from Civic sales because they are based on the same platform, but one industry source said CRX sales were 2,400 a year ago May and 300 this year.

In Tempe, Zeid said, the low end of the Civic line "was strong in May."

In rural Michigan and suburban Detroit, multi-line dealer Sigmund Krug said, "Used cars are going great in all the stores," further indicating a revival at the entry level end of the spectrum.

He said Escort sales in Cheboygan's Krug Rivertown Ford were soft in May, but he looked for a 25 percent increase this month thanks to an incentive of $1,500 plus $500 for a first-time buyer. Cheboygan is not yet part of Ford's one-price Escort marketing program.

Ford's Pitcoff said May Escort sales were helped this year because the 1993 Escorts had been introduced, and for the first 20 days of May there were additional incentives on 1992 models.

Among other incentives, Ford offered 2.9 percent financing on 1992s, while a year earlier the best financing was 4.8 percent. ■

Compiled by Karen Detkowski

Sales per dealer rise despite market drop

Majority of makes post increases

KAREN DETKOWSKI
Staff Statistician

More than half of all franchises showed increases in May over April in the average number of vehicles sold by each dealer.

Although overall May sales did not exceed the year-ago month's sales, they were in line with earlier 1992 sales periods.

May had 25 selling days compared to 26 in April.

According to *Automotive News* sales-per-dealer calculations, eight of the top 10 makes reported increases in May. The largest was for Saturn franchises, which had an average eight-unit increase. Sales remained strong for the newest U.S. make.

Volvo dealers also fared better in May, selling an average of six more units than in April.

Infiniti dealers sold an average of five more units from a month ago, moving them up three places in the ranking. The division's dealers attribute their increases to the J30 launch and two first-place rankings in recent surveys by J.D. Powers and Associates.

Toyota dealers' average rose five units from April to May.

Mazda dealers took the biggest hit in May as their car and truck sales per dealer average declined 17 units from April's average.

Mitsubishi dealers' average dropped 7 units.

Dealer averages for 11 makes decreased and five makes remained even with April sales-per-dealer calculations. ■

Vehicles stockpiles thin in May

LINDSAY CHAPPELL
Staff Reporter

Inventories of both domestic and import cars continued dropping last month, from a 72-day supply on May 1 to a 68-day supply on June 1.

The supply of domestic cars fell slightly from 62 days in May to 61 days in June. Import inventories fell from 89 days to 86 days during the period.

Import truck inventories rose slightly. An 81-day supply existed on May 1, and an 83-day supply on June 1.

While Ford Motor Co. remained relatively stable with an inventory of 66 days, down from 67 days a month earlier, General Motors inventory increased from 60 days in May to 69 days in June.

Chrysler Corp. inventory fell from 67 days to 60 days, primarily because of lower domestic truck inventories. GM's change was due largely to increased inventories of its imported cars.

Mitsubishi Motor Sales of America Inc. retained an inventory of 145 days on June 1, up from 118 days on May 1. Subaru of America saw its inventories decline during the period, from 176 days in May to 139 days in June.

Volkswagen of America also decreased its inventories, from 145 days in May to 121 days this month.

Volvo Cars of North America Inc., which last month had a 109-day supply of cars, dropped to a 62-day supply this month.

The supply of Ford vans increased from May's 87-day supply. On June 1, the category showed a 107-day supply. Overall, Ford's truck sales resulted in reduced inventories. In May, the trucks showed an 83-day stock, while in June the inventory fell to a 74-day stock. AN

Flat Rock denies Mazda request for tax break

DAVID BARKHOLZ
Crain News Service

In a rare small-town rebuff to a Japanese transplant automaker, Flat Rock, Mich., has rejected a request by Mazda Motor Manufacturing (USA) Corp. for a tax abatement on $105 million in new investment at its assembly plant there.

The abatement would have cut Mazda's local tax bill by $800,000 in fiscal 1993 and by $1.6 million in 1994, a plant spokeswoman said.

The Flat Rock City Council voted against the 12-year, 50 percent abatement proposal. Mayor Richard Jones, who voted to deny the request, said residents had sacrificed enough in granting Mazda a 12-year, 100 percent abatement in 1985 on the original $550 million invested to build the plant.

Plant spokeswoman Nancy Hennigar said the denial imposes a punitive tax rate on Mazda and could deter future investment there. She said Mazda will not appeal the decision.

As a result of the vote, Mazda will pay $8 million in local taxes by 1994, rather than the $6.4 million it would have paid under the rejected plan.

Mazda, which recently sold 50 percent of the plant to Ford Motor Co., sought the abatement on $105 million of the $185 million it is investing for model changeovers and tooling for a right-hand-drive Ford Probe for export, Hennigar said.

The factory builds the Probe and the Mazda MX-6 and 626.

Jones said he voted against the abatement because city residents deserved some payback for the $450,000 in infrastructure work that Flat Rock provided to attract Mazda.

The 100 percent abatement granted to Mazda in 1985 forced Flat Rock to obtain a subsidy from the state to avoid raising local taxes, he said.

Flat Rock's population is 8,000. The Mazda factory employs 3,500. AN

New Taurus, Camry nip at Accord's heels

JEREMY SINEK
Staff Correspondent

TORONTO — The new 1992 Toyota Camry and revised Ford Taurus have been snipping at the heels of mid-sized car sales leader Honda Accord.

So far this model year, the Camry (15,991) and Taurus (15,922) are running neck and neck, with the Accord (18,579) clearly in their sights.

After eight months of the model year, Toyota has boosted Camry sales 76.4 percent and sold more Camrys than it did in all of model year 1991 (14,386). Accord sales, meanwhile, have slipped 23.8 percent.

The close race comes after the Accord easily led in the 1990 and 1991 model years. In those years, more Accords were sold than Tauruses and Camrys combined.

Ford of Canada spokesman John Jelinek said the Taurus hasn't been subject to any special promotions in Canada. But the car has benefitted from Ford's push to re-establish Taurus as the top-seller in the United States.

"A lot of border TV stations are showing a lot of commercials for Taurus, (and) we're getting some incremental benefit," he said.

Honda Canada doesn't seem fazed by the gaining competition.

"If you look at the performance of Honda through the entire recession, when it was straight up it was obvious eventually there would have to be some form of correction," said spokesman Dennis Manning.

Taurus outsold both Japanese nameplates last January and again in May. Camry led the segment in October and December and placed second behind the Taurus in May. The Accord was on top in November and February through April.

Canada importers pan content boost

STEVE MERTL
Special Correspondent

VANCOUVER, British Columbia — Canada's auto industry would be hurt by higher local content rules, says the group representing the country's importers and transplant manufacturers.

A 65-page report from the Association of International Automobile Manufacturers of Canada asserts that increasing the 50 percent minimum of North American made parts required under the 1989 U.S.-Canada Free Trade Agreement could jeopardize future investment by foreign carmakers.

Higher local content rules would make the existing industry inefficient and uncompetitive, says the report's author, automotive consultant Dennis DesRosiers of Toronto.

Now is not the time to put obstacles in the way of efficient production, especially with long-term demand for motor vehicles leveling off in North America, DesRosiers said in a phone interview from Toronto. Foreign producers will simply set up somewhere else, he said.

"Where you see high content, you see an inefficient auto industry," DesRosiers said, citing countries such as Brazil and Australia.

Concern has been triggered by negotiations toward a North American free-trade agreement covering Canada, the United States and Mexico. Negotiators are reportedly close to agreeing on a 60 percent North American content threshold.

Higher levels, coupled with a Canadian tariff structure that discriminates against overseas companies, could cap investment in new Canadian plants, association president Donald McArthur said.

McArthur noted that Japanese companies with plants in Ontario — Honda, Toyota and Suzuki (in the CAMI joint venture with General Motors) — built plants because the government rebated import duties on parts. But the remission program will be phased out by 1994 as part of the U.S.-Canada Free Trade Agreement.

"Under the free-trade agreement, certain things were traded away that very severely damaged the possibility of continued investment in Canada by these international automobile companies," McArthur said.

"The NAFTA discussions . . . could be neutral for our segment of the industry, could be positive or there could be further deterrence put in the way of investment in Canada."

Besides holding firm on content, the association, which has 16 member companies, wants Canada to cut its 9.2 percent tariff on imported vehicles and parts to the same level as the United States, said McArthur. American duties of 2.5 percent for passenger cars and between zero and 3.1 percent for parts make the United States a more attractive location for new plants, the report says.

DesRosiers said Canadian negotiators at the trade talks know the implications of higher content levels but may agree to them as the price of inclusion in a North American pact. The government is interested in the Mexican market's long-term potential for Canadian exports, but mostly it wants to protect gains Canada made in the 1989 free-trade deal.

The report notes that import auto companies employ 52,000 people in Canada, including 6,000 directly in car manufacturing, and paid-out $1.7 billion Canadian in salaries last year.

VEHICLE PROTECTION SYSTEMS
INTRODUCING NEW PRODUCTS
We are proud to introduce the first fully upgradable security systems, with the following exciting features:
- VPS Security Systems can be pre-installed, then upgraded or downgraded with very little time and expense at time of sale.
- $1,000 product performance guarantee (insurance backed).
- Warranty covering removal, repairs and replacement.
- All point of sale material furnished; brochures, brochure holders, folders and books.
- Product sold only through Distributor and Automotive Dealership Network.
VPS is currently looking for Distributors, nationwide. If you are interested in becoming a Distributor, call Bill Boyles at: 1-800-444-1074

Big 3 to cut emissions at plants in Canada

JEREMY SINEK
Staff Correspondent

TORONTO — The Canadian subsidiaries of the Big 3 and the governments of Canada and Ontario have signed an agreement to voluntarily reduce toxic emissions from auto plants.

The Automotive Manufacturing Pollution Prevention Project echoes a similar project created in the United States last year. That effort involves the EPA, the Motor Vehicle Manufacturers Association and the Michigan Department of Natural Resources.

The Canadian document states that the parties "will voluntarily develop and implement pollution prevention plans" as part of the government's pollution prevention initiative.

The U.S. version defined a list of 65 target substances. The Canadian governments will create their own hit list.

Another difference is that the Canadians have established a joint industry-government task force to define terms of reference, develop an implementation plan, monitor progress and verify reductions. The task force will operate for two years.

G. Yves Landry, president and chief executive of Chrysler Canada and chairman of the Canadian MVMA, said plans call for the United States and Canadian programs to merge "into a true bilateral U.S.-Canada auto sector pollution program having consistent requirements on both sides of the border."

Both programs share a common focus of preventing pollution at the source and will be handled on a plant-by-plant basis.

Environmentalists have criticized the program for lack of specific targets or enforceability. But "flexibility should not be construed as lack of accountability," Landry said.

24 applicants seek electric car grants

WASHINGTON — Federal officials have begun evaluating 24 applications from businesses and government units seeking to share $12 million in grants for development of electric vehicles.

The Federal Transit Administration, part of the Department of Transportation, expects to award the grants by September, said Steven Barsony, director of the administration's Office of Engineering Evaluations. At least three grants will be awarded.

The grants are aimed at speeding development of the zero-emission cars mandated in California beginning in 1998, Barsony said. New York is in the process of adopting similar emission rules. Another 11 Northeast states and the District of Columbia are considering adopting California standards.

The federal grants, to be matched by private or state funds, are also intended to encourage the transfer of defense industry jobs to transportation.

European car sales slide 5.4 percent in May

DIANA T. KURYLKO
Staff Reporter

FRANKFURT — Weighed down by a continuing slide in Germany, European passenger-car sales in May fell 5.4 percent from a year earlier.

The 16.1 percent drop in Germany, Europe's biggest market, dragged down the sales of five of the six biggest European makers.

According to *Automotive News* estimates, May sales in the 17-nation market declined to 1.19 million cars from 1.26 million a year earlier. For the first five months of 1992, sales were 6.29 million, virtually unchanged from last year's 6.27 million.

The 16.1 percent fall in German sales last month was the fifth consecutive year-to-year drop and the biggest of the year. Analysts expect the German market to drop even more dramatically in the coming months.

"When a market hits a peak, it has to weaken sharply," said Edmund Chew, who follows the industry for DRI/Europe.

"We had a few strong months but we should be entering '93 on a strong downward trend."

According to Chew, the decline in German demand will be felt the most by French and Italian marques. Fiat, Renault and Peugeot all posted strong gains in Germany in the post-reunification buying frenzy.

Analysts said that other countries — particularly Italy, Spain, France and the United Kingdom — are not picking up as quickly as expected and are not likely to counterbalance weaker German sales.

Volkswagen AG was the only one of Europe's six top-volume makers to report a sales upturn in May. The company's European sales rose 2.7 percent to 212,200 units, yielding a 17.8 percent share of the 17-nation market.

Although VW is highly dependent on Germany, the popularity of the new Golf limited its decline there to 8 percent. Also in Germany, Ford fell 26 percent; General Motors was down 19 percent; Fiat was off 36 percent; and Renault fell 28 percent.

Throughout Europe, GM sales fell 7.4 percent in May to 143,200. Analysts attributed the decline to GM's heavy reliance on Germany.

GM sales rose 15 percent in Britain, however, pushing the company to 18 percent of that market — only two points behind market-leader Ford.

But Ford sales in all of Europe slid 14.5 percent in May to an estimated 131,600.

Gainers in May included BMW, up 3.5 percent, largely because of the popular new 3 series; Rover, with a 2.1 percent increase; and Volvo, up 8.2 percent.

GMAC

McNamara scandal prompts shakeup

continued from PAGE 1

"He is an outstanding individual and will be missed," said Green. "I don't think it is fair to remove a president unless you can directly tie the problem to the head of the company. I don't think this is the case."

John Rines was promoted to GMAC president and chief operating officer, replacing Lovejoy. He was previously general manager of GM's Motors Holding division.

In December, GM began the internal probe to find out if New York dealer John McNamara, 52, had any inside help. McNamara is accused of bilking GMAC of $436 million in what has been described by federal prosecutors as the biggest "Ponzi scheme" ever perpetrated.

McNamara, who owned McNamara Buick-Pontiac-GMC in Port Jefferson, N.Y., is alleged to have set up a massive phony export operation that evaded detection by GMAC for nearly three years.

All told, GMAC loaned McNamara $4.5 billion since 1988 on vehicles the company believed were being shipped overseas. But the vehicles never existed.

GMAC said that beside holding its officials accountable for their actions, it also is setting up new procedures intended to keep frauds of this type from happening again.

Moreover, a senior executive will be named to fill the newly created position of GMAC vice president for major credit exposures. The executive's responsibility will be to manage unusual financing activities and large accounts, with their corresponding larger risk.

GMAC will beef up its procedures for handling financing activities outside the company's usual business of retail and wholesale financing of vehicles, Barrett said. He said that an internal investigation showed there was no problem with the control and operating procedures used for GMAC's core business.

GMAC is strengthening procedures on vehicles for export, financing for van conversions in inventory and large loans, Barrett said. He would not describe the new procedures, saying they are proprietary.

GM said the new procedures and many retirements and reassignments will not interrupt GMAC's work. The program "will have no impact on GMAC's vigorous extension of credit in its core business activities," the company said.

Although all of the announced retirements were voluntary, they "coincided with the McNamara case," said Terrence Sullivan, newly appointed vice president of corporate communications for GMAC. Sullivan had been manager of media relations for GM.

Most of the GMAC executives declined comment or were on vacation when GM made the announcement Thursday.

Sam Ballou, 47, manager of the Burlington, Vt., branch, is one who will be reassigned. He had been an assistant branch manager at Smithtown, N.Y., which handled the McNamara account.

"I wish life could be easier sometimes and we had crystal balls," Ballou said.

GM also said disciplinary action will be taken against other GMAC executive office employees and "numerous employees" at the Smithtown branch.

The automaker declined comment on how many other employees will be disciplined.

Sullivan said disciplinary actions include demotions, reprimands, salary reductions and reassignments.

Meanwhile, McNamara will forfeit more than $400 million to settle his debts under an order signed by a federal judge in May. McNamara, who did not oppose the order, still faces criminal charges and is the subject of grand jury investigations. He is free on $300 million personal bond.

Rundown of GMAC personnel moves

Here is a list of the personnel moves resulting from the McNamara scandal. People who were disciplined had direct or indirect responsibility for the McNamara account while the alleged fraud occurred.

DISCIPLINED:

- William Lovejoy, 51, president and chief operating officer.
  Status: On special assignment. He turns 52 in September, when he may be eligible for retirement.
- George Fenner, 58, executive vice president and chief financial officer.
  Status: Retiring.
- Gene Whitlinger, 58, executive vice president of GMAC North American Operations.
  Status: On special assignment pending retirement Sept. 1.
- Harry Yergey, 55, area vice president for the Eastern United States and Canada.
  Status: Retiring.
- Peter Van Cott, 56, area vice president for the Western United States (formerly for the Eastern United States and Canada.)
  Status: Retiring.
- Lou Philps, 43, manager of GMAC's Smithtown, N.Y., branch office.
  Status: To be reassigned.
- Marge DeCorso, 52, manager of the Westboro, Mass., branch (former manager of the Smithtown branch).
  Status: To be reassigned.
- Samuel Ballou, 47, manager of the Burlington, Vt., branch (former assistant manager of the Smithtown branch).
  Status: To be reassigned.

APPOINTED:

- John Rines, 44, president and chief operating officer.
  Was: General manager of GM's Service Parts Operations. Earlier jobs included senior financial officer in Brazil and general manager of GM's Motors Holding Division.
- John Finnegan, 43, executive vice president and chief financial officer.
  Was: Assistant treasurer of GM in New York responsible for worldwide banking relations and overseas financing activity. Previous posts include director of GMAC strategic planning in Detroit and vice president of finance for GMAC Mortgage Corp. in Philadelphia.
- John Gibson, 49, group vice president of GMAC North American Operations.
  Was: Investment manager at GM's Motors Holding Division.
- Richard Clout, 43, group vice president of GMAC International Operations. Was: Vice president of International Operations.
- Dieter Nicodemus, 52, vice president for Europe.
  Was: Regional manager for Europe.
- Jack Barrett, 54, GMAC area vice president for the Eastern United States and Canada.
  Was: Director of GMAC corporate communications.
- Terrence Sullivan, 41, vice president of GMAC corporate communications.
  Was: Manager of media relations for GM.
- Henry Davis, 50, area vice president for the Western United States.
  Was: vice president for staff administration for GMAC.
- Joseph Taylor, 49, vice president of staff administration.
  Was: Regional manager for the Atlanta (East) region.
- Joseph McPartlin, 55, vice president for SmartLease and special financing.
  Was: Director of retail leasing.
- Frederick Henderson, 33, group vice president for finance.
  Was: Vice president for finance.
- Robert Folbigg, 55, head of internal audit staff. He has a mandate to expand and upgrade the staff's capability.
  Was: GMAC comptroller.
- Gerald Gross, 51, comptroller.
  Was: Assistant comptroller.
- David Knipper, 50, assistant comptroller.
  Was: Head of GMAC internal audit staff.

LOTUS

Elan two-seater was short-lived

continued from PAGE 1

ish luxury sports car maker and engineering firm. Lotus had hoped to sell 600 of the two-seat Elan convertibles in the United States last year. Only 300 were sold. When the car was conceived, Lotus anticipated worldwide sales of 3,000 a year.

The Elan will continue to be sold in the United States and other markets "for some time" until inventories are exhausted, sources said.

The Elan's demise would leave Lotus' 60 U.S. dealers with only the $87,000 Esprit Turbo SE. Only 150 Esprits were sold last year.

According to sources, Lotus also will announce plans today to freshen the Esprit Turbo.

A Lotus spokesman declined to comment on the Elan's future but said the company will make a "product announcement" today.

"We have a product announcement — a revision of manufacturing plans for the next several years," the spokesman said. "It is not good news, (but) it is not terminally bad news."

Lotus officials will meet with dealers in the United Kingdom this morning, the spokesman said, and U.S. dealers will be informed of developments later today.

The Elans and Esprits remaining in inventories are 1991 models — Lotus skipped the 1992 model year, and had been planning for 1993 model year changes.

GM launches rebates to clear out '92s

ARLENA SAWYERS
Staff Reporter

incentive
WATCH

General Motors has begun its cleanup rebates to clear out 1992 inventory to make way for the 1993s.

With a few exceptions, GM incentives expire Sept. 23, the end of the model year.

Toyota Motor Sales U.S.A. Inc. and Mitsubishi Motor Sales of America Inc. also announced new and/or adjusted incentive programs.

Pontiac's new consumer program includes all 1992 vehicles except LeMans. The incentives range from $500 to $750 and vary by region. Alternate finance rates of 3.9 percent and 6.9 percent are offered instead of rebates.

Most **GMC Truck** customer rebates, which range from $500 to $2,000, expire at the end of the 1992 model year on Sept. 23. Through June 30, the rebate on the 1992 Sierra is $400. In lieu of rebates, 6.9 percent financing is available.

Most of the revised payments to **Oldsmobile, Buick** and **Chevrolet** buyers (*Automotive News*, June 8) also expire Sept. 23, putting them in the cleanup rebate category.

Toyota's new incentive program is based on the dealer's performance against quota.

Dealer incentives range from $700 to $1,500 on the 1992 Corolla; zero to $300 on the 1991 and 1992 Tercel; and $200 to $1,400 on the 1991 and 1992 pickups. Toyota's program expires Aug. 3.

In **Mitsubishi's** Atlanta metro market only, the dealer incentive is $1,750 on the 1991 and 1992 Eclipse and pickup and $1,500 to $1,750 on the 1991 and 1992 Galant. The Atlanta program expires June 30. Elsewhere, Mitsubishi's national program remains in effect until July 6. ■

INCENTIVE WATCH— DEALER INCENTIVES

NEW PROGRAMS	
TOYOTA (expires Aug. 3)	
Tercel (1991-92)	0-$300, quota

Comfy seat belts are a NHTSA project

MAX GATES
Staff Reporter

WASHINGTON — Federal highway safety officials think more people would buckle up if seat belts were more comfortable.

Complaints about ill-fitting belts have increased in recent years, possibly because of greater use or changes in belt design, according to the National Highway Traffic Safety Administration.

Small women seem to have the most problems with poorly fitting belts, the agency said.

"The agency has received a number of reports that safety belts often contact children and shorter adults on the side of the neck and even on the face," NHTSA said in a notice seeking suggestions for improvement.

NHTSA has rejected previous requests for new standards, including a 1990 petition from the consumer group Motor Voters. But the 1991 transportation bill requires the agency to act on new standards by July 1994.

In December 1990, the independent National Transportation Safety Board recommended that manufacturers provide adjustable upper anchorages for the shoulder belt. at a cost about $8 per car. NHTSA liked the idea but has not acted upon it.

Rather than mandate a design for safety belts, NHTSA may create a new test standard, said Barry Felrice, chief of rulemaking. Such a standard might require that safety belts fit comfortably on test dummies representing humans varying in size.

"Manufacturers are playing around with a lot of things. We felt we shouldn't say what they've got to do," Felrice said.

Comments must be filed with NHTSA by July 28. ■

GM seeks rules for day lights

MAX GATES
and ROGER ROWAND
Staff Reporters

Usually, the government imposes safety rules on the auto industry. Now, in a switch, federal rulemakers are answering a General Motors request on daytime running lights.

After rejecting the idea twice before, the National Highway Traffic Safety Administration is about to issue rules on the devices.

The agency won't mandate them. But by issuing rules, NHTSA will permit automakers to install daytime running lights, which are banned in one form or another in about two-thirds of the states. A federal rule would supersede those constraints.

The lights, which generally flick on as soon as a car is started, are intended to make vehicles more conspicuous. Advocates say they reduce crashes at intersections and head-on collisions caused when a passing car moves into the lane of oncoming traffic. Collisions with cyclists and pedestrians are also reduced, studies have indicated.

Sweden, which has required the lights since 1977, has reported an 11 percent reduction in daytime multiple-vehicle accidents, according to James White, head of crash avoidance standards engineering at Transport Canada in Ottawa.

Canada has mandated daytime running lights on new cars since 1989. The country has not yet measured the impact on safety, but it estimates the lights save 120 lives and prevent 11,000 injuries annually, White said.

NHTSA rejected daytime running lights in 1988, saying they don't increase highway safety and in some cases may increase hazards — if most vehicles have the lights, it is harder to spot those that do not. NHTSA also said glare from the lights can bother oncoming drivers.

But two years ago, GM pushed again, saying many of its fleet customers have requested the lights as optional equipment.

Barry Felrice, head of rulemaking at NHTSA, said manufacturers have urged NHTSA to adopt Canada's rules, but he said the agency may choose to put tighter limits on illumination levels to remove the glare problem. A half-dozen different systems are used in Canada.

GM says a national standard permitting optional running light systems would be easier than persuading states to change their laws, a move that would likely result in a patchwork of regulations.

The systems cost $10 to $40 and add $3 to $15 a year to the cost of operating a vehicle. The added costs are mainly bulb replacement and fuel consumption, which increases when alternators run full time to generate electricity for the lights.

GM estimates a fuel economy loss of 0.2 mpg with the daytime lighting. But that loss could be minimized if standardized systems could be installed in all cars, the company said.

The Insurance Institute for Highway Safety proposed NHTSA action permitting the lights in 1987 and, after the idea was rejected, proposed it again in late 1988.

NHTSA expects to have a resolution on the lights ready in August for discussion with concerned parties. ■

Volvo's ads draw humor from politics

RAYMOND SERAFIN
Crain News Service

Volvo is campaigning for car buyers with a series of humorous open letters addressed to major political candidates.

"President Bush, Gov. Clinton, Mr. Perot: Here's our program to preserve family values in America," reads the headline in the first print ad that broke as a spread earlier this month in *The Wall Street Journal*.

"Vice President Quayle: What do you think of these family values?" asks the headline in a spread June 4 in *USA Today*.

Those were the opening shots in a two-month, $10 million-plus campaign touting new consumer incentives on Volvo cars, involving special lease rates or low-interest financing on purchases. Volvo Cars of North America also is offering free maintenance for three years/50,000 miles on vehicles bought or leased through the end of this month.

The campaign will include new print executions and some commercials playing off the political theme scheduled to break on spot TV, said Robert Austin, director of the importer's communications group.

Volvo will run the print ads in major market newspapers and will make the ads available for dealer use.

" 'Family Values' has been in the news a lot during the election campaign, and we wanted to capitalize on that in a tongue-in-cheek manner," Austin said. " 'Family values' is what Volvo is all about."

Ads from Messner Vetere Berger Carey Schmetterer of New York also refer to Volvo's reputation for safety, with features such as anti-lock brakes, driver-side airbag, energy absorbing construction and reinforced steel passenger cage.

Volvo sold 29,598 cars in the first five months of 1992, off 7.9 percent from the same period in 1991.

"Incentives are still driving the market," said Austin, explaining why Volvo decided on the program. "Frankly, consumer confidence is not as high and not as consistent as we'd like to see." AN

Jeep due to drop pickup

GWENDOLYN ZONGHETTI
Special Correspondent

The end of the line for a line of pickup trucks highlighted last week's production news. Chrysler Corp. announced that the Jeep Comanche will be dropped at the end of the 1992 model run.

The Comanche was introduced in 1985, and 164,458 have been sold. However, sales have dropped off in recent years.

Last year, 6,663 Comanches were sold. Sales fell to 3,142 for the 1992 model year to date.

Chrysler said increased demand for the Jeep Cherokee will offset the loss of the Comanche and will keep production and employment steady at the Toledo, Ohio, plant.

Last week's estimated U.S. car production was 128,944, down 5.4 percent from the prior week but up 8.2 percent over 1991.

Year-to-date U.S. car production is 2,661,942, up 6.2 percent over the same point last year.

In Canada, car production was scheduled at 26,557, up 6.2 percent from the prior week but down 9.3 percent from the year-ago week.

Estimated truck production in the United States last week was 96,513, an increase of 8.7 percent over the prior week and 19.7 percent over the same week in 1991.

U.S. truck production so far this year is 1,853,076, an increase of 23.4 percent over 1991.

Canadian truck production was estimated at 21,599 last week, down 3.1 percent from the prior week but up 1.3 percent from the same point last year.

Year-to-date, Canadian truck production of 499,629 tops 1991 by 30.1 percent.

The estimated daily-build rate of cars and trucks produced in the United States and Canada was 54,723 last week, up 0.4 percent from the prior week and 9.3 percent more than the year-ago week.

General Motors ran one shift of overtime last Friday at the Moraine, Ohio, plant.

GM's Oshawa, Ontario, and Scarborough, Ontario, plants worked last Saturday.

The company also scheduled overtime last Friday on the Suburban and Blazer lines at the Janesville, Wis., plant.

Ford Motor Co. slated daily overtime at four car plants and four truck plants last week. The car plants were Wixom, Mich.; Atlanta; Chicago; and St. Thomas, Ontario. The truck plants were Kansas City, Mo.; Louisville, Ky.; Edison, N.J.; and St. Louis.

Ford's Twin Cities (St. Paul, Minn.) plant will be down for 13 weeks beginning June 15 due to extensive retooling for the Ford Ranger.

Chrysler has scheduled daily overtime at three truck plants this week: Warren, Mich.; Jefferson North (Detroit); and St. Louis.

The company ran Saturday overtime at five truck plants last week: Windsor, Ontario; Pillette Road (Windsor); Warren, Mich.; Jefferson North (Detroit,); and St. Louis.

Chrysler's Toledo, Ohio, plant will be down the next three weeks for model changeover. AN

NADA election heats up

SANTA BARBARA, Calif. — For the first time since Ron Tonkin ran for office in 1987, there will be a contested election for the 1993 first vice president of the National Automobile Dealers Association. The winner is a shoo-in for the presidency the following year.

At its mid-year director's meeting, NADA directors nominated two candidates: William Dodge, NADA Region I vice president and owner of Classic Oldsmobile-Cadillac-GMC Truck in Falmouth, Maine; and Daniel Burns, NADA director who owns Dan Burns Oldsmobile in Delray Beach, Fla.

James K. Lust, this year's first vice president, was nominated for president for 1993. He owns Lust Chevrolet-Buick Co. in Aberdeen, S.D.

Five dealers were nominated for secretary: John Daub of Easton, Penn.; Edmund Elbert of Whitmore, Iowa; Ray Shepherd of Fort Scott, Kan.; and Robert Maguire of Bordentown, N.J.

Elections will be held at the October directors meeting in San Antonio.

DeLorean figure gets prison, fine

LONDON — Former Group Lotus Chairman Frederick Bushell was sentenced Friday to three years in prison and fined £2.25 million (about $4.1 million) for his part in a conspiracy that defrauded the DeLorean sports car project of $17.6 million.

Bushell pleaded guilty in Crown Court in Belfast, Northern Ireland, last month to conspiring with former automaker John DeLorean and others, including the Colin Chapman, the late Lotus founder.

The British government last month issued an arrest warrant for DeLorean.

Bushell also was ordered to

Toyota's new U.S. sales leaders, Yale Gieszl, left, and Shinji Sakai, promise to stay the course that has put Toyota on top. "There is a great need in the U.S. market for more of our quality-built American" products, Gieszl says.

Toyota's Gieszl charges ahead

We'll 'do what we do and try to do it better'

DAVID VERSICAL
National Editor

AURORA, Ill. — After two weeks on the job, Toyota sales boss Yale Gieszl has set his tone: Toyota Motor Sales U.S.A. Inc. will continue to grow because Americans want its products.

Last week, Gieszl made his first public appearance in his new role as he helped open a $46 million parts center here. He took advantage of nearly every opportunity to trumpet Toyota's U.S. investments.

MORE ON TOYOTA

Minority-dealer hiring probed > 4
Green light for pickup > 35

And he made it clear that Toyota has no plans to retreat in the face of trade pressure.

Gieszl said:

- The company will introduce six new Toyota and Lexus vehicles in the next 18 months. "That's aggressive," he said. "We'll continue to introduce new products that meet the needs of American consumers."
- Toyota won't alter any product plans for its Lexus Division to

Japan makers scale back on investment

Cutback will mean fewer new models

RICHARD JOHNSON
Staff Reporter

TOKYO — In a quick reaction to a steep slump in sales and profits at home, Japan's carmakers will cut capital spending by nearly 10 percent in their current fiscal year.

The rollback in spending for new plants and equipment is expected to be the first of many over the next several years as Japan's industry learns to make do with less. Precisely how they learn to cope could affect the foundation of the global auto industry, analysts here say.

"Capital spending is the key to the future," said Shinya Iwakura, Honda Motor Co.'s senior product planner. "Those companies that do not have the capability to maintain capital spending will lose the (status) of a so-called international corporation," Iwakura said.

As the cuts take hold, analysts agree, Japan's carmakers will almost certainly build fewer model variations and make wider use of standardized parts. They also are expected to spend less on new foreign manufacturing sites and concentrate on European transplants when they do build plants overseas.

At the same time, the smaller development budgets seem likely to reinforce a move here toward longer product cycles, a move that would take some competitive heat off European and American

Import leaders shiver in Buy American breeze

KRISTINE STIVEN BREESE
Staff Reporter

LOS ANGELES — Even here — amid palm trees, blue skies and 50 percent Japanese car penetration — the Buy American winds are blowing.

That's the word from West Coast auto executives and analysts who gathered last week at a "Motor City West" conference sponsored by the Advertising Club of Los Angeles and J.D. Power and Associates.

The meeting was pitched as a forum to debunk the myth that "Detroit is in the driver's seat of new-car development." But other realities — the closing quality gap, higher prices for Japanese cars and the highly charged political climate — kept surfacing during the five-hour session.

Protectionist sentiments "are always there, underlying in the American psyche," said Richard Recchia, executive vice president of Mitsubishi Motor Sales of America Inc. But they've been stirred up this year because of the presidential campaign and other political issues, he said.

Bill Bruce, general manager of Infiniti Division, said the Buy American sentiment hasn't swept luxury-car buyers — at least not yet. But it will begin to happen as domestic luxury cars near the quality of the Japanese imports, he said.

Mitsubishi's Richard Recchia: Protectionist sentiments "are always there, underlying in the American psyche."

Through May, sales of Japanese luxury brands increased 15.2 percent over 1991. Sales of domestic luxury makes, pulled down by a sharp decline at Lincoln, dropped 5.9 percent. But domestic non-luxury makes improved their share, while Japan's slipped.

American Honda Motor Co. Inc., whose Accord has stumbled this year, has reacted. Earlier this year, its ad agency conducted focus

Frankfurt may lose world-class car show to Berlin

DIANA T. KURYLKO
Staff Reporter

FRANKFURT — The 1991 edition of the Frankfurt auto show, Europe's biggest and most important auto-industry exposition, may have been the last.

According to industry executives, the 1993 edition and succeeding installments are likely to be held in Berlin.

Show organizers and industry executives will meet June 30 to decide whether to move the biennial event back to the old German capital, where it started in 1926. Organizers also will decide whether to recombine passenger cars and commercial vehicles into one event.

Trucks were spun off from the 1991 show, and a separate event was held for them earlier this year in Hanover.

"My requirement is that commercial vehicles and cars be held together as a consolidated event in Berlin," Werner Niefer, Mercedes-Benz AG chairman, said in a recent interview.

"Talks have been held, and (the move) appears to be realistic. Many people hope that the show goes back to Berlin where it started."

The show has been held in Frankfurt since 1951, and occupies a several-square-block exhibition site near the city's down-

pay £100,000 ($185,000) in costs, and was warned that his sentence would be increased to four years in prison if he failed to pay the full fine.

— Edward Lapham

IRS will issue contract rules

The Internal Revenue Service is about to issue new accounting rules for car dealers involving the sale of extended service contracts, says the National Automobile Dealers Association.

Pending those new rules, the IRS ruled Thursday that dealers don't have to submit a Form 3115 by the June 29 deadline unless they are already being audited. The form is used to announce a change in accounting methods, and dealers had been advised to file it to protect themselves from an audit.

"We should have a revenue procedure from the Department of Treasury very shortly," said Peter Kitzmiller, NADA attorney.

He said the expected announcement will establish procedures on how dealers should start accounting for extended service contracts in which they are the principal, and how the IRS will treat dealers who are being audited.

Jaguar ad derby cut to 5 firms

Jaguar Cars has chosen five finalists for its $15 million to $20 million advertising account. They include Ogilvy & Mather, the agency for parent Ford Motor Co.

Others in the running are the incumbent, Geer, DuBois of New York; Carmichael Lynch of Minneapolis; former Mercedes-Benz agency McCaffrey & McCall of New York; and Margeotes Fertitta & Weiss of New York.

Agency executives close to the review say Ford is keeping a close eye on the proceedings. Ford and Jaguar declined to comment on the review.

A decision is expected by early August.

S. Carolina still talking to BMW

Negotiations on a BMW assembly plant went down to the wire last week between BMW AG and South Carolina officials.

Gov. Carroll Campbell and his industrial recruiters are offering a $150 million incentive package of tax breaks and infrastructure improvements.

The State Ports Authority last Wednesday sweetened the pot by offering $5 million in improvements to the port of Charleston, S.C.

Options on land being held for the proposed plant, near the Greenville-Spartanburg Airport, begin to expire this week, The Associated Press said. The options could be renewed, but the deadline lent extra urgency to the negotiations.

BMW's management board could choose the South Carolina site or one proposed by Nebraska. The group meets tomorrow. Its decision would have to be approved by the BMW supervisory board, which is to meet in two weeks.

The plant is expected to begin by assembling complete-knockdown kits from Germany.

Personal videos for Buick stores

Two Buick ad groups are delivering personalized videocassette message about specific dealerships to prospects who call a toll-free number.

Each video includes a two-minute talk by the dealer and 18 minutes of product news.

The program was developed by TechnoFiles and Sherwood Marketing Associates in Trevose, Pa. They plan to offer the program to other Buick and non-Buick dealer groups.

The Buick Dealer Association of Philadelphia, South Jersey & Delaware and the Buick Dealer Association of Lehigh Valley in Pennsylvania began advertising the offer June 18. Dealers pay a licensing fee plus $15 for each video delivered with their message.

Opel dealers get Trans Sport

FRANKFURT — Adam Opel AG, the German subsidiary of General Motors, said last week its 1,300 dealers in Germany will begin selling the U.S.-built Pontiac Trans Sport minivan in January.

The move gives Opel dealers an entry in Europe's fastest growing segment two years before Volkswagen AG and Ford of Europe can bring their jointly developed vehicle to market.

About 1,700 of the minivans have been sold in Germany since late 1990, but through GM dealers. GM said it will allocate 6,000 Trans Sports to Opel dealers next year.

GM to correct fuse data goof

General Motors is recalling 1992 Oldsmobile Custom Cruisers, Buick Roadmaster sedans and wagons and Chevrolet Caprice sedans and wagons because of incorrect fuse information in owner's manuals and on the fuse box.

GM is sending owners of those models an owner's manual insert and a new fuse box label indicating the proper size and location of replacement fuses.

GM did not say how many vehicles are being recalled, but a spokesman said 136 have experienced the problem.

GM said the proper fuses were installed in the cars, but insufficient circuit protection or repeated blown fuses can result if replacement fuses are installed based on the incorrect information.

briefly

'Other' Johnson to leave Japan

Richard Johnson, 59, is retiring from **General Motors** after four years as president of GM Japan. J. Michael Durrie, who has been watching over the U.S. fleet business, will replace him July 1. During Johnson's tenure, GM Japan was born; sales rose; the parts business grew; and GM introduced aggressive advertising. Johnson is not related to the other Richard Johnson in Japan, the *Automotive News* reporter.

MORE DROP TOPS — Look for **Mazda** to chop the top on some 1994 MX-6 sport coupes. That could mean the **Ford** Probe, its sister vehicle from the Flat Rock, Mich., plant, could get a ragtop as well. Mazda produces one convertible, the Miata; Ford has the Mustang and the **Mercury** Capri.

UAW HAND SIGNALS — More than 500 UAW pickets marched in San Diego last week to show solidarity with Caterpillar factory workers who are working without a contract. Union Secretary-Treasurer Bill Casstevens raised his thumb and said, "This thumb's-up sign is for the Caterpillar workers. But it's not the finger of choice for Caterpillar management."

YOUNG IDEAS — Summer design students have two cool classes. In Michigan, the steel industry is financing a Center for Creative Studies project to design three compressed-natural-gas vehicles and their fuel tanks. At California's Art Center College of Design, 22 students will design a **Chevrolet** Corvette for 2010: either a traditional sports car, a super car with NASA-style technology or a New World Corvette that is environmentally responsible.

FLACK HUNT — GM expects to name a PR boss for North American Operations around July 1. Three candidates: Bruce MacDonald (Saturn), Bill O'Neill (Cadillac) or Jim Williams (B-O-C).

GOING AGAIN — Sten Helling, who was once at **AB Volvo** and twice at **Saab Cars USA**, has been spotted at **Mercedes-Benz of North America's** office in Montvale, N.J. Helling, who quit Saab as president last September when the company moved from Connecticut to Atlanta, is expected to be working with Mercedes dealers soon.

DON'T TALK LIKE THAT — Chicago Bears Coach Mike Ditka reps for Chicagoland **Toyota** dealers, so when new bosses came by he offered presents and smooth talk. Here's the story, if not the script: Gives jersey No. 4 to Shinji Sakai, new president of **Toyota Motor Sales U.S.A.** Catches Sakai's mock pass. Says: "We have a quarterback now, so we have to have a kicker." Gives jersey No. 6 to Executive Vice President Yale Gieszl. Thinks he might have insulted the guy. Says: "A kicker means he's all right."

Kicker Yale Gieszl (6), receiver Mike Ditka and passer Shinji Sakai (4) open a Toyota parts warehouse near Chicago.

Chrysler, Ford leaner than Japan, study finds

LINDSAY CHAPPELL
Staff Reporter

A new industry study says Ford Motor Co. and Chrysler Corp. are building cars more efficiently than their super-efficient Japanese arch-rivals.

Despite years of hand-wringing over U.S. disadvantages in manufacturing costs, Ford and Chrysler demonstrate lower direct production costs than the major Japanese carmakers, according to the study. The Big 3 together, including the much higher-cost General Motors, have an average lower cost than the Japanese average, it said.

The study was published last week by Washington-based Economic Strategy Institute, an economic and trade policy group founded by former U.S. trade negotiator Clyde Prestowitz Jr., a critic of Japanese trade policies.

The study notes that comparative manufacturing costs have changed dramatically since a similar study was done in 1982. Study co-author Paul Willen attributed the change in large part to the dollar's devaluation against the yen in the mid-1980s.

The study points out that U.S. carmakers are still weighed down by factors outside the factory, including health-care costs, pension expenses, factory under-utilization and higher-cost capital.

The study estimates that Ford's direct manufacturing costs total $5,415 per small car, and Chrysler's $5,841.

Manufacturing costs at Toyota Motor Corp., the most efficient Japanese carmaker, were $6,216 per small car, the study said.

GM's total production costs weighed in at $7,205 per small car, nearly $1,800 more than Ford's and $379 more than the highest Japanese maker, Mazda Motor Corp.

In the 1982 study, the Japanese average per small car cost was estimated at $4,363, compared to $7,285 for the Big 3.

Labor costs remain higher at the U.S. companies because of greater employee benefits. The Big 3 pay workers an average of $13.22 per hour in benefits. The Japanese automakers pay an average $4.06 per hour in benefits, the study said.

The study concludes that the U.S. automakers continue to lag behind the Japanese in the number of working hours they require to assemble a single car.

The average U.S. company takes 64 man-hours to build a vehicle, including some in-house parts manufacturing, while the average Japanese company takes 42, the study reports.

The study says Washington policy, as much as Detroit management muscle, is required to give U.S. automakers a fair fight with the Japanese. It concludes that the Big 3 have a lingering $400-per-car cost disadvantage due to higher U.S. health-care expenses. It suggests that federal health-care assistance, derived from a "modest excise tax" on auto sales, would help close that gap.

The institute receives funding from about 20 corporations, including Ford and Chrysler.

The study also demonstrates that U.S. carmakers enjoy an average $735 advantage in parts and material costs over the Japanese. U.S. component costs average $3,389 per car, it said, while Japanese costs average $4,124 per car.

Willen said the figures indicate that the U.S. automakers' advantage in direct manufacturing efficiency is diminished by corporate overhead and societal factors beyond the automakers' control.

PRODUCTION COSTS PER UNIT

In addition to labor and parts, total cost includes other manufacturing costs and non-manufacturing costs.

Company	Worker hours	Labor costs	Purchased parts	Total cost
Ford	50	$1,629	$3,066	$5,415
Chrysler	60	1,872	3,150	5,841
Toyota	36	928	4,124	6,216
Honda	40	1,031	4,346	6,618
Nissan	43	1,118	4,346	6,782
Mazda	45	1,161	4,346	6,826
GM	75	2,388	3,677	7,205

Toyota hit for lack of minority dealers

MAX GATES
Staff Reporter

WASHINGTON — Pledging to call every automaker to account, a Congressional committee on fair employment took Toyota Motor Sales U.S.A. Inc. to task last week for its low number of minority dealers.

The owners of Toyota's nearly 1,200 U.S. dealerships include only 11 blacks and 12 Hispanics.

One of the company's regional distributors, the independent Southeast Toyota Distributors Inc. based in Florida, had no black dealers in its 25-year history until April — after the company had been summoned to testify before Congress, according to testimony before the House Subcommittee on Housing and Employment.

"Congress and the American people can expect something more from Toyota, the automaker with the greatest clout, the most profitable and the industry leader in the 1980s and still today," said Rep. Tom Lantos, D-Calif., who has been spearheading investigations into the minority hiring practices and civil rights records of Japanese companies in America.

Rep. John Conyers, D-Mich., said he wants the subcommittee to hear testimony from officials of all domestic and foreign automakers with U.S. dealerships.

Toyota was first because of its prominence and because Southeast Toyota's business practices have been the subject of lawsuits and accusations of racial bias.

Officials of Toyota's U.S. sales arm said that nationwide 2.3 percent of Toyota dealers are minorities. That is better than General Motors and equal to Chrysler Corp.'s record of minority dealers, Toyota officials said.

The head of a black dealers association acknowledged that both Toyota Motor Sales and Southeast Toyota have established minority dealer development programs in recent months. They are the only foreign car companies with such programs, said Robert Hill, executive director of the National Association of Minority Automobile Dealers.

Other witnesses at a seven-hour hearing Thursday recounted racist remarks by Southeast officials about blacks, Jews and Asians. The witnesses, some of whom are suing the distributor, said the company had an unwritten policy to deny dealerships to minorities.

Tony Stromberg, Southeast Toyota's director of market representation, denied those allegations. Stromberg said few dealerships were available during the 1980s, and most were traded in private deals in which Southeast could not legally interfere.

But black businessmen told the committee they believed Southeast Toyota officials had blocked their efforts to buy dealerships.

Chandler Lee, a black man who is now president of a Winston-Salem, N.C., dealership, said he had a verbal agreement with the previous owner to buy a Southern Pines, N.C., multi-franchise dealership in 1986, but learned three days later that the dealership had been sold to another buyer.

Lee said he appealed to GM officials, who exercised their right of first refusal in the transfer of the GM franchises, granting the dealership's GM franchises to Lee. (He subsequently sold that dealership.) But Southeast Toyota officials refused to overturn the sale.

Lee said he then appealed to Toyota Motor Sales officials, but never heard from them.

Toyota officials testified that they couldn't force Southeast to award dealerships to blacks. "We don't have the same right with Southeast as we do with other wholly owned regional distributorships," said Jim Olson, Toyota's vice president for external affairs.

Lotus vows to stay in U.S.

British maker plans new Esprit models

DIANA T. KURYLKO
Staff Reporter

Despite the bitter pill of having to cancel the Elan, Lotus Cars Ltd. says it will not quit the United States. It plans to introduce new versions of the $87,000 Esprit Turbo SE, company executives said last week.

But the new products cannot be launched until Lotus recovers from its expensive mistake with the Elan and returns to profitability, the company said. The front-wheel-drive, two-seat convertible, which went into production in January 1990, cost more than $60 million to develop.

Lotus, a unit of Group Lotus Ltd., which is owned by General Motors, said that in the current economic climate it had little choice but to kill the $40,000 Elan.

"The extraordinary combination of adverse economic factors hitting our segment in key markets has affected profitability of (the Elan) severely," Managing Director Adrian Palmer said. "We have come to the inevitable conclusion that we must end production of the Elan."

The Elan business plan, on which pricing was based, called for producing 3,000 annually. Amid a sharp fall in worldwide demand for luxury sports cars and exotics, however, Lotus produced only 2,238 last year.

Lotus had targeted U.S. sales at 600 a year, but has sold only about 300 since the Elan's U.S. introduction in January 1991. Last week a spokesman said that 400 Elans are in dealer inventories worldwide, and another 100 are on the production line in Hethel, England.

Palmer, who succeeded Michael Kimberley as managing director last October, said in a letter to dealers that the decision to drop Elan was "purely market driven" and was not a commentary on Lotus' commitment to the U.S. market.

"Unfortunately, at these volumes, we cannot manufacture the Elan and deliver it to you at a price that makes it a profitable element of our business," he wrote.

The decision means that Lotus dealers will have only the more expensive Esprit Turbo SE to sell for the next several years. About 150 were sold in the United States last year, Lotus said. The SE is a 3-year-old version of the Esprit, introduced in 1975.

A company spokesman said the Esprit line will be broadened in the next few years, giving dealers more models to sell.

"We want to look to diversify the Esprit upward and downward from where it is now positioned," the spokesman said.

In the meantime, Lotus will stay afloat with revenue from its profitable engineering arm. The engineering and consultancy unit earned more than $50 million last year, Lotus said.

U.S. headquarters remain intact

JIM HENRY
Staff Reporter

Lotus built 545 U.S.-spec Elans.

Lotus Cars USA plans to keep its suburban Atlanta headquarters intact, even though its parent company killed the Elan two-seater last week.

The move leaves Lotus Cars USA and its 60 dealers with only one model, the $87,000 Esprit Turbo SE, which now averages about 10 sales a month in the United States.

The U.S. subsidiary trimmed its already small work force to only 16 people last fall. No further cuts are planned for Lotus Cars USA, said Arnold Johnson, vice president of technical service. "I wouldn't say that's a skeleton crew, but we couldn't operate with too many less."

Rumors suggest that Lotus Cars USA could be somehow combined with its new neighbor and General Motors cousin, Saab Cars USA. Johnson said Saab and Lotus are "exploring ways to save each other money" in America, but he said they don't plan to move in together.

GM owns Group Lotus in Britain and 50 percent of Saab Automobiles AB in Sweden. This spring, Saab Cars USA moved to Norcross, Ga., only a few miles from Lotus Cars USA, in Lawrenceville.

Johnson said there are about 135 unsold Elans in the United States.

He said Lotus built 545 U.S.-specification Elans before the car was killed. Lotus Cars USA sold about 150 Esprit Turbos last year, and 55 so far in 1992.

Two manufacturing execs retiring from Chrysler

MARY CONNELLY
Staff Reporter

Acosta: joined in 1984

Reickert: to be a consultant

Two manufacturing vice presidents at Chrysler Corp. will step down after the company's introduction of its pivotal 1993 mid-sized sedans this fall.

Richard Acosta, vice president of car and truck assembly operations, and Erick Reickert, vice president of powertrain operations, will take special early retirement effective Dec. 31, 1992.

Acosta, 60, joined Chrysler in 1984 after 36 years in staff and plant manufacturing positions with General Motors. Reickert, 56, joined Chrysler in 1984 as director of advance product planning. Reickert plans to establish an automotive consulting company, Chrysler said.

Earlier this month Chrysler announced the planned early retirement of Anthony St. John, 55, vice president of human resources. He retires Aug. 31.

Chrysler has not said how or if it will replace the retiring manufacturing executives. Both men report to Dennis Pawley, who became vice president of manufacturing in April 1991 following the abrupt resignation of Richard Dauch, executive vice president of manufacturing.

The departure of the two manufacturing executives will come after Chrysler launches its crucial trio of mid-sized sedans: the Dodge Intrepid, Eagle Vision and Chrysler Concorde. Production begins this month.

The automaker continues to reduce both its executive corps and salaried work force. The company plans to reduce its bargaining unit and non-bargaining unit salaried headcount by 450 people during calendar 1992. So far, 350 people have accepted early retirement packages offered to those age 55 by Dec. 31 with seven years of service. Chrysler employed 27,000 salaried workers on Dec. 31, 1991, a reduction of 1,300 from a year earlier.

Navistar deal with Steyr

CHICAGO — Navistar International Transportation Corp. signed an agreement to jointly explore worldwide opportunities with Steyr Motorentechnik GmbH using Steyr's diesel engine. Steyr is a vehicle components manufacturer based in Vienna, Austria.

The compact 450-pound diesel engine produces 130 to 180 horsepower. It dovetails with Navistar's own engine line, including the 7.3-liter diesel that makes 150 to 250 hp, which is used in light trucks and vans.

Daniel Ustian, Navistar group vice president and general manager of the engine and foundry group, said the Steyr engine's size and power could make it suitable for large cars and light trucks.

If the two companies establish the engine's potential, they could initially produce more than 100,000 annually for North American and European markets after 1995, according to Navistar.

Caterpillar forms Russian deal

MOSEVILLE, Ill. — Caterpillar Inc. has formed an agreement with Zil, a major Russian medium-truck producer, to explore an industrial and marketing arrangement for diesel truck engines and fuel systems.

Zil produces about 200,000 trucks a year, most with gasoline engines. The Russian manufacturer will soon begin producing 75,000 newly designed Zil trucks and diesel engines.

Metro groups plan trucking parley

WASHINGTON — Trucking and the key role it will play in planning for future transportation systems will be the prime topic at a forum for members of metropolitan planning organizations. The program is scheduled Oct. 28-30 in New Orleans.

Sponsored by the American Trucking Associations, the National Association of Regional Councils and the Federal Highway Administration, the forum will include 150 invited representatives from metropolitan planning organizations.

Under the Intermodal Surface Transportation Efficiency Act of 1991, the planning organizations will make major transportation decisions. The groups have a hand in spending about $151 billion in federal transportation funds through 1997.

Boston show plans '93 savings

BOSTON — The New England Truck Show, slated for May 6-8, 1993, at the Bayside Expo Center, will continue the free delivery policy implemented for exhibitors this year.

To hold down costs, each exhibitor's display materials will be unloaded, carried to a booth, picked up and reloaded at the close of the show free of charge.

Navistar to increase '93 list prices

Hikes should range up to 2.5 percent

JOSEPH BOHN
Truck Editor

Navistar International Transportation will increase list prices on its 1993-model medium and heavy trucks by about 1.5 to 2.5 percent beginning in July.

The industry is generally confident of stronger 1993-model transactions, or "street prices," at least on Class 8 models because of the improving economy. Medium-duty sales have not recovered as quickly as Class 8 sales.

"As the economy turns around, manufacturers can get a little stingier with concessions and demand a stronger deal," said Bob Maines, sales manager for Duthler Ford in Grand Rapids, Mich.

The fleet-oriented dealership does a large sales volume.

Dealers are expecting Ford Motor Co. to raise prices on medium and heavy trucks by 3 to 5 percent.

John Merrifield, Ford Heavy Truck sales manager, had no comment on the reported figures.

He said that providing a precise average of the planned increases was difficult because of new Cummins diesel engines available in Ford medium duties. The engines have created "tremendous price fluctuations" among models, Merrifield said.

He notified dealers that they will be protected against any 1993 model price increases on customer orders placed by July 15.

The price protection applies to trucks ranging from the F-600 up through Ford's 9000 series.

Merrifield said the move was designed to maintain Ford's momentum. The division has been on the upswing in Class 8 sales during calendar 1992.

Ford's 1993 medium duties will feature new Cummins 5.9-liter and 8.3-liter engines; a 19,000-pound rear axle for the Cargo line; air brakes for some of the Low Profile F-600 and 700 series; and anti-lock brakes on the L-series tractors.

Ford also is dropping manual slack adjusters as regular production options and is reviving liquified petroleum gas, or LPG, as an option on trucks with gas engines.

The 1993 Navistar 4000 series will offer anti-lock brakes effective July 1. They are already available on the 8000 series.

As of Jan. 1, 1993, Navistar will replace chlorofluorocarbon in medium and heavy truck air conditioners with environmentally friendly refrigerant HFC-134a.

A smokeless DT-466 210-horsepower diesel becomes available in September, without costly electronic controls or a catalyst.

None of the trucks equipped with International or Spicer manual transmissions and/or rear axles will require 6,000 mile gear lubricant drainage by July.

Reduced maintenance costs result from special magnets in the transmission cases and rear-axle bowls which collect any break-in metal filings or debris in the gear lubricants. AN

May truck sales unable to measure up to busy '91

JOSEPH BOHN
Truck Editor

Class 8 truck orders totaled about 12,000 units in May, down slightly from May 1991's level of 12,559.

May was last year's best month by far and orders then were buoyed to some degree by prebuying to beat announced June price increases.

The slight decline this May was largely due to an unsustainably high order level in April when orders reached 15,203, said Rothschild Inc., a New York investment firm.

Preliminary estimates from Rothschild suggest June orders of about 11,000 units, up about 90 percent from 5,786 in June 1991.

The seasonally adjusted annual order rates for May and June are expected to be in the 140,000 to 150,000 unit range. That's well above last year's average of 95,000 units, Rothschild said.

The investment firm continues to anticipate North American factory sales for calendar 1992 of approximately 120,000 units, up substantially from 106,000 in 1991. Sales for 1993 are expected to exceed 160,000 units.

Sales in all medium and heavy truck segments except Class 7 were up in May, the Motor Vehicle Manufacturers Association said.

Class 8 sales in May totaled 9,600 units, up 16.4 percent from a year earlier. The segment is up 8.1 percent for the first five months of calendar 1992, according to MVMA.

May Class 7 sales totaled 5,206 units, off 21.9 percent. The segment's five-month total of 28,203 was off 12.8 percent from a year ago, according to MVMA.

Freightliner has moved solidly into first place in Class 8 sales. Freightliner retailed 9,991 Class 8 models during the first five months of 1992, compared with 8,694 for Navistar.

Some Navistar dealers believe the sales race is over and have expressed their relief. They say the company will be freer to concentrate on profits, which is considered more important over the long term.

Navistar and Freightliner battled fiercely for first place last year. Navistar won, but the fray drove both to heavy price-cutting.

Freightliner Corp.'s FLD 120 coincidently came out as the top choice of conventional long-haul, over-the-road truckers in an Associates Commercial Corp./*Road King* magazine survey of trucker opinion. The group's top seven picks were all conventionals.

The second most popular single truck in the survey was Peterbilt's conventional; Kenworth's was third. AN

Drivers getting older, paid more

RICHTON PARK, Ill. — The average truck driver is getting older and his income is improving. So is that of owner-operators, according to Associates Commercial Corp./*Road King* magazine's 12th annual survey of trucker opinions.

Some 5,682 truckers responded to the questionaire.

The average income of owner-operators reached $24,110 in 1991, up about $3,000 from a year earlier. Company drivers' incomes rose about $2,000 to $27,050.

Owner-operators made up 35.2 percent of the over-the-road truckers responding to the survey.

The survey also showed that about 52.1 percent of company drivers would consider buying a rig and driving on their own.

Younger adults are not entering the profession in large numbers. Last year's survey showed that the average truck driver's age increased 2.25 years.

The average age of the truckers responding to this year's survey is 42. Only 5.1 percent of those responding were under 25. AN

For Japanese makers in U.S., bigger is better

RICHARD JOHNSON
Staff Reporter

TOKYO — The earnings reports released by Japanese carmakers late last month included both good news and bad news about their U.S. operations.

Nissan Motor Co., the industry's No. 2 producer after Toyota Motor Corp., jolted many analysts here when it reported that U.S. operations boosted its earnings in the fiscal year ended March 31.

But Nissan's affiliate, Fuji Heavy Industries Ltd., said it continues to suffer at the group level because of continuing losses in the United States.

"Judging from their reports, the U.S. profit levels (of Japanese companies) are very low — including the sales operations," said Hitoshi Nishiyama, auto industry analyst at Nomura Research Institute in Tokyo.

But while smaller Japanese carmakers like Fuji and Isuzu Motors Ltd. are struggling to get relatively new transplants into the black, bigger companies with established manufacturing operations are faring better, Nishiyama said.

"At least at Honda, Nissan and Toyota the profit situation (in the United States) is not so bad," he said.

Nissan Vice President Atsushi Muramatsu attributed the company's unexpected 18 percent rise in group pre-tax profit, to 85.7 billion yen ($675 million) in the fiscal year, to improved performance at overseas subsidiaries, especially in Europe and the United States.

At the same time, Nissan said parent company net, a measure of the profitability of Japanese market and export operations, slid 30.7 percent.

Muramatsu, who himself called the company's U.S. financial performance "surprising," attributed the gain to a successful effort to cut costs at the automaker's Smyrna, Tenn., assembly plant. The company also said that selling costs were reduced by lowering incentives and terminating a three-year program offering high-risk auto loans.

Still, one analyst was left incredulous by Nissan's report.

"I can't understand what happened at Nissan (in the United States)," said Ben Moyer, who follows the industry for Merrill-Lynch in Tokyo.

"I haven't come to grips with it. It seems their profitability has improved in the United States, but it also seems to have bucked reality."

Better utilization of local capacity would help the bottom line — but not if extra output ended up in dealer inventories, Moyer said.

"I guess the profits were drained from '93 into '92," he said.

Fuji, meanwhile, attributed its consolidated net loss of 21.6 billion yen (about $170 million) to underperformance at Subaru-Isuzu Automotive Inc., its U.S. manufacturing joint venture in Lafayette, Ind. It also cited poor results at Subaru of America Inc., its U.S. sales arm.

Fuji aims to put the manufacturing operation into the black this year, but analysts say the marketing unit will continue to struggle.

Honda Motor Co. said its improved group operating profit last year stemmed from higher revenue and improved economies of scale resulting from higher North American production.

But Takeshi Sumita, of Honda's finance division, said the U.S. sales arm suffered from higher marketing costs, especially during the Gulf War-related slowdown.

"But we were able to raise the efficiency and profitability of our (North American) production subsidiary so those negative and positive factors offset each other," he said.

Meanwhile, Mitsubishi Motors said that the cost of purchasing 50 percent of the Diamond-Star Motors Corp. plant in Normal, Ill. from Chrysler Corp. had no impact on the company's consolidated balance sheet.

Mitsubishi reported a gain in net profit for the fiscal year — although its operating profit declined.

Like the others, Mitsubishi did not detail financial results for U.S. operations.

But Chairman Toyoo Tate said recently that Diamond-Star was profitable during the 1991 calendar year.

Other companies that issued fiscal year-end financial results last month — Mazda Motor Corp., Suzuki Motor Corp. and Daihatsu Motor Co. — would not discuss U.S. results.

Toyota's financial year ends on June 30, and it is expected to report in August.

CUTBACK

Longer cycles more likely now

continued from PAGE 1

automakers.

The move to longer product cycles is a government and labor union goal aimed at improving the quality of life of Japanese plant workers. The Japanese industry's vaunted four-year product cycle, the shortest in the world, translates into long overtime and high levels of stress for production workers and managers alike.

"The Japanese companies have two options," said Hitoshi Nishiyama, auto industry specialist at Nomura Research Institute in Tokyo. "One is to increase their employees' welfare, and the other is to remain internationally competitive."

But when all is said and done, Nishiyama suggested, "Competitiveness may be the priority."

Until now, the Japanese have never had to cope with a protracted, steep decline in worldwide demand. They have steadily increased capacity, especially in the last three years, as sales soared at home and abroad. Indeed, between 1991 and 1993 they will have added about two million units of new capacity in Japan, the United States and Europe.

According to Nomura, the nine Japanese makers spent a combined $5.8 billion on new plants and equipment in the fiscal year ended March 31, 1985. Including spending by parts suppliers, the industry's investment had nearly trebled, to $16.5 billion, in the fiscal year ended March 31, 1991.

The total fell to an estimated $15.7 billion in the year ending this past March, and will slip to about $14.9 billion in the current fiscal year, Nomura projects.

Nomura expects the downward trend to continue to $12.6 billion in 1995.

Many analysts say the cutback is natural, given the industry's heavy spending in recent years on new capacity in Japan, the United States and Europe.

"Many of the projects are complete, so you would expect capital expenditures to trail off," said Stephen Usher of Kleinwort Benson International in Tokyo. "I don't think it means a deterioration of competitiveness in the short to medium-term."

But Usher cautions that the Japanese, in their new fiscal caution, must not give short shrift to the new green and safety technology that will become essential late in the decade.

"If what we are seeing is two or three years of (spending) consolidation to be followed by another increase in capital spending by the industry, it is no problem," said Usher. "However if Japan remains complacent it will be a problem."

Masayuki Mochizuki of W.I. Carr (Overseas) in Tokyo also points out that Japanese makers cannot afford to slash investment in automation when the government is pressing for shorter work hours.

"They have to invest in rationalization," said Mochizuki.

Nomura's Nishiyama thinks auto executives here may no longer believe wholeheartedly that a parade of new products is the best global market strategy.

"Japanese auto management people seem to be changing their minds after seeing the lack of effect (of new-product blitzes) in cultivating world markets," he said. "All companies are aggressively trying to decrease variations of the same models. For example: a special version for women. We will see this kind of shrinkage over the next several years."

Nissan, for example, plans to cut product and component variations by 30 percent over the next two years. Toyota officials have said they have a similar objective.

"Everybody is doing it," said Mochizuki.

But other factors that reduced capital spending are likely to restrain the flow of new products coming out of Japan in the next few years.

Ben Moyer, of Merrill Lynch in Tokyo, said that Japanese carmakers will not need a lot of new models for the United States because new voluntary restraints have choked off growth prospects there.

"Even if they had the money what would be the advantage of investing in new product in Japan for exports?" asked Moyer. "But they don't have the money anyway."

While the rush of new products from Japan figures to slow, Usher said the Japanese will continue to spend heavily on new product development and technology.

Source: Nomura Research Institute

"They are not going to go to zero," said Usher.

Analysts agree, for example, that the Japanese will not scrimp on their crucial luxury-car divisions. Earlier this year, Mazda Motor Corp. President Yoshihiro Wada said that while capital spending will be lower in the next two years, preparations for the Amati premium-car line remain on course.

Whatever their long-term impact, the spending reductions are likely to be more than a short-term phenomenon.

Toyota is said to be planning to spend about $3.15 billion annually for the next five years, down 20 percent from the previous five-year period, although a spokesman would not confirm the figures.

No. 2 Nissan reportedly has decided to slash capital spending by $770 million over the next three years, to about $5 billion.

Only one company, Fuji Heavy Industries Ltd., the maker of Subarus, is going against the grain of lower capital investment this year. Its capital spending will rise from $224 million to $296 million.

"That may be unavoidable," said Moyer. "These guys had cut back to the bare bones. They are also retooling for a new model."

Nissan's new capital spending budget includes $701 million for new products and technologies, $827 million for plant renovations and upgrading of production facilities, and $362 million on other expenses.

Last year, Nissan spent $677 million on new models and technologies. But in the prior year, ending in March 1991, the total was $1.07 billion.

Of Toyota's $3.8 billion capital budget for the fiscal year ending June 30, about half goes toward new technology and products. Toyota cut its budget from a planned $3.94 billion after the fiscal year began.

Toyota's capital spending for the 1992 calendar year is $3.46 billion, down from $4.5 billion in calendar 1991.

Era of cheap money is over in Japan

JAMES R. CRATE
International Editor

Clear as a muzzle flash in the night, Toyota Motor Corp. signaled to world credit markets last month that the era of cheap money in Japan is over.

Low-cost money has been the rocket fuel behind the rapid expansion of Japan's industrial base in the 1980s, and has provided the country's carmakers with an enormous competitive edge over their global rivals.

Where a U.S. automaker in 1987 might have had to pay 10 percent on a loan to expand capacity or design a new model, for example, Toyota was able to raise money at below 2 percent.

Toyota, Japan's biggest vehicle maker, raised $1 billion in the Eurobond market late last month to redeem $800 million in equity-linked "warrant" bonds that fall due July 22.

The company will pay an interest rate of about 6.78 percent on the bond, which is about the same as any other prime corporate borrower — Japanese or not — pays these days.

In stark contrast, the five-year-old issue Toyota redeemed paid 1.14 percent.

The automaker has another $1.5 billion warrant issue maturing next year. That issue, which carries a 4 percent interest rate, likely will have be rolled over at 7 percent or more.

According to estimates by Japan's Sanwa Bank, Japanese companies will have to roll over $75 billion in equity-linked debt next year alone, while some $186 billion will fall due over the next four years.

Besides Toyota, other automakers facing a crunch in 1993 include Nissan Motor Co., with $1.535 billion falling due; Mitsubishi Motors Corp., with $803 million; and Honda Motor Co., $709 million.

Like the Toyota bond, all of the outstanding debt was meant to pay for itself.

Because each bond carried a warrant entitling the owner to buy shares in the issuing company at a fixed price, the proceeds from issuing new stock should have paid off the original bond.

But because prices on the Tokyo Stock Exchange have collapsed — they are off 56 percent from their 1989 high — virtually all of the debt is "under water," meaning that the exercise price on the warrant is far higher than the company's current stock price.

That means that the stock feature of the original warrant bond is worthless — and obliges issuers like Toyota and Nissan to find the cash at prevailing market rates to redeem the issue.

Aftermarket suppliers court makers

Efforts counter OEMs' encroachment on turf

LINDSAY CHAPPELL
Staff Reporter

Aftermarket suppliers are seeking more contracts to sell original-equipment parts to automakers.

According to some aftermarket parts makers, the push is a response to a counterpush by traditional original-equipment suppliers and the automakers, who want a larger share of the lucrative aftermarket parts business.

"It's obvious to us that the OE manufacturers want the aftermarket business," said Charles Schwartz Jr., chairman and chief executive officer of Champion Parts Inc. of Oakbrook, Ill., a supplier of remanufactured engines and parts. "They haven't made terrific progress in the market, but it's a big growth opportunity for them."

He cited Nippondenso, Hitachi, Robert Bosch Corp. and Lucas Automotive as examples of OE suppliers with strong positions in the replacement-parts market.

Replacement parts for imported vehicles are a fast-growing business. But replacement parts for Japanese imports are traditionally manufactured by the original-equipment suppliers. As a result, most of those parts are imported.

A University of Michigan study last year estimated that U.S. imports of Japanese parts could double to $22 billion a year by 1994, largely because of the growing number of used Japanese-badged cars on the road.

For other U.S. companies, like the one headed by Schwartz, cracking the Japanese OE market is the goal for the 1990s.

"If we can convince the OE manufacturer that there is a way to reduce overhead by dealing with independent suppliers, then there is some opportunity," Schwartz said.

Large U.S. original-equipment suppliers have been hustling for years for a piece of the Japanese transplant market. For many other suppliers, sales opportunities will begin at the ports.

In the past few years, Subaru of America Inc. has begun buying security systems, air conditioners, radios, filters, floor mats and luggage racks from U.S. suppliers for its imported cars. Doris LaMotte, sourcing manager at the company's import purchasing operation in Irvine, Calif., said that winning a contract from Subaru of America can help a firm supply Subaru's U.S. car factory, Subaru-Isuzu Automotive Inc.

LaMotte indicated that aftermarket suppliers could have an advantage over OE suppliers. Some OE suppliers are not able or willing to work with small volumes, short-term forecasts or retail packaging.

"We've had a real challenge with some of these suppliers because they are only used to supplying the factory line," she said.

Abex Friction Products, a brake lining maker based in Winchester, Va., has begun to crack the Japanese OE market. The firm's president, Al Indelicato, said the effort has been strenuous and financially unrewarding — so far. But he said Abex is now strategically positioned for a market that was previously closed to it.

He said the process was much more expensive than planned but has given the company new engineering skills, new process controls, new tooling and introductions to other customers.

Said Indelicato: "I'd call it a huge success." AN

Industry ups magazine ad buys

The automotive industry spent $102.1 million on magazine advertising in May 1992, 33.6 percent more than it spent in May 1991.

Magazine automotive advertising also was up for the year-to-date period.

For January through May 1992, the auto category totaled $422.8 million, a 14.2 percent increase over the year-ago period, according to the Publishers Information Bureau.

A spokeswoman for the bureau attributed the increase to increased confidence in the economy and new model introductions.

Total magazine ad revenue for May 1992 was $624.3 million, up 9.4 percent over May 1991. AN

Mercedes recalls 400E to repair plastic line

MONTVALE, N.J. — Mercedes-Benz of North America is recalling 805 of its 1992-model 400E sedans equipped with ASR traction control to repair a hydraulic line.

Mercedes said the plastic line for the hydraulic unit may be misrouted so that it comes too close to an electrical pre-resistor for the auxiliary cooling fan.

The heat of the pre-resistor can melt the line, allowing hydraulic fluid to drip on the pre-resistor and possibly catch fire.

Mercedes is urging 400E owners not to use air conditioning until inspection so that no power flows to the pre-resistor. AN

Chrysler stays in horse races

Chrysler Corp. will continue its exclusive automotive sponsorship of the thoroughbred racing Triple Crown Challenge through 1995.

The renewal agreement was signed by representatives from Chrysler, ABC Sports and Triple Crown Productions.

The Chrysler Triple Crown Challenge will continue in its current format, awarding $5 million in prize money to the owner of any horse that sweeps the Kentucky Derby, Preakness and Belmont Stakes. If no horse sweeps, the owner of the horse with the highest combined finishes after three races will be awarded $1 million.

Chrysler said the "upscale demographics" associated with the racing events prompted the renewal.

Chrysler also will provide official vehicles to the three races and next year will award a 1993 Chrysler Concorde to either the winning owner, trainer or jockey at each race. AN

Trucks shine as sales edge ahead

JIM HENRY
Staff Reporter

The auto recovery kept crawling along in early June as light-vehicle sales showed a tiny improvement over a relatively strong year-ago period.

Car and light-truck sales totaled 360,351, up 0.9 percent over the 1991 daily selling rate on the strength of a 5.9 percent increase in light trucks. Car sales fell 1.8 percent.

All percentages in this article are based on a comparison of daily sales rates. There were nine selling days in the June 1-10 period this year and eight last year.

So far this year, 10-day sales have been higher than a year ago in 10 of the 16 sales periods.

Last year, relatively strong sales in the June 1-10 period — including a big dose of fleet sales — had some analysts hoping the recovery was at hand. July 1991 was also good, but the hoped-for recovery collapsed by the end of August.

Joseph Phillippi, auto industry analyst for Shearson Lehman Brothers Inc. in New York, said fleet sales had "some impact" on sales this year, but not a "huge ramp-up" like last year.

"The car companies have got religion on program cars," Phillippi said.

Ford Motor Co. showed the biggest improvement of the Big 3, with sales up 7.9 percent, including an 11.7 percent hike in light trucks.

Chrysler Corp. climbed 5.7 percent. Light trucks, including pickups and minivans, jumped about 18.4 percent.

Chrysler's trucks outsold cars nearly 2-to-1.

Automotive News estimates 10-day sales for Chrysler and for most imports.

General Motors, which had a strong period in 1991, fell 2.3 percent, despite a 2.7 percent increase for trucks.

Sales of the Chevy S/T Blazer rose 35.5 percent.

Ford Motor Co. was the only member of the Big 3 to report a car sales increase on a daily rate basis.

Among individual makes of Big 3 cars, Ford, Mercury, Oldsmobile, Pontiac and Saturn posted gains in domestic sales rates.

Sales also were mixed for the Japanese-based companies. American Honda Motor Co. Inc. dropped 2.5 percent, and Nissan Motor Corp. in U.S.A. fell 6.4 percent. But Toyota Motor Sales U.S.A. Inc. rose 2.0 percent. AN

RUSSIA

Japan automakers take first steps

continued from PAGE 3

emerging entrepreneurial elite.

But the Japanese have a special interest in the Russian Far East — Siberia — because of its geographical proximity. Already, executives say, significant numbers of used cars are flowing to the region from Japan, although not in sufficient numbers to guarantee that a robust new-car market will follow quickly.

"Of course, there are no statistics, but when we go there, we see a great number of Japanese used cars," said Takahashi.

However, the cars are not counted as Japanese vehicle exports because they are sold as scrap. Typically, they are priced under 50,000 yen ($400).

But even that market may dry up soon. Nakamura cited "indications" that the Russian government will soon ban imports of right-hand-drive vehicles.

NOT SURE OF THE RULES

The uncertainty surrounding business decisions in the Commonwealth of Independent States is another real obstacle to carving out a market there, executives here agree. To many, the Russian bureaucracy is little different from the former Soviet bureaucracy in issuing arbitrary decisions that are subject to change without notice.

Indeed, Japanese trading companies are growing impatient with the Russians' slowness in paying for past imports. The complaints were heard in May when Japanese Foreign Minister Michio Watanabe met with the heads of several trading company branches in Moscow.

They told Watanabe that business ties may be interrupted if debts are not paid. Japanese companies reportedly are owed $1 billion, and there are unsettling rumors in Moscow that the Russian government is committed to repaying American and European firms first.

THE CHINA EXPERIENCE

Executives hope that the business environment develops during the next 10 years as China has during the last 10.

"We would like to see some similarity because it has been very effective in China," said Nakamura. "We don't know how they are going to establish that sort of framework of business in Russia."

Japan exported about 75,000 cars to China in 1991, only a third of the record achieved in 1984. But exports are expected to increase as China relaxes its trade barriers.

Japanese carmakers began producing cars and trucks with local partners in China in the mid-1980s. Toyota, Suzuki, Daihatsu, Isuzu and Fuji all have manufacturing operations in China. Mazda recently announced a joint venture with the Japanese trading company C. Itoh & Co. and the Hainan provincial government to build small commercial vehicles on the island of Hainan.

In contrast, Japanese makers exported only 10,000 units to the Commonwealth of Independent States last year. But Toyota, which began shipping cars to the Soviet Union in 1988, accounted for 7,177 of the total, up from 4,210 in 1990.

However, Takahashi says the company's shipments are likely to fall sharply this year because of the deterioration of the commonwealth's commercial and banking framework.

"The banking system hasn't been working in the CIS since the end of last year," he said. "That is the main reason. The customers are there and they paid locally, but the money didn't get to Japan for some reason."

Toyota has seven service and parts outlets in the commonwealth. The first was opened in Moscow in October 1990 and the second in Khaborovsk two months later. The most recent was opened in Perm in April.

"Our current plan is to increase those service stations to 10 this year," said Takahashi.

Most are joint ventures between local and Japanese trading companies. For example, the Moscow service station is half-owned by Toyota's affiliate trader, Toyota Tsusho Corp. The Khaborovsk site is partly owned by Nissho Iwai.

Toyota has no equity in the service centers, and Takahashi said there are no plans to do so.

"They are managed and owned by local people, or local companies," he said. "We give technical training, and when they planned and built those service stations we made suggestions."

The facilities are impressive. In Kiev, a 290,520-square-foot workshop houses eight service bays, a parts operation and a car wash and is staffed by four technicians and two body specialists.

Despite plans to set up more service centers, Toyota does not plan to open a corporate office in the Commonwealth of Independent States. That step has been taken so far only by Honda, which says the first goal of its new Moscow office is to gather data.

"The CIS is a very new-world for us," said a Honda spokesman. "We're trying to find out about it. It is very important for us to know a market first-hand. That has been the Honda way."

Honda's partner in the commonwealth, Kanematsu Corp., opened a Honda showroom in Moscow in May 1991. Last October, a second distributor was set up in Moscow, and a showroom/service outlet was opened in Vladivostock.

Honda, which is exporting the Accord and Civic three-door and four-door models to Russia, sent 64 units in 1991. Honda expects to export about 500 cars to Russia this year and says it sold 105 there through the end of April.

But the company is thinking bigger. Russia's Ministry of Automobiles and Agricultural Machinery has suggested motorcycle production in Russia, and Honda is conducting a feasibility study.

OTHERS WADE IN

In March, Mazda Motor Corp. set up sales units in Lithuania and Estonia and may add Latvia soon. A Mazda spokeswoman said the company exported 600 units to Russia in 1991. Suzuki Motor Co. will start exporting next year.

Nissan last year shipped 1,136 vehicles to Russia, down from 2,925 in 1990. Exports in 1989 were 1,482. For the first four months of this year, 446 vehicles were exported to Russia.

Nissan set up a service center in Vladivostock in the Russian Far East last year and has established outlets in St. Petersburg and Moscow in western Russia. Nissan is also considering opening sales units in the three Baltic states.

Nissan plans to set up at least five service workshops in Siberia within two years.

Selling new cars through the service outlets "will depend on how local authorities stimulate joint-venture activities in the coastal area," said Nakamura.

"If they apply the same incentives as in China, each joint venture will be eligible to buy new cars from foreign countries," he said. "Then I think we can expect some new-car demand from that area."

But Japanese executive agree that the emerging entrepreneurial spirit in the Commonwealth of Independent States will help drive the auto industry.

"Yes," said Nakamura. "But it may take 10 years." ■

Retail leasing could be tonic to rejuvenate sales

Importers make aggressive push

CHARLES M. THOMAS
Staff Reporter

More emphasis on retail leasing could help manufacturers reach sales of 15 million units annually by providing lower monthly payments and an alternative to long loan terms for cash-squeezed customers.

Retail leasing has risen dramatically since 1982, when it was just under 3 percent of total retail sales.

Last year, it accounted for 14.3 percent of retail vehicle sales, or about 1.3 million units. In the passenger-car segment, 18.1 percent of total sales were leases, and in trucks, the figure was 8.3 percent.

"Almost two of every 10 car retail sales are leases," said George Reganis, assistant director of leasing for General Motors Acceptance Corp.

"Affordability is driving the industry crazy. Leasing could move the industry and get to the 15 million that we have to have," Reganis said.

High vehicle prices, owners' negative equity in their vehicles and the desire for shorter trading cycles are expected to give leasing a boost.

"Import manufacturers are aggressively pursuing leasing right now," Reganis said. "It is a channel of distribution receiving a lot of attention."

According to Reganis, GM's share of the retail-leasing market is 31.6 percent; Ford Motor Co. accounts for 30.6 percent; and Chrysler Corp. stands at 5.7 percent. Asian automakers have 22.2 percent of the market, and European automakers have 9.9 percent.

Consumers are more likely to lease high-priced vehicles than lower-priced vehicles. Retail leasing in the luxury segment shows the most activity by far. Leasing represents 32 percent of luxury deliveries and 50 percent of deliveries of prestige luxury vehicles like Jaguar and Mercedes-Benz.

Fewer than 10 percent of the Hondas, Nissans and Toyotas delivered are leased, but more than 35 percent of Lexus and BMW models are in that category.

Reganis believes that leasing can provide a way for consumers to break the long trading cycles that have become common in the industry. He blames that situation on the failure of customer incomes to keep pace with new-car prices.

"Customers have been able to purchase more expensive cars primarily by extending loan terms," Reganis said. "The problem with extending terms is that the customer doesn't want to stay in a vehicle 60 months."

But customers can lease a vehicle for 36 months with a lower monthly payment than if they purchased it over 60 months, he said.

For example, a buyer would have a monthly payment of $333.33 for 60 months for a vehicle with a selling price of $15,171.

A retail lease on the same vehicle is $306.66 per month for 36 months. At the end of the lease, the customer returns the vehicle and decides whether to lease or buy a new vehicle.

"Leasing can shorten the term of the trading cycle," said Reganis. "That is important to dealers, customers and manufacturers."

In 1979, the average transaction price of a vehicle was $11,400 with a monthly payment of $283. The median monthly family income was $2,319, which meant the payment represented 12 percent of monthly income. The average new-car loan term was 44 months.

> "Affordability is driving the industry crazy. Leasing could move the industry and get to the 15 million that we have to have."
>
> **GEORGE REGANIS**
> GMAC

According to the National Automobile Dealers Association and the U.S. Department of Commerce, the average transaction price this year is estimated at $17,649 and the monthly payment is $293. The monthly median family income is $2,722 which means the payment as a percent of income is 11 percent. But the average new-car loan term is 63 months.

Customers also have been hurt by relatively flat used-car prices during the past three years. When used-car prices are flat, customers often find themselves "upside-down" — they owe more on their car than it's worth.

Retail consumer leasing is growing most rapidly in the Northeast, which accounted for 25.8 percent of U.S. vehicle sales in 1991. In that region, 17.1 percent of sales were retail leases.

The Southwest accounted for 24.1 percent of retail sales last year, and 18.8 percent of sales in that area were retail leases.

Truck sales account for only 8.3 percent of retail leasing, and most of those are Chrysler minivans, General Motors plastic-bodied minivans and Ford Aerostars. ■

Chevrolet OKs liability arbitration pact

JOSEPH BOHN
Truck Editor

DETROIT — The Recreation Vehicle Industry Association and Chevrolet have agreed to arbitrate any buyer product complaints involving second-stage manufacturers.

The arbitration agreement covers any motor homes or van conversions built on a Chevrolet chassis. It is aimed at speeding up resolution of consumer complaints.

David Humphreys, RVIA president and general counsel, said the association has also had preliminary discussions with Ford Motor Co. and Chrysler Corp. about adopting similar programs.

"I think they're interested, and we just have to go forward with the process," Humphreys said.

Product disputes between an RV buyer, RV manufacturer and Chevrolet are infrequent, but they can involve large dollar amounts, said Jim Green, Chevrolet assistant RV manager.

"You could have a $50,000 issue. If to satisfy a customer's needs, we buy a $100,000 motor home back, and our chassis was $16,000 of that, that's a little lopsided," Green said.

The real thrust of the agreement is to get customers back on the road quickly after they have a problem with an RV, letting the manufacturers decide later whose warranty should cover it.

"With this agreement, we expect the warranty claim to be approved immediately by either the chassis or motor home manufacturer," Humphreys said.

RVIA will administer the program once an RV company or Chevrolet file a petition for arbitration. A panel of three arbitrators will handle the dispute.

The arbitration agreement is voluntary. But once the RV firm and Chevrolet both agree to arbitrate the claim, the panel's decision will be binding. The agreement excludes personal injury claims.

The arbitration panel must issue a decision within 30 days after the conclusion of a hearing or the submission of written comments, whichever is later.

RV sales are on the rebound

Recreational vehicle sales, which tend to be a harbinger of economic trends, were up strongly in the first quarter, according to the Recreational Vehicle Industry Association.

Wholesale industry shipments rose 55 percent and retail sales were up 20 percent, RVIA said.

David Humphreys, the association's president and general counsel, predicted sales would be up at least 15 percent incalendar 1992, reaching $8 billion.

RV sales have outpaced the economy as a whole for the past three years, RVIA reported.

GM sticks with glue for F-car roof assembly

Adhesive bonding goes beyond trim

JACK KEEBLER
Staff Reporter

GM will glue on the roofs of the mostly plastic 1993 F-cars: the Chevrolet Camaro, pictured, and the Pontiac Firebird.

General Motors will glue on the roof of the mostly plastic 1993 Firebird and Camaro.

But that is no surprise. Automakers have been using adhesive bonding for more than a decade, and not just on carpets, mirrors, windshields and trim.

In fact, the current-generation all-steel F-car has a glued-on roof. Engineers find that a single-component epoxy used along panel edges greatly enhances the car's body rigidity.

"We use them on the T-top cars at our Van Nuys, Calif., plant," says S. Norm Kaharala, a staff project engineer with the advanced engineering group at GM. "We use the adhesives to stiffen the car. They're applied around the frame and in various locations."

Kaharala said GM has been using the adhesives for at least 10 years. Most applications are for panel-to-frame bonding. He said the adhesives also can help reduce the number of spot welds required on a panel.

"It's good for stress distribution," he said. "And it also fills gaps and acts as sealant on many of the models."

Many of the exterior body panels of the 1993 F-cars are plastic; the panels include the inner and outer doors, roof, front fenders, and front and rear fascias. But most of these are bolted to the steel subframe, not glued. That is unlike GM's front-wheel-drive minivans, where a two-part urethane adhesive holds the semi-structural plastic body panels on the steel subframe.

"We've been using those for about three years without any problems," he said.

From an environmental perspective, Kaharala said that the adhesives can be a problem when used on plastics. They can "contaminate" the plastics. But he said they are not a recycling problem on steels.

"For the shredder, they are just a dust," he said. "And when the steel is reheated to be recast, the plastic simply adds an additional heating value."

Welding will continue to be the primary method for fastening metal body panels together. Adhesives function best on metal sheet when they are used in conjunction with welding or threaded fasteners.

But engineers and customers in the 1990s are becoming much more aware of body rigidity.

And adhesives can make large difference by spreading the fastening loads across the entire edge of the plastic or steel panels.

Chrysler Corp. also has been taking advantage of structural adhesives.

, a supervisor of materials joining with the materials engineering group, said the company has been using the adhesives since 1982 on virtually all of its vehicles.

"We probably lead the industry on their use," he said. "We got into them early because we got into the anti-corrosion technology earlier than others.

"But mostly we use it as an anti-flutter material," he added. "We use it to attach door beams to the outer skins and on hood inners and outer panels."

Jud said adhesives use may have peaked. Basically used to augment spot welds, he said it is more expensive than welding.

"You need to be able to prove the advantage," he said. "It must be a significant sound advantage or sound damping to have it."

Jud said that Chrysler uses a slightly different approach to curing the adhesives used in doors. The company uses an "induction" curing process that puts a magnetic field through the steel for 5 seconds to achieve handling strength.

Adhesives let engineers choose variety of materials

There are two types of adhesives: thermosets and thermoplastics.

Thermosets include epoxies, urethanes, acrylics, cyanoacrylates and anaerobics.

Thermoplastics include: vinyl plastisols and hot melts.

Thermoplastics have the advantage of being able to be remelted and reused.

There are many advantages to the use of adhesives. First, dissimilar sheet products can be easily and strongly joined together. So engineers have an expanded range of materials choices.

Second, on steel sheet bonded with adhesives, the properties of the steel or possible coatings on the steel are not altered.

Finally, one of the biggest advantages for body engineers is even stress distribution across the entire edge of the bonded sheets. This provides greater body rigidity and seals out moisture. It also reduces vibration and noise.

One of the problems with adhesives is curing time.

Engineers describe the hardening process as having two stages.

The first is "handling" strength. That allows the worker to manipulate a piece on the line.

The other is stage "finish" strength that occurs after the adhesive has been heated — up to 300 degrees Fahrenheit — in the paint oven.

NHTSA crash tests find risk high for Vigor, Ram

MAX GATES
Staff Reporter

WASHINGTON — Passengers in the Acura Vigor sedan and the Dodge Ram van are at risk of head and chest injuries, according to the government's consumer crash test program.

Crash results for five other newly tested models showed that driver and front-seat passengers were unlikely to suffer serious head or chest injuries. The vehicles are the Honda Accord sedan, Ford Aerostar minivan, Volvo 240 sedan, Mitsubishi Mighty Max pickup and Cadillac Seville sedan.

The cars were subjected to a 35-mph frontal collision into a barrier for the New Car Assessment Program conducted by the National Highway Traffic Safety Administration. The program's crash test is 5 mph faster than the government's safety compliance requirement for all new vehicles sold in the United States.

The Acura Vigor registered a passenger side head injury score of 1,192. A score of 1,000 or above indicates serious head injury is possible. The Vigor also registered a driver chest-injury score of 66. A score of 60 or above indicates chest injury is possible.

For the full-sized Dodge Ram van, the driver head-injury score was 1,392, the passenger head-injury score was 1,113 and the driver chest-injury score was 66. All scores were above the level at which injury is possible, NHTSA reported.

In addition, the Dodge Ram registered a femur load score of 2,402 for the driver's left leg. That is above the level at which leg injury would be possible.

The Volvo 240 registered a driver head-injury score of 282, the lowest of any 1992 model-year vehicle tested so far under the New Car Assessment Program, NHTSA said.

1992 NEW CAR ASSESSMENT RESULTS

		Head injury*		Chest injury**	
Vehicle	Type of restraint	Driver	Passenger	Driver	Passenger
Acura Vigor	driver airbag	914	1,192	66	50
Cadillac Seville	driver airbag	598	900	46	42
Dodge Ram	manual belts	1,392	1,113	66	54
Ford Aerostar	driver airbag	485	723	51	57
Honda Accord sedan	driver airbag	501	558	51	45
Mitsubishi Mighty Max	manual belts	980	777	48	53
Volvo 240	driver airbag	282	835	37	39

*Scores of 1,000 or more indicate injury is possible.
**Scores of 60 or above indicate injury is possible.

Chrysler may extend minivan spiff

JOSEPH BOHN
Staff Reporter

Chrysler Corp. may bow to dealers' wishes and extend its customer rebates on minivans.

The company drew an angry response from dealers last week when it announced that the $500 rebates and $50 salesperson incentives on 1992 minivans would end June 22.

Chrysler Corp. officials were working on a new program late last week. An announcement is expected this week.

Chrysler did extend individual equipment discounts on such minivan options as child safety seats, sunscreen glass, quad seats and anti-lock brake systems, which were all part of its "First National Minivan Sale."

Those option discounts were scheduled to end June 22 but now are being extended through Aug. 31.

The announcement to end minivan rebates surprised dealers. Chrysler previously said it would run incentives on a quarter-to-quarter basis to help dealers in their planning.

The automaker's dealers had anticipated that the minivan rebates would run through the end of June or longer.

"The rebates have been on so long we never expected them to end," said Jim Clark, vice president of Armory Garage in Albany, N.Y. Armory, one of the oldest Chrysler-Plymouth dealerships. He has 80 minivans in stock.

Lochmore Chrysler-Plymouth in Detroit also stocked up on minivans, owner Gus Russo said.

Russo, national chairman of the Chrysler-Plymouth Dealer Council, said the council was "adamant" in trying to stop Chrysler from ending the rebates.

"But they said they wanted to decrease incentives," Russo said.

Frank Galeana, owner of Van Dyke Dodge in Warren, Mich., and national chairman of the Dodge Dealer Council, also expressed consternation.

"I gambled this program would continue. We have over 100 minivans in stock in our Florida store," said Galeana.

"I'm concerned they're pulling the plug on rebates. It will slow sales down. The question is, "How long?" ■

GM expands Protection Plan to older cars

JOSEPH BOHN
Staff Reporter

General Motors is making its GM Protection Plan service contract available to vehicles up to 3 years old, effective today.

The service contract previously had been limited to vehicles operated for less than 18 months or 18,000 miles.

For 1989 to 1991 models, GM had 36-month/50,000-mile bumper-to-bumper warranties. With 1992 models, it switched to a 36-month/36,000-mile warranty.

The plan is available only on General Motors vehicles through GM's franchised dealers, according to Bill Dailey, marketing coordinator for Motors Insurance Corp.'s Mechanical Products Department in Detroit.

The GM Protection Plan can be purchased for new or used cars. On new cars, it offers some services not in the standard warranty, such as rental car coverage. It provides full mechanical coverage once the basic factory warranty runs out.

The plan can provide coverage for a period of up to 72 months/100,000 miles, Dailey said. It has 10 different time/mileage options.

The suggested retail price starts at $370 for 36-month/50,000-mile coverage on a Chevrolet Corsica with no deductible. The suggested retail cost is $1,355 for a 72-month/100,000-mile plan with no deductible for the same car.

The optional service plan gives high-mileage drivers 14,000 more miles than provided in the factory warranty that comes with the car. ■

Overtime heavy in buildout

GWENDOLYN ZONGHETTI
Special Correspondent

Despite the onset of the model changeover season, the Big 3 scheduled overtime at 10 truck and eight car plants last week.

In the same week last year, three plants were idle for model changeover, and one was idle due to slow sales and high inventories.

For the year to date, car and truck production in the United States and Canada is 5,759,717, up 11.8 percent over the 5,151,569 produced at this point a year ago.

The Diamond-Star Motors plant in Normal, Ill., has discontinued production of the Eagle Summit and Mitsubishi Mirage. The plant will continue to build the Eagle Talon, Mitsubishi Eclipse and Plymouth Laser.

In Canada, calendar-year car and truck production reached 1 million last Tuesday, three weeks ahead of last year.

Estimated U.S. car production last week was 133,314, up 2.3 percent from the prior week and up 13.7 percent over last year.

Year-to-date car production in the United States is 2,796,665, up 6.8 percent over 1991.

Canadian plants assembled an estimated 26,120 cars last week, down 1.6 percent from the prior week, and 8.2 percent below 1991.

So far this year, Canadian car production is estimated at 510,148, down 5.8 percent.

In the United States, 86,611 trucks were built last week, down 1.9 percent from the prior week but up 2.9 percent over last year.

U.S. truck production so far this year is estimated at 1,931,456, up 21.8 percent from 1991.

In Canada, 21,863 trucks were built last week, up 1.4 percent from the prior week and 2.4 percent from the year-ago week.

Year-to-date truck production in Canada is 521,448, up 28.5 percent.

Last week's estimated daily build rate of cars and trucks in the United States and Canada was 53,582, up 0.4 percent over the prior week and 6.6 percent over the year-ago week.

General Motors scheduled Saturday overtime last week at three car plants: Wentzville, Mo.; Lansing, Mich. (C Plant); and Wilmington, Del.

In Ontario, GM's Oshawa and Scarborough truck plants also worked overtime last Saturday.

The company's Moraine, Ohio, and Janesville, Wis., plants worked daily overtime last week.

Ford Motor Co. slated daily overtime at four car plants (Wixom, Mich.; Atlanta; Chicago; and St. Thomas, Ontario) and three truck plants (Kansas City, Mo.; Louisville, Ky.; and St. Louis.)

Chrysler Corp. worked Saturday overtime last week and has scheduled daily overtime this week at three truck plants: St. Louis; Warren, Mich.; and Jefferson North (Detroit).

Chrysler's Sterling Heights, Mich., car plant worked last Saturday and will work daily overtime this week. ■

U.S. plant puts BMW in a new world

Special convertible may be 1st model

JAMES R. CRATE
International Editor

Even for Karl Gerlinger, the relentlessly enthusiastic chief of BMW AG's U.S. sales arm, the luxury-car maker's announcement last week that it will start building cars in South Carolina in 1995 represents a roll of the dice.

As expected, BMW said it will invest about $300 million in a greenfield plant in Greer, S.C., to build an unspecified new model beginning in 1995. The plant, with a projected capacity of 60,000 to 70,000 cars a year by 2000, will produce for both the U.S. market and for export, BMW said.

Aside from a small kit-car operation in South Africa, it will be BMW's first assembly plant outside Germany.

Although officials declined all comment on the new car, supplier sources said it likely will be a distinctly new convertible based on the current 3 series, with a roadster offshoot possible. BMW sources in Munich also ruled out a sport-utility or a minivan.

JOE WILSSENS/AUTOMOTIVE NEWS

BMW comes to America: Making the announcement in Dearborn, Mich., were Karl Gerlinger, left, president of BMW of North America; Helmut Panke, BMW AG's corporate planning director; and Bernd Pischetsrieder, manufacturing director.

"Yes, this is a highly risky move," Gerlinger said in Dearborn, Mich., last week. "But the U.S. market demands that you take risks to achieve anything worthwhile. If you are not prepared to gamble to seize an opportunity here, you might as well stay home."

The risk, of course, is that Bimmer buyers may consider a U.S.-made model to be *ersatz*, and shun it, or that quality will not be up to the company's fabled standards.

South Carolina is a surprising fit for BMW

LINDSAY CHAPPELL
Staff Reporter

GREENVILLE, S.C. — Bratwurst and Bavarian cabbage was the lunch special at the local Marriott Hotel last Tuesday, after BMW AG announced it will build a $300 million auto plant two miles away.

It was not the usual fare in a Southern town that King Cotton built.

But then again, who would ever have thought that South Carolina would be producing cars? And that BMW would build them?

But for the independent-minded German automaker, the Greenville area is a natural. And in many ways, BMW will feel right at home.

Where else would a German firm find a small U.S. city with no traffic congestion but with 58 other German manufacturers in the area. British, French, Dutch, Belgian and Italian manufacturers have 89 more plants nearby. Yet Greenville's airport doesn't even offer international air service.

As part of the BMW deal, the airport will have to extend its runways to accommodate the trans-

late news

Subaru sets new ad theme

NEW YORK — Subaru of America and its ad agency, Wieden & Kennedy, will unveil a new ad campaign this week, coming soon to print and broadcast media.

The campaign is phase two of Wieden & Kennedy's tongue-in-cheek "What to Drive" campaign making fun of status-seekers.

The agency describes Subaru's target buyers of the 1990s as "role-relaxed," or comfortable with themselves, as opposed to the stereotypical, grasping Yuppie of the 1980s.

Pontiac excitement is for real nowadays

PHIL FRAME
Staff Reporter

With sales up for five of the seven vehicles in Pontiac's lineup and market share on the rise, the excitement is back in General Motors' "excitement division."

Pontiac's car and truck sales for the calendar year through May were up 11.5 percent, while the market as a whole was up 3.9 percent. That boosted Pontiac's share to 4.8 percent, up from 4.3 percent for the same period a year ago.

In May, Pontiac had 5.2 percent of the car and light-truck market.

"Dealers are telling us they want more cars, which I haven't heard since I came back to Pontiac in June 1989," said General Manager John Middlebrook. Middlebrook worked at Pontiac from 1979 to 1981 and from 1983 to 1985.

"Dealers are feeling better," he said. "They're seeing more people in the showroom, (including) import owners and import intenders."

Dealers say they are enthusiastic about recent sales and their prospects for the rest of 1992.

"I'm really excited about the second half of the year," said Garry Warner, president of Warner Pontiac-Oldsmobile-GMC Truck Inc. in St. Louis. "In my dealership, we're having the best Pontiac month we've had this year."

JIM FRENAK

Through June 20, Grand Am sales were up 29.3 percent for the year.

Commission dumps on Big 3

MAX GATES
Staff Reporter

WASHINGTON — For a while last Wednesday, the Big 3 had their target in the crosshairs.

They had worked the House hearing room hard that morning. Then the Ways and Means Committee voted to raise duties on most Japanese — but not European — minivans and four-door sport-utilities from 2.5 percent to 25 percent.

The tariff bill amendment would add $3,000 or more to the price of their Japanese competitors' products. Big 3 lobbyists celebrated with hugs and handshakes. But four hours later, their smiles turned upside down.

In a 4-2 vote that caught just about everyone by surprise, the International Trade Commission shot down the Big 3's minivan dumping case against Toyota and Mazda. The ITC commissioners said they found no evidence that the Big 3 had been hurt by Japanese dumping practices.

With the vote, the Japanese importers will escape duties that could have added $2,000 or more to the price of new Toyota Previas and Mazda MPVs.

And more critically, the Japanese can breathe easier about the prospect of a dumping complaint against their luxury cars. Ford Motor Co. Chairman Harold Poling has mentioned the possibility. And, notes GM spokesman William Noack, "there is concern generally in the industry" that the Japanese are underpricing the cars to gain market share.

The minivan decision shook Thomas Hanna, president of the Motor Vehicle Manufacturers Association, who had led the Big 3 charge for more than a year. Hanna, struggling for an explanation in the moments after the vote, called it "preposterous," "astonishing" and "peculiar."

Said Hanna, "We've been told by an agency of the U.S. government to drop dead."

The Big 3 thought they would win. Last December, the Commerce Department issued a preliminary ruling that the Japanese were dumping their minivans at 0.95 percent to 7.19 percent below fair market value. After several trips to Japan to look at company books, Commerce investigators raised the dumping margins

corrections

The following are from the 1992 Market Data Book:

- In the Page 13 Production section, the markets for the Ford Escort and Mercury Tracer built in Hermosillo, Mexico are incorrect. Both cars are built there for the United States and Canada.
- On Pages 92 and 105, the Mazda MX-6 is incorrectly represented. This model is available only as a two-door notchback.
- In the Equipment section on Page 92, the last four categories for U.S. domestic-built car body type/roof installations should read as follows: electric slide sunroof; pop-up sunroof; vinyl roof; T-roof.
- In the Dealers section, locations of three dealerships were listed incorrectly. American Chevrolet-Geo is in Modesto, Calif. North Star Dodge Center Inc. is in Brocklyn Center, Minn. Luke Potter Dodge Inc. is in Winter Park, Fla.
- The principal/owner of a top 10 Mercedes-Benz franchise is listed incorrectly on Page 118. John C. Brockway owns Bill Ussery Motors in Coral Gables, Fla.
- In the annual world vehicle production and assembly chart on Page 3, the "other" column incorrectly listed vehicles produced outside the major vehicle-producing countries. It should be replaced with the following:

Year	Other
1991	4,100,445
1990	4,376,212
1989	1,246,856
1988	2,297,775

Ford-VW minivan for Europe

Ford and Volkswagen are preparing to enter the hot minivan market in Europe with a jointly developed people carrier expected for the 1994 model year. Each maker's version will have a distinct body style; this artist's retouching of a spy shot of prototypes shows one possibility. The seven-seat van is based on a stretched-wheelbase VW Passat. A joint-venture assembly plant is being built in Portugal, with annual production of 180,000 planned.

NHTSA probes Blazer/Jimmy

WASHINGTON — The government has intensified its look into possible fuel injection problems that have been blamed for 35 accidents involving Chevrolet S10 Blazers and GMC Jimmys.

The National Highway Traffic Safety Administration said it has recorded 525 complaints of over-acceleration on starting and engine surges during deceleration and stopping. Three injuries and one death have been blamed on the alleged problem.

The investigation covers more than 850,000 vehicles with 4.3-liter V-6 engines with throttle-body injection from the 1989-91 model years.

NHTSA has also upgraded its investigations of fuel tank leaks in the 1985-87 Audi 4000 and Coupe GT and in 1987-90 Jeep Wranglers. The agency has also granted a petition filed by the Center for Auto Safety for investigating power door lock failures in 1987-91 Toyota Camrys.

— Max Gates

Belts, airbags save more lives

WASHINGTON — A National Highway Traffic Safety Administration report says the number of lives saved by the use of airbags and automatic belts has increased.

NHTSA said the risk of fatality for front seat occupants in cars with airbags is 23 percent lower than in cars with manual belts — at 1983 usage rates.

NHTSA said it used 1983 as a base because it was the year prior to a concerted effort to raise belt use.

The fatality rate is 16 percent lower in cars equipped with motorized belts than non-motorized belts.

Ford licenses casting process

Ford Motor Co. will license a British manufacturing process for an aluminum casting plant under construction in Windsor, Ontario.

The plant, to become operational in 1993, will manufacture complex multi-valve cylinder heads for either the modular V-8 engine built in Romeo, Mich., or a modular V-6 to be built in Cleveland.

For the Windsor plant, Ford is licensing casting technology from Cosworth Engineering of Britain.

— William R. Diem

Ford recalls 34,700 cars

DEARBORN, Mich. — Ford Motor Co. is recalling 26,500 1990 and 1991 Crown Victoria police cars and 8,200 1991 Escort GT and Tracer LTS.

Ford said the rear brake lines on Crown Victoria police cars with the 5.8-liter V-8 engine may rub against the car body, causing fluid loss. Owners may experience increased pedal effort.

Ford is recalling the Escort GT and Tracer LTS equipped with manual transmissions to inspect the speedometer assembly. About 2,500 of the vehicles may have speed sensors without ball seals. Transmission fluid may leak through the assembly onto the vehicle floor.

Alfa recalls 1,800 Spyders

ORLANDO, Fla. — Alfa Romeo Distributors of North America has recalled 1,800 of its 1991 and 1992 Spyder convertibles to fix an electrical problem.

The company said an electrical short circuit could develop inside the map light in the glove compartment. Dealers will replace the map light and bracket.

Dealer profits move upward

March was profitable for car dealers. The average dealership pretax profit of 1.9 percent of sales was nearly double the average of the past three years.

The higher profit margin was accompanied by a 7 percent increase in dollar sales for the month. The average dealership earned more than half of its first-quarter profit in March, according to the National Automobile Dealers Association.

NADA's quarterly survey showed that 19 percent of all dealerships operated at a loss in the first quarter of 1992, compared to 42 percent reporting losses for the same time period in 1991.

— Charles M. Thomas

Ford denies secret warranty

DETROIT — A consumer group in Washington wants Ford Motor Co. to notify all owners of F-series trucks that the vehicles may have defects that cause the paint to prematurely peel.

The Center for Auto Safety claims that Ford has known about the problem for years and has repainted some trucks under secret warranties. The groups wants the Federal Trade Commission to order Ford to notify owners of the alleged paint problems and, if necessary, repaint the vehicles.

Ford admitted it has had problems in a small percentage of certain colors on F-series trucks, but denied it has a secret warranty.

Earlier this year, Ford initiated a customer service program for F-series owners and asked those owners to detail any problems they may be having with their trucks.

— The Associated Press

briefly

Washington is 1st on Lee's list

He's fathered the Mustang. Refurbished the Statue of Liberty. Written two best sellers. Plucked **Chrysler** from the jaws of bankruptcy. But none of those is Lee Iacocca's shining moment. The Chrysler chairman told a Detroit television audience that the proudest moment of his career was in July 1983 at the National Press Club in Washington. That's when Chrysler repaid its $1.2 billion federally-guaranteed loan seven years early. Said our hero: "I'm giving them a check for $1.2 billion seven years early and they didn't know what the hell to do with it because nobody ever paid off a loan down there, and it stunned them."

Lido: recalls payback

NEVER SATISFIED — When Michael Andretti finally won a 1992 Indycar race (Portland), his team sent a fax to Cosworth Engineering in England, which builds the **Ford**-Cosworth powerplants. "Sorry it took so long," said the team. "When's the next 20 hp coming?"

OLD HABITS — Auto suppliers like ITT Automotive would like the industry to choose one way of measuring supplier quality. A task force is working on the idea, but ITT executive Chuck Peters says lower-level industry people are dragging their feet. His explanation: "Turf protection is older than our industry."

THEY SAID GOO GOO — Children who have neither driven a Ford lately, nor are old enough to drive one, may one day become focus group fodder for **Ford Division**. In its quest to find out how much kids influence their parents' vehicle purchases and to gauge its future market, Ford may someday focus on children as young as 10, said division ad manager John Vanderzee. But for the time being, he said, "we will do some focus groups down to age 16 — and perhaps talk to 15-year-olds."

WASHINGTON CALLING — The nation's capital is calling the Motor Vehicle Manufacturers Association's director of communications. "The biggest task will be relocating files," said Gene McKinney, who has run the communications staff from MVMA's Detroit office, but this week moves to Washington, D.C. MVMA's library and photo section, which also report to McKinney, will remain in Detroit.

LISTENING, ROSS? Listen up, Ross Perot. Lee Iacocca, one-time possible presidential contender, says businessmen may not have the right temperament for the Oval Office. "I think I would make a lousy president," he said in a TV interview. "We (businessmen) are in a world of making decisions and seeing the results of those decisions. We're results oriented. Businessmen like to say, 'Let's do this. There might be some risk involved, but let's stand by our guns here and go do it.' But the political system is like dealing in molasses. I think it's very difficult to make the transition, frankly."

Perot: wrong temperament?

Opel braces for another earnings slide

High costs in Germany, Saab subsidiary blamed

DIANA T. KURYLKO
Staff Reporter

FRANKFURT — The petals are beginning to drop off General Motors' European rose, the German Adam Opel AG subsidiary.

With the German market returning to normal, Opel expects 1992 earnings to drop below 1991 levels of $698 million (1.075 billion German marks). Last year's earnings were off 19 percent from 1990's $861 million, although sales in 1991 were up 14.5 percent to $17.63 billion.

Opel's margins on cars sold in Germany are considerably higher because exporting adds extra costs, said Gail Gunderson, finance director, at the company's annual financial press conference.

To offset the decline in Germany, Opel will export more than half of its anticipated 1.1 million car production in 1992, compared with 38 percent in 1991. Last year Opel produced 995,000 cars, down 5 percent from 1990 because of the changeover from the Kadett to the Astra.

In the first five months of 1992, Opel sold 311,000 new cars in Germany compared with 363,000 units during the same period last year, said Louis Hughes, Opel chairman and the new president of GM Europe.

Opel's 1991 earnings also were hit by a $292 million write-off on the value of its ownership in Saab, the Swedish maker in which GM holds a 50 percent control. In addition, Opel had to invest $74 million in Saab "to make it a profitable company," Gunderson said.

In 1991, personnel costs rose by $390 million, thanks to a new union contract. The 1992 labor pact is expected to cost Opel another $147 million.

It expects to significantly reduce its costs when the new plant in Eisenach, in the former East Germany, opens this September. At capacity, that plant will produce 150,000 Astras and add production of the new Corsa.

Opel and GM are currently analyzing ways to boost productivity in Europe. "We must remain competitive or we will see the experience of the American manufacturers," Hughes said.

Hughes would not detail Opel's plans to cut employment, which he said must be slashed at all of its plants.

Hughes said the reductions at Opel will be made through attrition.

Car sales dip; trucks strong in mid-June

KRISTINE STIVEN BREESE
Staff Reporter

U.S. vehicle sales in mid-June lagged behind last year's in familiar formation: Trucks were strong, but cars were weak.

For the nine selling days from June 11-20, total U.S. car and truck sales were 407,213, down 2.4 percent from last year.

It was the seventh time in this year's 17 reporting periods that 10-day sales trailed last year's results.

And as has been the case all year, truck sales showed the most promise.

Measured against mid-June last year, light-truck sales increased 4.5 percent, to 152,398. Through May, light trucks were up 10.8 percent, and they gained again in early June.

But car sales dropped 6.0 percent from a year ago. Car sales were also down in early June, after being up 0.5 percent in the first five months of this year.

Overall sales of cars and light trucks are still 4.0 percent ahead of last year's.

Tom Webb, chief economist for the National Automobile Dealers Association, said he expects sales to continue to rise through the fourth quarter as employment picks up.

He said that manufacturers' promotions and merchandising are helping dealers.

"Attractive lease deals and good values on new models appear to be working," he said. But "dealers are still finding it takes a lot to entice customers to trade in vehicles that are paid off."

As in early June, Ford Motor Co. showed the biggest mid-month increase among the Big 3. Sales jumped 10.5 percent to 102,558.

While Lincoln and Mercury slipped, Ford Division's gains in cars and trucks pulled the whole company forward.

Chrysler Corp. also showed an increase, thanks in large part to Jeep sales, which rose 18.3 percent with help from the new Grand Cherokee. Chrysler does not report 10-day sales. *Automotive News* estimates Chrysler's figures and those of most imports.

General Motors sales dropped 5.3 percent in mid-June. That came despite another big leap by Saturn, which sold 2½ times as many cars this year as it did last year. Cadillac also was strong with a gain of 27.1 percent. But every other GM division dropped.

Sales fell 20.6 percent for American Honda Motor Co. Inc. and 12.5 percent for Toyota Motor Sales U.S.A. Inc.

Honda-badged cars were down 19.9 percent, and Acura sales dropped 23.8 percent.

At Toyota, Lexus fell 17.3 percent and Toyota Division sales slipped 12.1 percent.

Nissan Motor Corp. in U.S.A. also was down, but its dip of 4.5 percent was less severe than those of Honda and Toyota. Nissan's Infiniti Division had a gain of 34.1 percent, but Nissan-badged cars and light trucks were down 6.2 percent.

Toyota ups markup for warranty parts

DALE JEWETT
Service Editor

Toyota Motor Sales U.S.A. Inc. is raising the amount it pays dealers for parts used in warranty repairs by 50 percent for the 1993 model year.

Toyota and Lexus dealers will get cost plus 45 percent for parts on warranty claims filed beginning Oct. 1, the automaker announced last week.

The change answers requests for a higher markup from dealers. The National Automobile Dealers Association also has pressed automakers to increase the markup. Toyota and virtually every other domestic and import automaker have paid dealers cost plus 30 percent for warranty parts.

Toyota is the second automaker to increase the markup for warranty parts, although it leapfrogged over plans Ford Motor Co. announced in May. Ford will increase the markup for its dealers to 35 percent for 1993 models and to 40 percent for 1994 models.

Both Ford and Toyota will maintain a 30 percent markup for warranty parts on 1992 model and older vehicles.

"We're doing this to support our dealers and help them further support their customer service efforts," Toyota spokesman John McCandless said.

He said Toyota's dealer council had asked the automaker to increase its warranty parts markup rate but did not specifically propose the 45 percent rate.

McCandless said the new rate is effective for any warranty claim on 1993 model vehicles submitted after Oct. 1, even though the 1993 MR2 sports car is already on sale.

Officials for the other domestic and import automakers said they were studying the moves by Toyota and Ford, but no immediate changes were planned.

"We've been very open with our dealer council," said Tom Benson, vice president of service and customer management at Mitsubishi Motor Sales of America Inc. "We've been watching our competitors, but we didn't want to be the first to move," Benson said. "I do think this is the wave of the future. You'll see everybody else follow pretty soon."

Mazda Motor of America Inc. is studying the issue, spokesman Jay Amestoy said, "but it is a very expensive move."

In pressing its case for a higher markup, NADA last year released a study that showed dealers lost an average of $63,000 annually with the 30 percent warranty parts markup.

Court says N.Y. can adopt California emissions rules

Industry debates filing an appeal

HELEN KAHN
Senior Correspondent

New York state can require California emission standards on 1993 model vehicles, according to a five-judge panel of the state's intermediate appellate court.

But the auto industry might appeal.

The only other state now set to adopt California emission standards is Massachusetts, for the 1995 model year. Maine, New Jersey and Illinois also have proposals, according to the EPA. An additional 12 states are considering adopting California standards.

Under that state's plan, emissions rules will be progressively tightened over 10 years beginning with the 1993 model year. The biggest step will mandate 2 percent of an automaker's fleet to have "zero emissions" in model year 1998.

The auto companies had questioned the authority of the commissioner of the Department of Environmental Conservation to adopt California emission rules. But last week, the intermediate appeals court, upholding a 1991 lower court decision, said that the New York legislation had given the department power to protect the environment.

Attorney General Robert Abrams hailed the decision as a "great victory for New Yorkers."

Abrams also told the auto industry: "Stringent emission controls are as important to the health and safety of their consumers as safety belts and airbags and should be standard equipment on all cars."

The Motor Vehicle Manufacturers Association and the Association of International Automobile Manufacturers have not yet decided on appeal. But they say the issue "requires closer and more thorough review."

They also have "reservations about whether the now updated New York regulations comply with federal guidelines for states choosing to adopt the California program."

Costs drove decision to build in U.S

DIANA T. KURYLKO
Staff Reporter

MUNICH — Officials of BMW AG last week cited several reasons for choosing a 900-acre site in a remote corner of South Carolina to build their next car plant. Direct access to the company's biggest export market, the United States, figured prominently in the decision.

But for BMW Chairman Eberhard von Kuenheim, the many factors all boiled down to one irreducible nut. "We want to be competitive with our pricing — that is what we are talking about here," he said at a press conference in Munich, where the decision to build the U.S. plant was announced. "Germany still costs too much. It is our responsibility to maintain a profitable position in all our markets."

Indeed, for von Kuenheim and other members of the luxury-car maker's *Vorstand,* or supervisory board, the deliberations of the past three years have been driven by an awareness that the vaunted "Made in Germany" label was becoming increasingly costly to bear.

The dilemma: How to shift costs out of Germany without undermining that priceless *Standort Deutschland*. BMW's answer: a U.S. plant.

"There are many advantages in Germany, but if you compared the advantages and disadvantages of other countries, it changes in terms of productivity, initiative and imaginative opportunities," von Kuenheim said.

Among the economic forces shaping BMW's decision:

- A severe capacity crunch, as BMW's three German plants near peak production of 570,000 units this year. Expansion possibilities are constrained by work rules and location — production at BMW's main plant in downtown Munich is frequently interrupted by traffic congestion that delays just-in-time parts deliveries.
- The second highest wage rate in Europe, after Sweden. According to BMW, U.S. wages are at least one-third less than in Germany.
- A startling slowdown in productivity growth.
- A worrisome decline in German auto sales, coupled with increasing competition from Japanese luxury marques.
- The increasing costs of currency fluctuations.
- Increasing exposure to North American suppliers. BMW says it bought $250 million in U.S. parts last year.
- Rising taxes at home.

To the concern of many private and government economists, BMW's cost problems are shared by every German carmaker.

"From the early 1950s until four to five years ago, the high productivity in Germany was enough to offset the high cost-per-hour," said Garrell Rhys, motor industry economics professor at the University of Wales Cardiff Business School.

"It didn't matter until another product came along. Cadillac and Lincoln were not in head-on competition with the Germans in the segment the Germans were going after. But the Japanese — Lexus, Infiniti and Acura — are offering vehicles with a higher level of speciality for a lower price than the German cars, and the American consumer turned to them."

DAVID L. BURHANS / AUTOMOTIVE NEWS

COMPETITIVENESS LOST

While Japanese competition was becoming hotter, German productivity gains were slowing, further eroding competitive position.

"Productivity in the German automobile industry has increased less in the last 10 years than in any other country," said Karl-Heinz Bieniwitz, economist for the VDA, the German auto industry's trade association.

From 1980 to 1990, Bieniwitz said, productivity per hour increased 31 percent more in the United States and 50 percent more in Japan than in Germany, Europe's most productive nation.

During that period, German productivity grew at an average annual rate of 1.9 percent. That compared with increases of 3.3 percent for the United States, 5 percent for Japan, 3.6 percent for Italy, 5.5 percent for Spain, 8.1 percent for Britain and 5.8 percent for France.

Average wage per hr. in U.S. dollars

United States	22.50
Japan	21.70
Italy	20.35
France	19.00
Spain	18.94
United Kingdom	17.08

Source: VDA

Wages during the same period increased an average of 4.5 percent a year in Germany, compared with 2.7 percent in the United States and 7.2 percent in Japan.

Only Sweden is higher, with an average hourly wage of $29.17.

"Labor costs and salaries, I have said often, are one-third more in Germany than in the United States or Japan. This is one of many reasons for us to take this decision," von Kuenheim said last week.

According to several German economists, the country's automakers have recognized the growing threat from Japan but have been slow to embrace the worldwide move toward lean manufacturing. Those analysts say the blind spot developed because of the frenzied sales boom that was unleashed in 1989 by the promise of German reunification.

Last year, a record 4.28 million new vehicles were sold in Germany — nearly one-third of the total in all of Europe. And while European makers outside Germany shed a combined 410,000 jobs in the 1980s, German carmakers added 79,000.

"There is no question, in terms of competitiveness, that the German export industry has lost a bit of ground in the world," said Ulrich Ramm, chief economist for Commerzbank AG in Frankfurt.

When Germany was reunified in October 1990, exports and manufacturing were at their peak, he said. "We had no empty capacity for rising exports, and overall economic growth was not in a phase where one could expect sharp rising exports," Ramm said.

With factories running at capacity and corporate profits setting records, unions negotiated even higher wages. This year, the metal workers' union, which represents German auto workers, won a 5.8 percent increase and a reduction of the work week — from 37 hours to 36 hours in 1993 and to 35 hours in 1994.

Each hour trimmed from the work week is equivalent to a 2.5 percent wage hike, said BMW chief economist Helmut Becker.

According to Ramm, the higher wage settlements have boosted German carmakers' per-unit costs at least 10 percent in the past two years.

Complicating the scenario, the German mark has risen against the currencies of its major trading partners, making German goods less competitive overseas, Ramm said. At the same time, taxes are rising in Germany while rates are down in other nations, including France and Britain.

"The overall cost situation of the German wages and taxes — plus the environmental protection necessities, which are costly — have raised new concerns about the German economic situation," Ramm said. "The overall cost situation is so high that we have to see that we don't lose more competitiveness."

Ramm stressed that German costs are not so high that the country is in danger of losing huge chunks of its core industries. But, he said, "We have new places east of our border — in Czechoslovakia and Hungary — where you can get cheap labor, with a good overall infrastructure and near a market that is newly competitive."

EAST EUROPE RULED OUT

To the dismay of many political and union leaders in Germany, however, BMW ruled out a new plant in the high-unemployment eastern provinces on purely economic grounds. According to von Kuenheim, BMW rejected the former East Germany because productivity there is 25 percent lower than in the country's eastern states.

Therefore, although wages are 60 percent to 65 percent lower, the labor cost would be twice as high on a per-car basis, he said.

Similarly, Czechoslovakia was rejected because it lacked the up-to-date communications infrastructure to support a modern car plant, he said.

"We needed infrastructure and communications technology that would meet the demands of the unit plant, which must be integrated with all other BMW plants," von Kuenheim said.

He refused to apologize for withholding jobs from Germany while opening a U.S. plant. BMW will cut 3,000 of its 62,000 workers in Germany this year as it moves to slash costs.

"We are not in business to supply jobs by building these plants," von Kuenheim said. "We are not like the shipbuilding industry that is heavily subsidized."

According to Daniel Jones, professor at the University of Wales and one of the authors of *The Machine That Changed the World*, the Japanese showed BMW the wisdom of building an offshore greenfield plant. Nissan's plant in Sunderland, England, "is one of the best in the world," Jones said.

The South Carolina plant will give BMW the opportunity to experiment with such ideas as team assembly, a concept not easily implemented in Germany, he said. According to Jones, the rigid hierarchy and what he calls "the proud engineer" — experts not used to working in a team — are major obstacles to team work in German plants.

And not incidentally, analysts agree, the U.S. plant will give BMW clout with unions at home.

"If this (U.S.) plant is more profitable than domestic plants, it can be used in negotiations to force lower wage settlements," said Klaus-Jurgen Melzner, an automotive industry analyst with Deutsche Bank AG in Frankfurt. "IG Metall (the auto workers' union) will be watching closely." AN

Plant quest began in '70s

LINDSAY CHAPPELL
Staff Reporter

GREENVILLE, S.C. — BMW AG has been studying a U.S. auto plant since the late 1970s — before the Japanese transplant automakers arrived in the United States, says a consultant who helped BMW with its search.

But economic cycles and other considerations kept the German automaker away — until last week.

An official with PHH Fantus, an international relocation firm that helped BMW select Greer, S.C., said his firm has had discussions with the carmaker going back more than a dozen years.

"They have obviously wanted a presence here for a long time," said James Schriner, a Fantus vice president who worked on the BMW project.

In the late 1970s, Volkswagen AG was in full swing at its Westmoreland, Pa., car plant, which ceased production in 1988.

Schriner said the Greer site emerged from a huge field of potential sites during the past few months. But factors kept changing. Earlier, BMW had considered and then ruled out Eastern Europe, he said. The idea was reconsidered after the collapse of the Soviet Union, and then re-rejected.

The company was not wild about Omaha, Neb., which wound up as Greer's main competitor. But Nebraska officials so sweetened their incentives package that BMW studied the idea, Schriner said. At last report, Nebraska and various private groups had pledged $240 million.

"They kept throwing so much money at us," Schriner said, "we had to consider it. Omaha is closer to Germany than Greer is — if you fly over the North Pole. But there's no amount of money that can move the Atlantic Ocean to Nebraska."

BMW will ship large volumes of components by sea to Charleston, S.C., and then transport them by rail and truck to Greer. AN

Pickups	$200-1,400, quota

Chrysler extends minivan rebates

JOSEPH BOHN
Staff Reporter

Bowing to pressure from dealers, Chrysler Corp. backed off its decision to end all minivan rebates June 22, but the automaker is still trimming its incentive costs.

Chrysler has extended the $500 rebates on short-wheelbase Caravan/Voyager plus short- and long-wheelbase Caravan C/V models through Aug. 31.

It also extended through Aug. 31 individual equipment discounts that are part of its National Minivan Sale.

But the company did discontinue $500 rebates on long-wheelbase minivans in all states except California and Hawaii. As of June 22, it reduced the long-wheelbase rebate in those states from $1,000 to $500 while extending them through Aug. 31.

Chrysler originally notified dealers it would end all minivan rebates on June 22, but dealer pressure forced the company to reconsider, according to dealer and company sources.

Chrysler said April was its third-best minivan sales month and May was its second-best. Chrysler minivan sales of 197,248 during the first five months of this year were up 24 percent over last year

Dealers ordered a high volume of minivans during the buildout and were fearful that an end to the rebates would break their sales momentum.

The partial reduction in minivan rebates shows Chrysler is still moving forward with its plan to reduce incentive spending substantially in the third and fourth quarters, according to dealer and company sources.

Part of the savings will come from new high-volume products, like the Jeep Grand Cherokee and the 1993 Chrysler Concorde, Eagle Vision and Dodge Intrepid LH sedans, on which company officials do not anticipate incentives.

Chrysler is also counting on a strengthening market to help cut its incentive costs, according to dealer and company sources.

Chrysler spent an average of $1,325 per vehicle on incentives in the first quarter of 1992, according to company spokesman Steve Harris.

That amounts to $506 million, based on the number of cars and trucks Chrysler sold in the United States.

Chrysler overhauls customer rebates

incentive
WATCH

Chrysler Corp. announced a new customer rebate program that includes new rebates on some 1993 vehicles and revisions on 1991 and 1992 models.

The program is effective July 1 through Aug. 31.

The 1993 models and their rebates are: Chrysler Imperial and Fifth Avenue, $1,250; Dodge Ram wagon/van and conversion and Daytona, $1,000; Chrysler New Yorker Salon and Dodge Dynasty, $750; and Jeep Cherokee, $500.

Rebates were increased on these vehicles: 1991 and 1992 Chrysler LeBaron coupe, from $1,000 to $1,500; 1991 and 1992 LeBaron convertibles, Eagle Summit four-door, and 1992 Daytona, from $500 to $1,000; and 1991 and 1992 Dodge/Plymouth Colt and Eagle Summit three-door models, from $500 to $700.

Rebates were reduced on these vehicles: 1991 and 1992 Plymouth Sundance/Dodge Shadow, from $1,000 to $700; and Dodge Dakota pickup and Jeep Comanche, from $750 to $500.

Also, Chrysler extended its National Minivan Sale on short-wheelbase models through Aug. 31. The program includes a $500 customer rebate and discounts on factory-installed equipment adding up to $1,600.

Chevrolet is paying its dealers $1,000 on 1992 Corvettes and $2,000 on 1992 Corvette ZR-1 models through Sept. 23.

Ford Motor Co. incentives expire tomorrow.

— Arlena Sawyers

INCENTIVE WATCH — CUSTOMER INCENTIVES

CONTINUING PROGRAMS

CHRYSLER CORP.	
Expires June 30 unless otherwise noted. Finance rates in lieu of rebates are 0 to 9.9 percent.	
1991-92 models	
Chrysler Imperial, New Yorker Fifth Avenue	$1,500
N.Y. Salon, LeBaron sedan	$1,000
LeBaron coupe, conv. (1992)	$1,000
LeBaron coupe, conv. (1991)	$500
Dodge Monaco, Daytona (1991 only)	$1,500
Shadow, Dynasty, Spirit	$1,000
Colt 3-dr. (Northeast)	$700
Daytona (1992), Colt	$500

Loyale (awd wagons)	$500

NHTSA warns dealers to not disconnect belts

ROGER ROWAND
Staff Reporter

If new cars with automatic belts are displayed for sale, dealership managers better make sure those belts are fastened.

It's the law.

Federal regulations prohibit dealership personnel from rendering safety items inoperative. In the case of automatic belts, that means unbuckled, says Barry Felrice, head of rulemaking at the National Highway Traffic Safety Administration.

During the past few years, the agency has sent enforcement personnel to dealerships to check on compliance.

Initially, they found only about 30 percent of the stores investigated were in compliance, but the agency did not press its case.

"We're not interested in penalizing dealers as much as we are interested in informing them of their responsibilities in this," Felrice said.

When follow-up visits were made a few months later, investigators found almost all the belts were attached, Felrice said at a regular meeting with industry technical representatives in Romulus, Mich., last week.

NHTSA finds the connection rate is up to about 50 percent these days.

It continues to check belts but not as frequently, he said.

"We don't think it's a big problem," he said.

"Customers know they have to use automatic belts, and actual usage in the field averages about 80 percent and is up to 90 percent with some systems," Felrice said.

"The number of vehicles with automatic belts is rapidly declining and, while we'll continue to inform dealers of their responsibility, we don't intend to place any great emphasis on this matter," Felrice added.

Nationally, use of all types of belts by motorists is about 59 percent, NHTSA said.

NHTSA probably will soon change some of the information given to new-car buyers.

For instance, the agency is moving to eliminate its requirement that a vehicle's stopping distance be reported.

The reasoning in Washington is that listing stopping distance numbers is a waste of time because virtually no one uses them, Felrice said.

Next month, the safety agency will issue a notice of proposed rulemaking covering the elimination. A public-comment period will follow.

Toyota adds to engine test facility in U.S.

LINDSAY CHAPPELL
Staff Reporter

ANN ARBOR, Mich. — Toyota Motor Corp.'s U.S. technical center will begin expanding its engine-component design capabilities in July in a move that should aid American suppliers of critical components.

Toyota Technical Center U.S.A. Inc., a 300-employee operation near federal EPA laboratories here, will add a second office building of 30,000 square feet and add about 50 technicians.

The expanded operation will test engines and evaluate outsourced engine parts. Component design work, performed in conjunction with suppliers, also will be added. Toyota now does most of its engine-evaluation work in Japan.

Local officials expect the expansion to be operating by mid-1993.

Toyota has been assembling four-cylinder engines in Georgetown, Ky., since 1989 and is steadily increasing its engine-producing capabilities in this country. In 1990, it began machining engine parts. It has also begun outsourcing locally cast engine components and launched a plan to build six-cylinder engines in Georgetown.

U.S. suppliers have often complained about the difficulty of selling critical components like engine parts to Japanese automakers and their U.S. transplants. The Japanese companies have traditionally responded that the process will be easier as they expand their U.S. research and design capabilities.

Toyota's Ann Arbor technical center has grown rapidly over the past two years, when it had just 25 employees.

The center evaluates a wide range of North American-sourced components, including seats, safety restraint systems, headrests, hinges, tires and brakes.

Rail strike cuts GM output

GWENDOLYN ZONGHETTI
Special Correspondent

The brief railroad strike cut production at six General Motors assembly plants in the United States. Normal production is expected to resume today at all except the Moraine, Ohio, truck plant, which returns tomorrow.

Ford Motor Co., Chrysler Corp. and the transplants reported that no production was lost because of the rail tie-up.

Three GM truck plants lost one day of production last week due to the strike. They were Fort Wayne, Ind.; Tarrytown, N.Y.; and Shreveport, La. Moraine, which works a four-day week, will be down today.

The Wilmington, Del., and Oklahoma City plants shortened their shifts but did not close.

In the United States and Canada, calendar-year car and truck production reached 6 million last Friday, one month ahead of 1991.

This Friday, all U.S. and Canadian assembly plants will be closed in observance of Independence Day and Canada Day.

U.S. car production was estimated at 123,306 last week, down 10.5 percent from the prior week and down 2.9 percent from 1991.

So far this year, U.S. makers have assembled 2,924,362 cars, up 6.5 percent from last year.

Last week, car production in Canada was estimated at 25,800, down 1.7 percent from the prior week but up 6.1 percent over the year-ago week.

Last week's U.S. truck production was estimated at 79,869, a decrease of 5.8 percent from the prior week and down 0.2 percent from the same week last year.

Year-to-date, U.S. truckmakers have assembled 2,009,518 vehicles, an increase of 20.7 percent over the year-ago period.

Canadian truckmakers estimated production last week was 21,732, up 14.4 percent over the prior week and up 21.7 percent over 1991.

All of Ford's U.S. plants begin a two-week vacation today. Production will resume July 13.

The Oakville, Ontario, plant begins a two-week vacation July 6. St. Thomas, Ontario, begins a two-week vacation July 13.

Last week, Ford scheduled daily overtime at four car plants and two truck plants. The car plants were: Atlanta; Chicago; St. Louis; and St. Thomas. The truck plants were Kansas City, Mo., and Louisville, Ky.

GM slated daily overtime last week at the Janesville, Wis., and Moraine, Ohio, truck plants.

In Canada, GM's Scarborough, Ontario, and Oshawa, Ontario, truck plants worked overtime last Saturday.

Chrysler slated daily overtime last week at the Detroit and Sterling Heights, Mich., car plants and the St. Louis truck plant.

It also scheduled Saturday overtime at the Windsor, Ontario, and Pillette Road (Windsor) truck plants and the Mack Avenue (Detroit) car plant.

late news

Lovejoy named to parts job

William Lovejoy, ousted last month as president of General Motors Acceptance Corp., was appointed general manager of GM's Service Parts Operations.

Lovejoy replaces John Rines, the executive who took over the GMAC presidency when Lovejoy was removed because of a $436 million loss connected with dealer John McNamara's alleged vehicle export scam.

Lovejoy was tapped for the job by J. Michael Losh, GM vice president and group executive in charge of North American vehicle sales and marketing. Lovejoy will report to Losh.

Service Parts Operations, headquartered in Flint, Mich., markets replacement parts worldwide through its AC-Delco, GM Parts and International sales activities. AC-Delco serves the independent aftermarket, while GM Parts serves GM dealers.

Analysts bullish on '93 sales

Predictions range up to 15 million

CHARLES M. THOMAS
Staff Reporter

Auto analysts predict a healthy rebound in new-car and light-truck sales next year with estimates wedged between 14.2 million and 15.0 million vehicles. Pent-up demand by consumers whose vehicles are creaking with age is expected to bolster sales.

The analysts' 1993 forecasts compare with their revised estimates of 13.0 million to 13.5 million sales this year.

"There is a six-year trading cycle," said Ron Glantz, analyst with New York-based Dean Witter Reynolds. "Consumers are faced with the choice of putting $1,000 into their old cars or buying new ones because they have to get to work."

Most people are employed, and their net worth has improved since they last purchased a vehicle, he said. But their cars have a lot of wear and tear.

Showroom traffic has exploded since mid-May, up 10 percent over last year, an indicator that consumers are shopping. There is a four- to six-week lag between looking and buying, according to Glantz.

George Magliano, analyst with WEFA Inc. in Pennsylvania, agrees. His prediction for next year is 14.5 million vehicles.

"The recovery is sluggish but momentum is building," he said. "1993 is the payback year."

For the most part, analysts have downgraded their 1992 sales predictions or altered the sales mix between cars and trucks. Truck sales have been surprisingly

Signed, sealed, delivered

Chrysler Corp. Chairman Lee Iacocca autographed the first production LH sedan, an Eagle Vision, after it came off the Bramalea assembly line last week. Brampton, Ontario, Mayor Peter Robertson was Iacocca's first customer, taking delivery of a maroon Intrepid. See story on Page 3.

NHTSA juggles rollover arguments

MAX GATES
Staff Reporter

WASHINGTON — As they move toward a December 1992 deadline for creating a plan to save some of the 10,000 lives lost each year in rollover accidents, federal safety officials are hearing two opposite arguments.

Fix the cars, say consumer and safety advocates.

Fix the drivers, say automakers.

The car and the driver share the blame for rollover deaths, say engineers at the National Highway Traffic Safety Administration, who are under orders from Congress to take action. The issue now ranks at the top of the agency's agenda, and NHTSA has proposed a three-pronged attack aimed at:

- Educating drivers about the risks of rollover.
- Making all vehicles — not just sport-utilities — less likely to roll over.
- Protecting occupants better when a rollover occurs.

"There is no magic bullet. It will take a lot of little bites," said Barry Felrice, head of rulemaking for NHTSA.

Few dispute the seriousness of rollovers. They are relatively rare — just 137,000 out of 6.5 million reported accidents a year. But they are deadly, killing about 10,000 annually. Only frontal collisions claim more lives.

The issue has smoldered since the late 1970s, following reports of high rollover death rates in the Jeep CJ-5, a popular sport-utility. Since then, bad publicity about rollovers has nearly killed the Suzuki Samurai and crippled Ameri-

The pull of China

Market offers promise — but only for long-term

RICHARD JOHNSON
Staff Reporter

BEIJING — At the Detroit or Frankfurt auto shows, it might have been an auto exec's dream: demand for product brochures so intense that police had to quell the occasional mini-riot when the pamphlets were placed on display.

Or crowds around one car — the Dodge Viper — so dense that its red finish fogged up in the artificial atmosphere of radiated body heat.

In the West, after all, such manifest enthusiasm typically translates into hard sales.

But this is Auto China '92, the biennial national show that Beijing shares with Shanghai, and even the wildest enthusiasm translates into little more than long-range promise.

Despite rapid gains in consumer spending power, few Chinese can afford a car, and government units and worker co-ops still account for 99 percent of all vehicle sales here.

Still, for the executives from the half dozen or so Western and Japanese automakers who exhibited here last month, the promise is more than enough for now.

"We are very optimistic about the Chinese market," said Jerry Wang, vice president of General Motors Asia, which showed the Lumina APV minivan, a full-sized sport van and various Cadillac and Buick models here.

About 600 exhibitors, including more than 120 from overseas, attended the show, which ran from June 25 through June 30. Ford Motor Co., which has no China project, was the only no-show from the Big 3.

Japanese carmakers were out in force, but

Crowds at the Beijing auto show vied for a glimpse of a Dodge Viper on display.

Mazda courts women buyers

KRISTINE STIVEN BREESE
Staff Reporter

LOS ANGELES — For much of the auto industry, the female consumer is an enigma. But for Mazda Motor of America Inc., she is a gold mine.

For the last two years, Mazda has made women a key part of its marketing strategy, and its efforts are bearing fruit. With a combination of media buys, innovative promotions and high-profile-event sponsorships, Mazda has increased its percentage of female buyers from 45.0 percent in 1989 to 52.3 percent in 1992 so far.

As Mazda has moved its line upscale, it has attracted women — and their affluent male peers — by talking to them with intelligence rather than insulting them with gimmicks.

"Over 50 percent of the cars bought today are bought by women, and these women are making more money all the time. You hear that thrown around a lot, but nobody's really doing anything about it," said Jan Thompson, vice president of marketing at Mazda and one of the highest-ranking women in the auto industry.

"The auto industry is not just behind, it's backward," she said. "Nobody knows how to

convenience option, a $665 power option and a $1,355 performance option. The GXE offers a $930 extra performance package, a $945 luxury package and a $1,000 leather package.

Extra options include four-wheel anti-lock brakes.

The Quest has been developed and built with Ford Motor Co. Ford's version, the Mercury Villager, sells for $18,011 and $19,053 in the GS series. Prices for the Villager LS are $22,143 and $23,546.

Audi holds line on 90 prices

AUBURN HILLS, Mich. — Audi of America Inc. is introducing its 1993 90 sedan with a sticker price of $25,850.

The 90 series — S, CS and CS Quattro Sport — officially go on sale today. The 1993 90 S with automatic transmission is priced at $26,650, the same price as a comparable 1991 model. The company did not offer a 90 for 1992. The five-speed 90 CS is $28,700 and the 90 CS Quattro Sport is $32,250.

Strike ends at VW Mexico

MEXICO CITY — Sixteen thousand workers at Volkswagen Mexico's plant in Puebla ended a two-day strike Thursday after accepting a 15 percent wage increase.

The workers had sought a 35 percent increase, while the company offered 12 percent. The deal also includes a 2 percent rise in fringe benefits and a 5 percent wage bonus tied to productivity.

The strike threatened the launch of the new Golf and Jetta, which went on sale in Mexico last month. U.S. exports begin this fall.

New bosses at Mazda r&d

IRVINE, Calif. — The project manager for Mazda's new 626 and MX-6, Yutaka Hirose, has been named president of Mazda Research and Development of North

who has moved back to Japan as general manager of Mazda Motor Corp.'s information systems division.

Mazda's top U.S. designer, Tom Matano, was promoted to executive vice-president for design and special projects at the company.

Chrysler ads tout safety firsts

HIGHLAND PARK, Mich. — Chrysler Corp. touts its history as an innovator of car safety features in an ad campaign that broke on cable TV July 2 and on the networks today.

The 60- and 30-second spots point out that Chrysler pioneered many safety "firsts" in its vehicles such as the padded dash, and that Chrysler was the first to install airbags in its entire car line and to offer dual airbags and built-in child seats.

Chrysler plans 38 network and 24 cable TV airings for the ads in July.

Bad studs spur big-truck recall

BELLEVUE, Wash. — Paccar Inc. is recalling about 600 Peterbilt and 250 Kenworth Class 8 trucks because of potentially defective wheel studs.

A company spokesman said the wheel studs were not properly heat treated, resulting in brittleness and possible susceptibility to breakage.

Reickert heads New Venture

TROY, Mich. — Erick Reickert has been named interim president and chief executive officer of New Venture Gear Inc., the driveline joint venture between General Motors and Chrysler Corp.

A New Venture board member since May 1990, Reickert, 56, remains vice president of powertrain operations for Chrysler Corp. until his retirement from Chrysler, scheduled for Dec. 31.

Ford, Chrysler cut interest

reduced interest rates charged to Ford and Lincoln-Mercury dealers on retail and lease financing by 0.5 percentage points in response to the Federal Reserve Board lowering its discount rate.

Retail and lease rates charged by Ford Motor Credit to dealers varies by region. A spokesman declined to disclose the current rate to dealers, saying the rates are competitive with banks and other lenders.

A Chrysler Credit Corp. spokesman said Chrysler Credit will lower its rates to dealers by 0.5 points at mid-month.

Ford introduces electric van

BISMARK, N.D. — Ford Motor Co. introduced its electric Ecostar van to journalists at a convention of outdoor writers last week.

Spokesman Mike Parris said that within six months, 87 Ecostars will be delivered to power companies in 10 cities. Each 30-month lease will cost about $100,000.

Powered by a sodium-sulfur battery pack, the Ecostar panel truck is built on a European Escort platform by the A.J. Carron Co. of Detroit.

It uses an AC motor, has a range of 100 miles, accelerates to 60 mph in 12 seconds, and has a payload of 800 pounds.

The Ecostar's recharge time is 5 to 6 hours on household current.

— *Tom Huggler*

Firm patents battery

SEATTLE — A two-year-old high-technology company announced last week that it has patented a battery based on a spinning flywheel instead of a chemical reaction.

American Flywheel Systems of Seattle said its battery will have several times as much energy per pound as the advanced lead-acid batteries the General Motors electric car will use, giving it a daily range of 600 miles instead of about 120 miles.

President Edward Furia said the company is seeking investors.

Furia hopes to build the first demonstration unit by next summer and offer the device to manufacturers for

briefly

It's a roadster for BMW/U.S.

BMW AG officials have been coy about the first BMW to be built in America. But here's the car: It's a roadster. At least, that's what supplier sources say. BMW officials say they want a car that appeals to Americans so they can sell about half of the annual plant production of 60,000 vehicles in the United States. That's a lot of roadsters. (**Mazda** sold 31,240 Miatas last year.) In any case, the car will use the 3-series platform. Job No. 1 at the planned BMW plant in Greer, S.C., will be in August or September 1995.

TIP ON PRICES — Chevrolet General Manager Jim Perkins gave the Texas Automobile Dealers Association a clue on 1993 pricing. "It makes no sense to continually raise prices and add incentives to try to cover" the increase, he said. "I think using restraint would probably make more sense."

GM SUPPLIER TIPS — Mobil Oil AG has copped its second straight "Supplier of the Year" award in Europe. **General Motors** parts czar J. Ignacio Lopez de Arriortua, who flew to Spain to present the award, praised "Mobil's creativity and the spirit of continued innovation," adding, "This is the way to win in a year of great challenges."

THE AD WORKS — Maybe **Ford** should build a concept car called the "Lately." Ward Huntington of New Salem, Mass., wrote to *Ford Times* about a conversation with his 7-year-old grandson, Justin. On seeing Huntington's Ford Tempo, Justin asked: "Is this a Ford Lately?" As in, "Have you driven a . . . "

FOR CAR GALS — Suzuki Motor Co. will team up with Seiyu Ltd., a major supermarket chain, to develop stores and services for women. A potential chain of 50 dealers will begin with one shop in central Japan featuring current Suzuki cars and clothing and food from Seiyu. It will include an information service, catalog shopping and ticket sales. If it succeeds, the two could do a car together. About four years ago, Seiyu got into the auto business to market a **Mitsubishi** minicar. It was called the "Lettuce."

TEMBLOR TIPS — Know someone who'll be driving in California? You might pass on these earthquake driving tips from the Automobile Club of Southern California. A quake feels like four flat tires when you're driving. Slow down and pull over, but not near an overpass, bridge, tree or building. Stay in the car until it's over, and remember that aftershocks will follow. Tune your radio to the news. Cooperate with cops.

Chrysler is optimistic about its LH cars, but a cautionary T-shirt did show up on

Saturn leaps into Power CSI list

Lexus and Infiniti remain at tip-top of quality tally

ARLENA SAWYERS
Staff Reporter

In its first year of eligibility, Saturn Corp. was named the third best nameplate and the best domestic in customer satisfaction in the J.D. Power and Associates Customer Satisfaction Index, a survey that is usually dominated by luxury and import car lines.

It is the highest ranking for any domestic automaker since Power began publishing the index six years ago.

First and second place went to Lexus and Infiniti, respectively. Acura finished fourth. The report also was favorable for Jaguar Cars Inc., which pushed its way into the top 10 makes.

The annual survey evaluates customer satisfaction among car and truck owners after one year of ownership. About 34,000 vehicle owners participated in the survey of 1991 models.

The scores are derived from consumer responses to questions about vehicle repair and reliability and how consumers were treated at the dealership.

Analysts attribute some of Saturn's high ranking to its success at turning potential problems into public relations coups.

Last year, Saturn received much favorable publicity when it replaced 1,836 cars that had been filled with bad engine coolant.

Texaco Refining and Marketing Inc. which supplied the coolant, picked up some of the cost, but "Saturn got the good press," said William Vanderbok, president of Market Perceptions and Solutions, an auto consumer research firm in Woodland Hills, Calif. "It was the best thing that could have happened to Saturn."

Adds Jeremy Anwyl, president of Marketec Systems, an automotive marketing and consulting firm in Santa Ana, Calif.: "How you deal with a problem is more important than the problem itself."

But more importantly, said Anwyl, is that Saturn and the three other top car lines are what he calls "clean sheet of paper" stores.

As newcomers, they started with a clean slate and hand-picked dealers and staffs who were willing to take a risk on what was then a new philosophy: Customers want good service.

"Saturn is a capable car, but not a superior car," he said. "When you look at the key differentiator, it's the purchase and ownership experience."

Older car lines, on the other hand, are still trying to shake the outdated sales and service methods of the 1970s and 1980s, said Susan Jacobs, president of Jacobs Automotive Inc., an automotive forecasting and consulting firm in Little Falls, N.J.

"The psychology of Lexus, Saturn and Infiniti stands for putting the customer first," said

Chrysler set off fireworks when the first LH cars rolled off the line.

Chrysler downplays fleets for first LHs

ROGER ROWAND
Staff Reporter

BRAMPTON, Ontario — Chrysler Corp. will put most of the early production of its new line of mid-sized LH sedans in dealer inventory to accommodate strong retail demand, according to Chairman Lee Iacocca.

Chrysler intends to ignore conventional wisdom that has prompted automakers to flood daily rental fleets with early output to increase consumer visibility.

Chrysler plans to deprive the daily retail fleets — even the ones it owns — of the 1993 Chrysler Concorde, Dodge Intrepid and Eagle Vision LH cars.

At the ceremonial rolloff of the first LH sedan last week, Iacocca said dealers are clamoring for the cars and retail demand is so great that fleet business will come second. The cars are slated to officially go on sale Nov. 1.

"We can't ignore it completely," he said. "We own a couple of daily rental companies ourselves, and we'd like to get the cars out in the big resort areas like Los Angeles and Florida. We've allocated a very small portion to fleets; they're getting a modest few."

During the festivities for the first

Chrysler seeks new dealer attitude for LH

ARLENA SAWYERS
Staff Reporter

Chrysler Corp. wants its dealers and their staffs to develop a new attitude to go along with their new line of mid-sized sedans.

The LH triplets — Chrysler Concorde, Eagle Vision and Dodge Intrepid — are built on Chrysler's first new platform in 10 years. The cars are scheduled to go on sale in November.

Last week, Chrysler launched Customer One, a $30 million corporate training process to school 5,000 dealers and their staffs — about 100,000 persons in all — in the art of customer service and satisfaction.

The goal is to change the attitude of dealership employees toward their jobs and customers.

Customers are not one-time conquests, but lifelong partners who should be treated with respect, said Theodor Cunningham, Chrysler executive vice president of sales and marketing.

"Dealers are ready to focus on change," Cunningham said. "We have the opportunity to introduce brand new customers to a brand new car. We have to work hand-in-hand with dealers."

As an extra incentive for dealers, Chrysler on April 1 began basing dealers' cash incentives on customer satisfaction ratings and performance against monthly sales objectives. The largest rebates will be given to dealers with the highest scores.

Dealers will not be eligible for any awards unless their staffs complete Customer One.

Chrysler is charging dealers $50 per person for the program, which means that about $5 million of the $30 million cost of Customer One will come from the dealers.

Chrysler One's chief trainer is Luis Martinez, vice president and group account supervisor at Ross Roy Communications in Bloomfield Hills, Mich. Martinez played a similar role at Infiniti Division before joining Chrysler's team.

Cunningham said the training focuses on self-discovery and role playing, but he declined to disclose specifics.

The training includes every employee from cashiers to service technicians to the dealer principals. Additionally, 200 Chrysler corporate executives will be trained alongside dealers.

The first phase of the program began June 29 and continues through August. By the end of the meetings, about 100,000 dealership employees and dealers will have attended sessions at 132 sites nationwide.

Phase one focuses on understanding and meeting the needs of the customer.

Dealership employees will attend sessions geared to their jobs.

Dealers and managers will attend two-day sessions, and salespersons, service advisers and parts counter teams will attend separate two-day sessions.

Support staff who have direct contact with consumers such as cashiers, receptionists, telephone operators and greeters will attend one-day sessions.

Service technicians and clerical staff will attend half-day, in-dealership sessions.

Phase two begins in early fall to coincide with the LH introduction. Chrysler will conduct one-day sessions to familiarize dealership personnel with the LH cars with special emphasis on customer satisfaction and treatment.

Phase three is a continuing process in which Chrysler will monitor dealership personnel and provide follow-up training.

Cunningham said it became apparent that Chrysler had to make some changes when it began consumer research for the LH cars about 18 months ago.

Chrysler expects the LH cars to attract consumers who have never considered a Chrysler product and others who will return to Chrysler to give the company another chance. Those two groups of consumers have higher expectations of customer service than Chrysler's current customer base, Cunningham said.

To develop Customer One, Chrysler studied automotive and non-automotive companies with reputations for good customer service.

Among the companies studied were Ritz-Carlton Hotels, Walt Disney Co. and Infiniti.

S.C. BMW dealer expects windfall from U.S. plant

LINDSAY CHAPPELL
Staff Reporter

GREENVILLE, S.C.

The lone BMW dealer in upstate South Carolina is ready to unleash a new marketing campaign.

Expect the ads to read: "Support your local economy. Buy a BMW."

Strange words for pitching a European import. But Mickey Joy, president of Century BMW here, says the market is ready for them.

BMW AG's announcement June 23 that it will build a $300 million factory promises to put 2,000 people to work building luxury cars seven miles from Joy's dealership. He believes the news will give hesitant import-car buyers a push before the first steel beam goes up.

"There are people out there who want to buy $70,000 cars right now," Joy says. "I know there are. I've talked to them. But with the recession and all the awareness of unemployment and the condition of the economy, they don't want to appear ostentatious.

"Now it's OK to go out and buy an expensive car again," he says. "Think of all the advertising we'll be able to generate. You can buy a BMW and help support the American economy."

When BMW's news broke two weeks ago, Joy and his advertising agency were already working on a long-term marketing campaign to trumpet the expected news. His advertising probably will carry a factory tie-in permanently now.

The campaign will target BMW's import competitors, including Lexus Division of Toyota Motor Sales U.S.A. Inc. and Infiniti Division of Nissan Motor Corp. in

Nissan publishes flat-rate manual

CARSON, Calif. — Nissan Motor Corp. in U.S.A. is offering its dealers a flat-rate manual covering more than 300 of the most commonly sold services for the past 10 model years.

The guide's pricing information includes parts and labor, taxes and miscellaneous charges. Dealers in Nissan's South Central region received the data in May. The regional rollout is expected to be completed in August.

Ford recalls 44,000 Probes

DEARBORN, Mich. — Ford Motor Co. has recalled about 44,000 of its 1990 and 1991 Probes sold in the United States and Canada to replace the throttle position sensor.

Ford said premature wear of the sensor may cause the cars to exceed U.S. or Canadian carbon monoxide emissions standards.

ASE to offer parts tests

HERNDON, Va. — The National Institute for Automotive Service Excellence will offer certification tests for auto parts and medium/heavy-truck parts specialists.

The first truck parts specialist test will be in November. The auto parts test is expected to be ready in November 1993.

The group said the purpose of the program is to improve the sales, promotion and marketing of automotive and truck parts and service. Both tests will cover communication skills, sales skills and vehicle systems knowledge.

Toyota opens parts center in Illinois

Facility a model for future depots

DALE JEWETT
Service Editor

AURORA, Ill. — Toyota Motor Sales U.S.A. Inc. expects its new parts distribution center here to be a model of efficiency for all Toyota parts centers in the future.

The 374,000-square-foot facility, adjacent to Toyota's new regional office, needs just 46 employees to manage the flow of about 1 million parts, an inventory valued at $50 million.

The center expects to fill 1.3 million order lines from 114 Toyota and 20 Lexus dealers in a five-state region by the end of this year. An order line is one line on a dealer's parts order form.

Toyota's goal for the new center is a 97 to 98 percent fill rate for orders. In addition, this fall the center will become the source for seldom-ordered parts for Toyota and Lexus dealers throughout the country.

Late this year, it also will begin filling orders from Toyota Industrial Equipment dealers, who sell forklift trucks and skid steer loaders.

The key to doing so much with so little is computers:

- Bar-code scanners, both stationary and hand held, track inventory from the moment it arrives until it leaves the parts center.
- Parts-picking lift trucks are equipped with radio frequency terminals that instantly broadcast stock information to the center's computer.
- A system for fast-moving parts, designed by Stanley Vidmar, automatically retrieves containers from one of three rotating storage shelves and delivers them to a packing station.

Parts arrive at the center by truck. Each part's bar code is scanned upon arrival, with small parts placed in tote bins and routed by conveyors to the rotating rack for storage.

The three multi-level racks that make up the rotating rack area have 32,278 part storage locations. Each rack is 22 feet high and 100 feet long and can store 800 bins over eight levels.

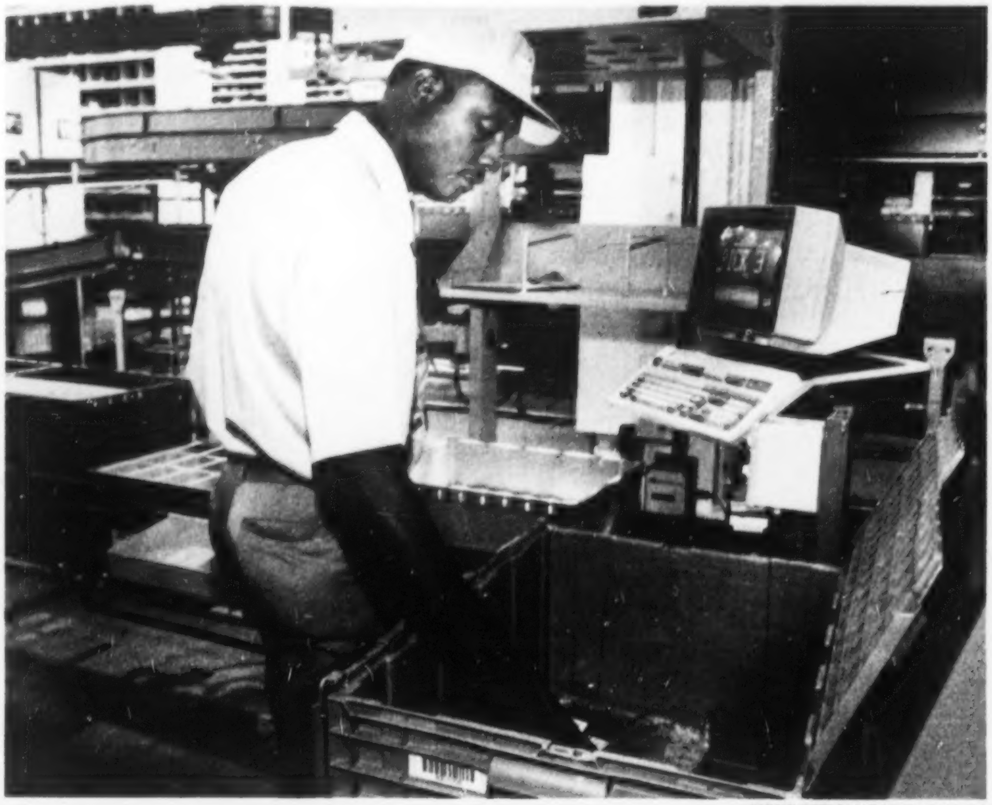
Eight inserters/extractors can handle up to 720 containers per hour, with each container having up to 15 storage compartments.

Containers travel by conveyor to a work station. A light beam shows a worker which compartment to pick from. The worker confirms to a computer the number of parts removed. The tote is then returned to the rack, not necessarily in the location it was pulled from.

Large parts are placed on pallets and moved to storage shelves by forklift trucks. The trucks navigate the 72-inch aisle between storage racks with the help of guide wires buried in the floor.

Toyota had four objectives in designing the parts distribution center, said Richard Gallio, vice president of parts, service and U.S. products:

- Improve accuracy in filling dealer orders.
- Improve operating efficiencies.
- Test new technology.
- Create a safe and pleasant work environment. AN



JOE WILSSENS/AUTOMOTIVE NEWS

A spotlight shows Toyota parts center workers which container bin to pick parts from. The container is then automatically sent back to one of three rotary storage racks. Each container can hold up to 15 storage bins.

Service business off in May

DETROIT — Parts and service business at new-car dealerships in May was down from business in May 1991, according to a survey of dealers.

The Automotive News Service Index shows that repairs and parts for the month totaled 97.4 percent of the figures for a year earlier.

But at the same time, parts and service business for the first five months of 1992 showed an increase of 1.8 percent over the same period in 1991.

The largest declines in May were in repair orders written, down 8 percent; total labor sales, off 6.5 percent; and gross profit on all labor and parts and accessories sales, down 3.5 percent.

Slight increases were noted in shop parts sales and sales of all parts and accessories.

For the year to date, shop parts sales rose 4.5 percent, and sales of all parts and accessories were up 4.2 percent. Gross profit on all labor and parts and accessories sales is up 1 percent for the period. But repair orders written fell 1.7 percent and total labor sales were off 1.3 percent for the year to date.

Some dealers blamed the continuing slump in the showroom for the parts and service decline in May. One dealer attributed a drop in repair orders and hours due to training of new service writers.

Of those dealers reporting an increase for the month, some cited better internal cost controls and an increase in dollar sales per repair order.

Figures used in the Service Index are compiled from a cross-section of new-car dealerships. AN

SERVICE INDEX
97.4★

	May, '92 vs. May, '91	Jan.-May, '92 vs. Jan.-May, '91
Gross Profit on All Labor and P&A Sales	− 3.5%	+ 1.0%
Repair Orders Written	− 8.0%	− 1.7%
Total Labor Sales (Customer & Warranty)	− 6.5%	− 1.3%
Shop Parts Sales (Customer & Warranty)	+ 0.2%	+ 4.5%
Sales of All P&A	+ 0.1%	+ 4.2%

★ Survey by Automotive News shows that dealers' service and parts business in May 1992 was 97.4 percent of business in May 1991. Service business in 1992 was 101.8 percent of business in the corresponding period in 1991.

Stocked shelves a key to parts sales, study finds

New-car dealerships need well-baited hooks and loads of attractive lures when fishing for sales of optional equipment.

Product availability is the main reason new-car customers buy upgrade options from dealers, according to a market study for the Specialty Equipment Market Association.

Availability was the deciding factor for 50.3 percent of option shoppers — clearly indicating the value of having goodies in stock and ready to install.

That's nearly twice as important to people buying cars from dealers as it is to aftermarket shoppers. Only 25.8 percent of the latter rated availability as important.

That puts the burden on the dealership sales personnel to know as much about options as they do about vehicles.

Product knowledge, at 12.5 percent, ranks high in motivating consumers to purchase add-on equipment from car dealers. Price has less importance to consumers purchasing from car dealers than it does elsewhere.

New models key to China's future

RICHARD JOHNSON
Staff Reporter

BEIJING — China's auto industry will reach an important new phase by mid-decade with the addition of the first two models designed specifically for the local market by foreign manufacturers.

Both Shanghai Volkswagen Automotive Co. and Chrysler Corp.'s Beijing Jeep joint venture are preparing new models for China.

Shanghai Volkswagen will develop a mid-sized sedan, and Beijing Jeep is readying an American-designed replacement for the outdated, Russian-design BJ2020 Jeep-like vehicle — a fixture on China's streets and roads.

Shanghai Volkswagen's new car will be produced at its expanded facilities in Shanghai beginning in 1995. The joint venture is owned equally by the German carmaker and Shanghai Automobile Industry Corp., which recently ended production of the 30-year-old Shanghai sedan at an adjacent plant.

Shanghai Volkswagen builds the Santana, the notchback version of the previous-generation Passat, and will continue parallel production after the new model launch.

A new, larger sedan is being designed with VW's Brazilian subsidiary and will be based on the current-generation Passat, which is not built in China. The wheelbase will be extended 3.5 inches, and the car will get an all-new body.

The joint venture plans to produce 90,000 of the new cars a year out of a total planned production of 150,000 after 1995.

Volkswagen hopes to use its China operations as a bridgehead for exports to the Asian market.

"This is the first step to develop a car by ourselves," said Stefan Messman, Shanghai Volkswagen's deputy managing director.

Beijing Jeep also will introduce a new off-road vehicle that will eventually replace the ubiquitous BJ2020, the over-40-year-old vehicle that has both civilian and military applications in China. Beijing Jeep also builds the Cherokee.

The new model, due in about 1995, will be based on the Jeep Wrangler, but it will have an all-new body. Initial design is scheduled to be completed in about nine months by Visioneering Inc., an engineering firm based in Fraser, Mich.

The new model will have four doors, four-wheel drive and easy access to the rear: "a breed in between the Cherokee and 2020," said J.J. Powers of Chrysler Corp.'s International Operations office for China and Southeast Asia.

The existing BJ2020 will be replaced about three years after the new model is introduced.

In a related development, Western executives here say Chinese officials are soliciting proposals for local assembly and importation of minivans and small buses.

"There is a big push in the Chinese market for minivans," said Powers. "They are all looking for minivans. Japanese and American minivans."

Since minivans are not part of China's current auto-industry plan, foreign companies may be reluctant to become ensnared in manufacturing ventures.

"These kinds of vehicles are getting more and more important," said Yang Shi Min, an engineer with China National Automotive Industry Corp. "We need them for the intercity traffic."

The first taker could be Beijing Jeep, which hopes to start assembling the Dodge Caravan in 1993.

"It's kind of behind closed doors, but we definitely want to," said Powers. "We haven't signed an agreement, and it is still in the wishing stage."

But a Beijing Jeep executive sounded more definite. He cited plans to begin assembly of Caravan kits next year, starting with only 500 units in 1993. Depending on market response to the Caravan, he said Beijing Jeep will decide whether to increase production and localize parts.

Beijing Jeep has other plans in the works. The Grand Cherokee was once planned to replace the Cherokee, but now may be built in tandem with the smaller vehicle, said Powers. Beijing Jeep is considered much more likely to begin assembling minivans in China before taking on the Grand Cherokee.

"We don't know if we are going to do the Grand Cherokee," he said. "It is in the product plan, but to look at it, not necessarily to do it."

Hanoi slated as newest host on world auto-show circuit

RICHARD JOHNSON
Staff Reporter

BEIJING — This city might seem like an unlikely locale for an international auto show, but an even more out-of-the-way destination is on the exhibition calendar for next year: Hanoi.

Vietnamese officials made the rounds at this year's Auto China exhibition to drum up interest in their country's first international auto show.

The April 6-10 exhibition would be off-limits to Americans under current U.S. trade law. However, the embargo on trade with Vietnam is expected to be lifted after the U.S. presidential election.

"It will be an excellent opportunity to understand the Vietnamese automotive market," said Hoang Ngoc Ninh, coordinator of industrial affairs in Vietnam's Ministry of Transport and Communications. He addressed industry executives at a reception here.

"It is a very promising market. The number of vehicles for the population is still rather low."

Vietnam imposes a 100 percent tariff on passenger cars and a 50 percent tariff on components.

According to the ministry's figures, Vietnam has only 118,675 motor vehicles on the road. The total includes 60,321 trucks, 11,815 passenger buses and 20,485 cars. The population of Vietnam is about 68.5 million.

Prior to this year, the Vietnamese auto industry consisted of reconditioning factories and a few components makers.

But two joint ventures with foreign manufacturers are being put into operation this year: Mekong Co. and Vietnam Motor Co.

Mekong Co. is a multinational joint venture with two plants.

A plant in Binh Chanh on the outskirts of Ho Chi Minh City, the former Saigon, is assembling four-wheel-drive vehicles from kits imported from South Korea's Ssangyong Motor Co. The venture also assembles special-duty trucks, including trucks over eight tons, construction vehicles, tractors, refrigerated trucks, ambulances and fire engines.

Current capacity is 5,000 vehicles per year, and production is expected to reach 2,000 units this year. Production at the company's two factories is scheduled to reach 10,000 units in 1994.

A second factory, the Co Loa facility in Hanoi, assembles light trucks under five tons and 50-seat buses. Production is due to begin by the end of the year.

The second joint venture, Vietnam Motor Co., is a small-car joint venture with Columbian Motors Corp., which is itself a joint venture company assembling Daihatsu, Mazda and Kia models in the Philippines.

The Hanoi-based company is 51 percent owned by Columbian, said Luong Tat Thang, of the Ministry of Transport and Communications.

Production is scheduled to begin this year and reach 2,000 units a year in 1993.

Nguyen Duc Hiet, a legal specialist with the Ministry of Trade and Tourism, said foreign companies are permitted in Vietnam.

"We are committed to continuing our open policy," he said. "And we are committed to improving our investment environment for foreign companies."

May Mexico sales rise 3.4 percent despite drop by Volkswagen

MEXICO CITY — Despite a big drop by industry leader Volkswagen, Mexico's five carmakers still boosted car and truck sales by 3.4 percent in May.

VW sales were off 20.2 percent, dragged down by a changeover to the new Golf and Jetta. Production of VWs built for the Mexican market dropped 29.9 percent in May, as VW built only 190 Golfs and Jettas. The two new cars went on sale in Mexico last month.

Aside from Ford, every other company posted double-digit gains for the month.

Chrysler, which has had a very strong year, continued on track with a 30.8 percent gain over May 1991. Its Shadow, Spirit and New Yorker models are all well ahead of last year's pace.

Sales of imported cars continued to decline. Mexico's five automakers sold 701 imported models in May, down 13.2 percent. For the year, imports are off 36.7 percent.

The reason: Manufacturers are using their foreign currency to import components instead of vehicles, explains the Mexican automobile dealers association.

Mexican rules require automakers to earn import credits by exporting Mexican-made parts and vehicles.

MEXICO CAR AND TRUCK SALES

Mexico plant to move

JAMES BLEARS
Special Correspondent

MEXICO CITY — Chrysler Corp. plans to close its 54-year-old truck plant near Mexico City and relocate it further away from the polluted urban center.

The plan echoes an announcement by General Motors in March that it would move its truck plant 200 miles from Mexico City rather than spend money for expensive new pollution controls.

The Mexican government has encouraged industries to relocate as a way to curb the city's chronic air pollution problems. On the worst days, plants have been ordered to shut down.

Chrysler spokeswoman Karen Stewart in Detroit said the relocation would allow the company to install new technology and improve efficiency.

Chrysler gave no details on where the new plant will be and when it will be open.

The current plant is in Lago Alberto, a heavily polluted industrial suburb northwest of Mexico City. The plant produced about 62,000 trucks last year, including Ram pickups and Ramcharger sport-utilities for the United States.

Governors rally for ethanol

GWENDOLYN ZONGHETTI
Special Correspondent

General Motors presented the nation's first certified ethanol fueled car last Monday at a State Governors' Ethanol Coalition and National Alternative Fuel Conference in Milwaukee.

The Chevrolet Lumina Variable Fuel Vehicle is the first of a 50-car ethanol fleet to be distributed among Wisconsin, Illinois and the U.S. Department of Energy.

GM, Chrysler Corp. and Ford Motor Co. are developing ethanol-powered cars as part of their efforts to develop vehicles that are powered by alternative energy sources.

Each automaker displayed their alternative fuel vehicles at the conference.

The Senate Finance Committee reported out of committee a bill that would provide tax incentives to buyers of alternative fuel vehicles, as well as tax benefits that apply to the fueling infrastructure.

Linda Stuntz, acting deputy secretary of the Department of Energy, told the conference her department is doing its part by researching and developing new sources and technologies for alternative fuels. Two key factors are to expand the infrastructure for the vehicles and reduce the cost of the fuel.

In prepared remarks, the chairman of the coalition, Nebraska Gov. Ben Nelson, told the conference the 17-state coalition of governors must discuss how to increase long-term ethanol use. "Unless something is done, most of the oxygenates the nation needs to satisfy the Clean Air Act amendments will be in the form of methanol imported from OPEC countries," said Nelson.

Spokesman Larry Hart said the Energy Department will work with state energy agencies to compile a five-year purchasing plan for alternative fuel vehicles.

BMW

Dealer ads to tout local production

continued from PAGE 3

U.S.A. Nissan and Toyota manufacture cars in the United States, but neither builds luxury models here.

Joy, who sells about 15 new cars a month, was planning to move the dealership to a larger site even before the plant announcement. Now he'll need the room, he realizes.

"There will be a lot of hometown loyalty here in Greenville," he says. "Our business has to go up."

He says he's not just talking about plant managers who might be able to afford a BMW. "Greenville is the kind of place where people really get behind something like this and support it," says Joy. "A lot of people here are like me. They want to keep their money in Greenville."

Even Terry Wall, who owns Greenville's Lexus and Infiniti dealerships, thinks people will be buying more BMWs. But he remains upbeat on the BMW invasion. "The overall effect will be good for all lines, from entry level to luxury," says Wall, who himself owns a BMW dealership in Augusta, Ga. "Michelin Tire has its North American headquarters here, but not everybody buys Michelins."

BMW expects to employ about 1,000 people initially, and about 2,000 by the decade's end to build up to 75,000 cars a year. The only other vehicles produced in the state are Mack trucks in Winnsboro.

The nearest BMW competition for Joy's 20-year-old dealership is about 50 miles away across the state line in Fletcher, N.C. Another store is about 100 miles away in Charlotte, N.C.

SURVEY

Saturn, Jaguar join J.D. Power elite list

continued from PAGE 3

Jacobs. "These franchises set up training programs, and performance standards are in place from the word go. They are structured to avoid mistakes."

David Cole, director of the University of Michigan's Office for the Study of Automotive Transportation, said the most significant thing about the survey is the gap between some of the higher scores and mid-range scores is not that wide.

For instance, there were only 11 points between 6th place Toyota at 144 and 11th place Oldsmobile at 133. The industry average was 129.

Ninth place Honda scored 138 and had only a seven-point lead over 16th place Buick.

The narrowing perception gap among consumers have some Japanese manufacturers worried, said Cole. "The one thing the Japanese developed their customer base on is quality," he said.

"If the quality gap closes, maybe customers will look at other factors such as where was (the vehicle) built or corporate citizenship, that is, the role of that company in a societal sense."

Jaguar, which has a reputation for being long on style and short on reliability, pushed its way from 25th place to 10th place in the most recent year report.

John Crawford, Jaguar Cars Inc. spokesman, credits the dramatic improvement to the restructuring the company underwent about a year ago.

The changes included training dealers in customer handling and improving the quality and reliability of its cars.

"We are absolutely thrilled" about the survey results, said Crawford.

"When our quality was not so good, the dealers performed well — we had a reputation for good customer satisfaction," he said. "Now, we've improved the quality of the car and are becoming measurably better."

The top individual model CSI scores mirrored those of the top car lines. The Lexus LS400 finished first and the Lexus ES250 placed second. The Infiniti Q45 took third and the Infiniti G20 was fourth. The Saturn SL sedan was fifth.

In the light-truck portion of the survey, Toyota remains in first place, followed by Nissan. Oldsmobile, the highest ranked domestic light-truck line, moved from 13th place last year to third place this year.

Chrysler, second in the light-truck survey last year, was not among this year's top eight.

FORECAST

Analysts expect sales to rise in '93

continued from PAGE 1

strong this year.

Through June 20, new-vehicle sales were ahead of last year, with truck sales showing the most promise.

Cars were up 0.5 percent, but trucks were 10.8 percent ahead of their 1991 total. Combined car and light-truck sales were up 4.0 percent.

Analysts downgraded their predictions for 1992 because retail sales in the first quarter were weaker than expected, coupled with a reduction in fleet sales.

Michael Luckey, analyst with the Luckey Consulting Group in Westwood, N.J., said customers have deferred purchases and will come back into the market when personal income shows real growth.

Analysts also predict domestic automakers will continue to gain market share because of higher sticker prices on Japanese products and the improved quality of domestic vehicles.

"Pricing is in favor of the domestics," said Jack Kirnan, analyst with Salomon Brothers in New York. "The domestics have a $2,500 price advantage over Japanese vehicles. That pressure will continue unless the Japanese economy improves."

New CAW head takes aim at trade pact

Hargrove faults government policy

JEREMY SINEK
Staff Correspondent

BRAMALEA, Ontario — Three days after becoming head of the Canadian Auto Workers, Basil "Buzz" Hargrove challenged his government's policy toward Japanese automakers.

In a speech at the Job No. 1 celebration for Chrysler Corp.'s LH cars, Hargrove protested provisions of the 1989 U.S.-Canada Free Trade Agreement.

He cited rules that require automakers in Canada to have at least 50 percent U.S. or Canadian content in order to ship without duties to the United States. His audience included Canadian political leaders, notably Michael Wilson, federal minister of Industry, Science and Technology.

"It appears the Japanese companies are setting the stage for auto policy in Canada," said Hargrove. He said his government needs to join with the Big 3, the CAW and the UAW in saying that North American content levels have to be "a lot higher" than 50 percent.

"We shouldn't be catering to people who are major players in our market but minor players in our economy," he said. Honda, Toyota and Korean maker Hyundai have non-union assembly plants in Canada.

Hargrove was elected June 27 to succeed Bob White, the CAW's founding president. White is now president of the Canadian Labor Congress. Hargrove, who ran unopposed, has been White's assistant since 1978.

In his acceptance speech, Hargrove warned employers not to expect any change of direction at the CAW: "We are committed to progress for workers at the bargaining table and on the political front, in spite of the difficult times we are in."

1ST CAR

Early LH build to go mainly to dealers

continued from PAGE 3

LH, an Eagle Vision, Iacocca said Chrysler has made a three-year leapfrog over its competition with the new sedans.

Iacocca's first customer last week was Peter Robertson, mayor of Brampton. Robertson took delivery of a maroon Chrysler Intrepid, which replaces a leased 1991 Buick Roadmaster.

"The Chrysler's a cheaper lease," he said.

In Canada, Chrysler has only two divisions: Chrysler-Plymouth-Dodge and Jeep-Eagle. So the company will badge the LH cars in Canada as the Chrysler Intrepid, Chrysler Concorde and Eagle Vision.

In the United States, the Intrepid will be sold with a Dodge nameplate.

Iacocca said the LH will have an edge over the competition because the Ford Taurus, Honda Accord and Toyota Camry won't be changed significantly until 1995.

"They'll take two or three years to change, and then they'll all be cab-forward. I predict it," he said. "We've got a whole new automobile platform that's cab-forward today and as innovative for us as the K-car and the minivan were."

Iacocca implied that prices will range from $18,000 to $20,000, saying the LH cars will have "very, very affordable prices."

He also discussed changes the company would like to see in customer relations in some dealerships.

"When people come in to spend $20,000 of anything," he said, "they don't want to be hassled and they don't want to feel like they're going to the dentist. They want it to be a nice experience, and we haven't made it that way for many years.

"We expect to be world-class. We expect to be up there with the best of them. If we're in the $18,000 to $20,000 range, we want to ask the buying public, 'Why buy a luxury car like a Lexus or Infiniti at $42,000? What's it got that we don't have?'

"If they say, 'Its quality,' then our quality will have to be at that level.

"The track is fast. Quality improvements are continuing, but we think we have everything in place that will make this car world-class," he said.

Iacocca acknowledged the temptation to accelerate LH production to meet demand, but startup will be slow and driven by a need for quality.

He said the launch of the 1994 Chrysler New Yorker, which will be built off a stretched version of the LH platform, is slated for February 1993.

ROLLOVER

Safety standards due by December

continued from PAGE 1

can Suzuki Motor Co.

Last April, the Ford Bronco II came under fire in a report from the Insurance Institute for Highway Safety. The group said Bronco II death rates were three times those of the Samurai. Ford doesn't make the Bronco II anymore, but the company still faces years of litigation over the issue.

Researchers haven't been able to sort out exactly what roles the vehicle, the driver and the road conditions play in fatal rollovers. So in the absence of sound science, automakers worry that new rules might force them to change the design of their vehicles or, worse, pull models off the market.

"Quick fixes or banning vehicles won't solve the problem," said Dale Dawkins, director of vehicle compliance and safety affairs at Chrysler Corp.

Evidence shows that bad driving contributes to most rollovers. More than 80 percent follow a similar scenario — a vehicle leaves the road and flips over.

Alcohol, young drivers, rural roads and curves contribute to rollover deaths. But bad weather and road surface aren't significant factors.

In addition, most of the occupants killed in rollover crashes aren't wearing seat belts. Two-thirds of them are thrown from the vehicle.

Those findings buttress industry arguments against setting rollover standards or mandating design changes.

A vehicle can get a bad rollover record because of the kinds of drivers who choose that model, rather than the vehicle's design, argues Robert LeFevre, manager of crash avoidance at General Motors. "We cannot ignore the dominant role of driver characteristics in rollover," LeFevre told an SAE meeting in Washington last spring.

So GM, Chrysler and Ford Motor Co. have urged NHTSA not to impose new regulations on auto manufacturers.

Instead, the automakers say, the agency should expand its education and enforcement programs aimed at increasing seat-belt usage and reducing drunk driving. GM has proposed uniform warnings — such as those currently required on sport-utilities — to alert owners to the risks of rollover. NHTSA seems ready to go along with the automakers in keeping consumer options open.

BAN IS UNLIKELY

There is no question that sport-utilities have high rates of rollover fatalities, Felrice said. But because of their relatively small number on the road, sport-utilities account for only about 700 of the 10,000 annual deaths.

"Just tinkering around with utility vehicles will miss the big picture," Felrice said.

So an outright ban on rollover-prone vehicles is unlikely. And almost all interested parties agree that increased emphasis on driver education and safety will help reduce rollovers.

But the agreements end there.

The Big 3 have opposed NHTSA's proposals to make vehicles less likely to roll over — and safer when they do roll over. Chrysler officials have argued that current rules for roof strength and safety belts already help reduce rollover injuries.

The agency also suggested that only vehicles that score poorly on tests be required to add protection for occupants.

But Brian O'Neill, president of the Insurance Institute for Highway Safety, disagreed. O'Neill said that since all models are involved in some rollovers, all should be made safer.

Some of NHTSA's proposed changes would reduce the likelihood of occupants being thrown from the vehicle, the cause of more than half the deaths in rollovers. Those changes include improved safety belts, better glazing to keep windows from shattering and better latches to keep doors from flying open.

ROOF CRUSH DEBATE

Much of the talk about standards focuses on roof crush resistance and interior roof padding.

The roof is the primary source of injury to occupants in a rollover, whether or not they are wearing safety belts, said A.C. Malliaris, a researcher at Data Link Inc. A study by NHTSA engineers in 1989 showed that the more the roof is crushed, the more likely there will be injury.

Automakers argue that current standards for roof crush are adequate. In fact, Chrysler said some roof crush is good because it softens the crash much in same way that front-end crush space softens a frontal collision.

Donald Friedman, a former NHTSA engineer now in the private safety consulting business in California, said occupants are four times more likely to be injured when riding near an area of roof crush. Another study suggested that the current roof crush standard — a roof must hold 1.5 times the weight of the vehicle — should be increased to three to four times the vehicle's weight.

RESTRICT ALTERATIONS

Other areas have been cited as targets for regulation.

The Motor Vehicle Manufacturers Association has suggested restrictions on aftermarket alterations that add to the risk of rollovers.

There is evidence that anti-lock brake systems help prevent rollovers by giving drivers more control in emergency stops. ABS is becoming more popular with consumers, but it won't have a major impact on rollovers for several more years, Felrice said.

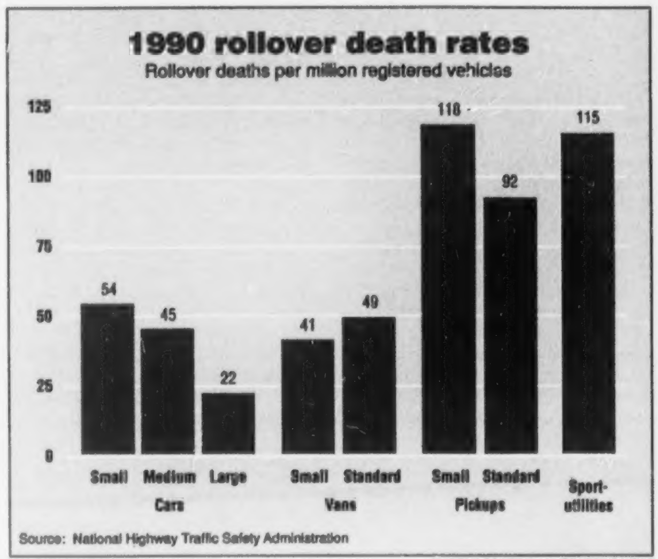
NHTSA also is looking for ways to identify rollover-prone models and perhaps set minimum standards for stability.

But first, the agency needs an acceptable yardstick for stability, and that has proved elusive.

A moving test would be the most accurate for judging a vehicle's stability, but so far no reliable method has been devised.

So NHTSA favors the so-called tilt-table test, in which a vehicle is placed on a platform that is tilted gradually until the wheels on one side are raised. According to the premise of the test, the further the vehicle can tilt before its wheels come off the table, the less likely it is to roll over.

NHTSA found that models that tended to have a high percentage of rollovers in single-vehicle accidents were the models that tended to tip sooner in the tilt-table test.



MARTHA GRATTAN / AUTOMOTIVE NEWS

NHTSA dealing with rollovers since '70s

MAX GATES
Staff Reporter

WASHINGTON — Although no federal standards apply specifically to rollover prevention, the government has addressed the issue frequently in the past.

In 1984, the National Highway Traffic Safety Administration required that all multi-purpose vehicles with off-road features carry warnings on a sticker and in the owner's manual. The messages say the vehicles handle and maneuver differently than ordinary passenger cars.

Other action on rollovers includes:

- In 1973, the agency sought comments on possible test standards for rollover resistance. NHTSA concluded that rollover resistance could be measured, but decided not to act until it better understood how real-life factors, such as how the vehicle is operated, contribute to rollovers.
- In 1987, NHTSA denied a request to set minimum standards for rollover resistance. The agency said the measurements weren't reliable in predicting which vehicles would roll in real-life situations.
- In 1988, NHTSA granted a petition from Consumers Union to set a minimum stability standard. NHTSA was conducting research toward that goal when Congress set the current 1993 deadline.
- NHTSA has also investigated possible rollover-related defects in five sport-utilities.

Two petitions, in 1979 and 1981, called for investigations of the Jeep CJ-5. NHTSA found no specific defect that was causing rollovers.

In 1988, NHTSA was asked to investigate rollover rates in the Suzuki Samurai. After a preliminary investigation, NHTSA said fatal rollover rates for Samurais were no higher than for other sport-utilities.

NHTSA noticed during the Suzuki investigation that the Ford Bronco II seemed to have high rollover rates. Agency engineers analyzed the Ford Bronco II in 1989 and later did an extensive data analysis of Jeep CJ accidents. Both probes were later closed.

MAZDA

Marketing pitches woo women

continued from PAGE 1

talk to these women, especially affluent professional women. We're not pandering to women with our programs; we're just getting involved in their issues."

One program, Mazda's Golf Clinics for Executive Women, deals with two women's issues. It helps women break into the "old boy" golf network for business, and it benefits breast cancer research.

Mazda ran the first clinic last year at the women's golf tournament it sponsors, the Mazda LPGA championship held annually at the Bethesda Country Club in Bethesda, Md. This year, it will conduct six clinics; at the first two, it raised $40,000 for the Susan G. Komen Breast Cancer Foundation.

MOVING UPSCALE

With the introduction in the past 12 months of the new 929, RX-7, MX-3, MX-6 and 626, Mazda's lineup has moved upscale. Upscale and sporty segments are traditionally viewed as male-dominated, but Mazda identified upscale professional women as a target for the new vehicles, and it appears to be having some success.

The clinics are marketed directly to the target audience. Mazda invites about 300 women to each one, getting their names from the National Association of Women Business Owners. It also advertises the clinics in local newspapers and *Golf for Women* magazine. The clinics include instruction and exhibitions by pros of the Ladies Professional Golf Association.

Laurel Rolls, a 40-year-old accountant from Los Angeles, looked at it more pragmatically. "From a product or marketing perspective, it makes a lot of sense. Most companies are only trying to sell us cheap economy cars or minivans. They don't seem to realize that we're interested in a lot more than that," she said.

Mazda follows up the clinic with a letter from Thompson to each participant along with a survey and a test-drive incentive — a $75 gift certificate for golf merchandise for taking a test drive, $500 if the woman buys a new Mazda. The names also go into a data base and Mazda tracks them against purchases in each market.

Mazda's advertising is aimed about a 50-50 split between men and women, a change from the past. In 1988, said Kim Adams, advertising manager, Mazda had no ads in women's magazines; now it buys a schedule in 12.

At other companies, Nissan and Mitsubishi, for example, the marketing approach is different.

Both those importers say they don't have any programs specifically designed to attract women buyers. Both suggest that instead of trying to target women directly, they simply hope to capture more women by broadening their appeal. In other words, by moving from sports to prime time, they will automatically pick up more women because they are reaching a bigger, more varied audience.

"Our strategy is product-focused. If the product has attributes that will appeal to women buyers, then we'll make sure to mention those attributes," said Jules Clavadetscher, general marketing manager at Nissan Motor Corp. in U.S.A. He doesn't think women want to be hit over the head with a message tailored just to them.

"I don't think we need to send out free lipstick samples to get women into our showrooms."

At Mitsubishi Motor Sales of America Inc., even though the director of advertising is a woman, the approach is closer to Nissan's.

Frances Oda said that when her company wanted to increase sales of the Eclipse, it knew women would be a key target.

"We didn't set out to get more women, but to get more buyers. But we knew that women were an untapped market for the Eclipse," she said. "So, we moved away from the concerted emphasis on performance and more onto value and styling."

Both Clavadetscher and Oda believe that products, more than programs, will bring women into their showrooms. Clavadetscher is counting on the Quest minivan and the new Altima. Oda is betting on the new Galant, due next year.

It is not surprising that at Mazda, Thompson has spearheaded a lot of its efforts toward women. But she is not alone. Of the 14 managers in the marketing division, 7 are women, including the ad manager and head of merchandising and market planning.

"We're not trying to have any certain number of women," Thompson said. "But you can't tell me that a department of all men is going to come up with the same ideas as a group that's half men and half women."

FEMALE BUYERS, BY COMPANY

Some companies track their customers by principal driver, some by buyer and some by primary decision maker, so figures may not be precisely comparable.

Company	Percent
Mazda	52.3
Honda/Acura	51.3
Chrysler	50.0
Nissan/Infiniti	49.0
Toyota/Lexus	48.0
General Motors	45.0
Mitsubishi	43.0
Ford	32.0

Lawmakers tweak trade bill

MAX GATES
Staff Reporter

WASHINGTON — House Democrats were trying to put more teeth into their anti-Japan trade bill last week, circulating an amendment that would cap Japanese-car imports to Japan's current limit of 1.65 million vehicles a year.

The new version, authored by House Majority Leader Rep. Richard Gephardt, D-Mo., specifically exempts Japanese transplants from the limits. A previous proposal, which was dropped from the bill approved in committee two weeks ago, would have held imports and transplant production at current levels for the next seven years.

The bill would force the Japanese to keep their pledges to buy more U.S. autos and auto parts, made during President Bush's trip to Tokyo last January.

A vote by the full House on the trade bill is expected this week.

Meanwhile, Senate Finance Committee Chairman Lloyd Bentsen, D-Texas, has scheduled hearings on a Senate version of the trade bill for late July.

In other issues:

- The House vote on a tariff bill, which includes a reclassification of Japanese multipurpose vehicles, is not expected until late July, after the Democratic National Convention. The reclassification would raise the tariff on imported minivans and four-door sport-utilities from 2.5 percent to 25 percent.
- The House was expected to approve a tax bill that dropped the luxury tax on everything but cars. The 10 percent tax is applied to the price of a new car in excess of $30,000. The House bill would index the tax, raising the $30,000 base to keep pace with inflation.

The Senate Finance Committee approved similar legislation last month. Importers, who have argued the tax cut into sales, have been hoping for total repeal. ■

Consultants evaluate GM parts divisions

JACK KEEBLER
Staff Reporter

General Motors' Inland Fisher Guide and Delco Remy divisions confirmed last Thursday that they are under scrutiny by independent financial consultants A.T. Kearney.

Patricia Molloy, a spokeswoman for Inland Fisher Guide, said it was not unusual to hire an outside firm to examine GM products, processes and plants.

"They're evaluating us against the competition," said Molloy. "It's a continuous process of benchmarking with the emphasis on evaluating the products we produce like bumpers, seats, body hardware and interiors."

Delco Remy spokesman Keith Pitcher agreed that it was normal operating procedure.

"They're looking at each of our product lines," said Pitcher. "It's a worldwide study that will probably take about six months to be completed.

"But no, it is not at all unusual to call on outsiders. We've had a number of outside consulting firms come in here in the six years I've been here."

The Wall Street Journal reported last week that the Kearney examination was part of the parts-supplier shake-up GM is conducting under the company's worldwide purchasing chief J. Ignacio Lopez.

The newspaper said the study is due to be completed early next year.

Pitcher said he knew of no direct connection between the Kearney review and anything Lopez is doing. ■

'93 Capri and Festiva get Ford rebates

ARLENA SAWYERS
Staff Reporter

Ford Motor Co. announced a new consumer rebate program that includes payments on more 1993 cars and revisions on 1992 vehicles. The program is effective July 1 through Sept. 23.

The rebates range from $400 to $2,000 on Ford, Lincoln and Mercury cars and $300 to $1,300 on Ford trucks. Some rebates vary by region.

In lieu of rebates, consumers may choose finance rates of 2.9 percent to 7.9 percent.

New to the program are the 1993 Mercury Capri and 1993 Ford Festiva at $500. They join the 1993 Ford Escort and Mercury Tracer.

On 1992 models, Ford increased the Lincoln Mark VII rebate from $1,250 to $2,000. In addition, the rebates on the Ford Thunderbird and Mercury Cougar were bumped from $1,000 to $1,500.

The rebate on F-series pickups was reduced from $400 to $300.

Mercedes-Benz's special "Win-Win" lease program on 1992 cars, which was to expire June 30, was extended. Under the program, for example, the monthly payment for the 300SE is $865.98 for 36 months and the monthly payment for a 500SEL is $1,232.42 for 36 months. The program runs indefinitely. ■

SUBARU (1992 models, expires Aug. 3)	
Loyale (fwd sedans)	$500
Loyale (awd wagons)	$500

Mazda names new sales president

LOS ANGELES — After overseeing the launch of eight all-new products as president of Mazda Motor of America Inc., Yoshinori Taura, 53, has returned to Japan to become assistant to the senior managing director in charge of all foreign sales and marketing.

The new president of the U.S. sales arm is Toshio Wakiya. The 51-year-old Wakiya is familiar to the staff at Mazda's Irvine, Calif., headquarters, where he was senior vice president and deputy general manager from 1988 to 1990. Most recently, Wakiya was general manager of Mazda Motor Corp.'s North American sales and marketing division.

Taura: back to Japan

Taura was the first president of Mazda's consolidated U.S. operations, which were formed by the merger of eastern and western distributorships in 1988. He first worked in the United States on the task force that prepared Mazda to enter the market in 1970. He has also worked for Mazda in Europe and Japan.

Under Taura, Mazda has introduced the MPV, Miata, Navajo, MX-3 and new editions of the MX-6, 626, 929 and RX-7.

Fiat anticipates profit for '92

LUCA CIFERRI
Staff Correspondent

TURIN, Italy — Fiat Group, the parent of Fiat Auto S.p.A., said last week that it expects to remain profitable this year with the boost of an 860 billion lira (about $705 million) capital gain from the sale of its remaining telecommunications units.

Although the special gain will enable the company to close 1992 with an operating profit, net income will still be below the $714 million earned in 1991, Chairman Giovanni Agnelli told shareholders at the annual meeting.

While sales this year are expected to rise slightly from 1991, to about $50 billion, the company is getting less return from every sale. According to officials, the company's first-half profit margin slid to 0.5 percent from 1.5 percent last year and net debt — which stood at $221 million at the end of 1991 — is rising.

Despite the razor-thin profits, Agnelli confirmed the group will invest some $39.1 billion in capital projects in the next five years, including $25 billion for autos. ■

Saab exec to run Opel

David Herman, president and chief executive officer of Saab Automobile AB, was expected to be named Friday as chairman and managing director of General Motors' Adam Opel AG subsidiary in Germany.

Opel's Supervisory Board was scheduled to meet to confirm Herman's appointment, according to sources in the United States and Europe. Herman, who is 46, will assume his new post on Aug. 1.

Herman: takes over Aug. 1

Opel, GM's biggest subsidiary in Europe, is headquartered in Russelsheim, a suburb of Frankfurt.

Herman replaces Louis Hughes, who was named group executive and president of GM Europe earlier this year. A replacement for Herman will be named "in the next several weeks," a source said.

Herman, who received a law degree from Harvard Law School in 1971, joined GM in 1973 as an attorney with the legal staff in New York.

He was named to his present post in January 1990. Saab Automobile AB is a 50-50 joint venture between GM and Sweden's Saab-Scania AB.

Under Herman, Saab has shut an assembly plant and shed more than 7,000 jobs in an effort to stanch a flood of red ink. The venture now employs about 8,000 workers.

The company reported in May that its first-quarter loss narrowed to $49.5 million from $160.7 million a year earlier.

Double holiday cuts build

GWENDOLYN ZONGHETTI
Special Correspondent

With two holidays and several plants down for vacation or model change, car and truck production in the United States and Canada fell 46.5 percent last week.

All U.S. plants were closed last Friday for Independence Day, and Canadian plants were closed Friday and today in observance of Canada Day.

U.S. automakers' estimated car production last week was 58,908, a decline of 50.5 percent from the prior week, but up 12.2 percent over the 1991 holiday week.

Year-to-date U.S. car production is 2,979,090, up 5.6 percent over 1991.

In Canada, car production was estimated at 19,219, down 26.4 percent from the prior week, but up 48.7 percent from last year.

Canadian carmakers have assembled 555,611 units, down 4.0 percent from last year.

Last week, truck production in the United States was scheduled at 38,371, a 50.3 percent drop from the prior week, but an 11.2 percent hike above the year-ago week.

Truck producers in the United States have assembled 2,045,261 vehicles this year, up 20.1 percent over 1991 at this point.

In Canada, last week's estimated truck production was 15,820, a decline of 36.3 percent from the prior week but an increase of 10.9 percent over last year.

Year-to-date Canadian truck production is 559,254, up 28.0 percent over the same point in 1991.

Last week's estimated daily build rate of cars and trucks in the United States and Canada was 33,080, down 33.1 percent from the prior week but up 15.9 percent over the year-ago week.

Chevrolet built its one-millionth Corvette last Thursday at the Bowling Green, Ky., plant. Chevrolet said the milestone car was assembled three weeks earlier than expected because of a surge in Corvette sales.

General Motors slated daily overtime last week at its Janesville, Wis. and Moraine, Ohio, plants. Both plants work a four-day week and scheduled overtime Thursday because of the holiday.

GM's Lordstown, Ohio, plant is closed this week for conversion of the body shop.

Chrysler's Bramalea, Ontario, plant began production of the new LH sedans. An estimated 75 Eagle Visions were scheduled for assembly last week.

Three Honda plants were on vacation last week. They are Marysville, Ohio; East Liberty, Ohio; and Alliston, Ontario. Production resumes today.

Mazda's Flat Rock, Mich., plant resumed production last week after a one-week vacation.

The Subaru-Isuzu Automotive plant in Lafayette, Ind., is down this week for plant maintenance.

All of Ford Motor Co. U.S. assembly plants are in the second week of a two-week vacation. Production is scheduled to resume July 13.

late news

Olds requires NADA class

LANSING, Mich. — Oldsmobile now is requiring National Automobile Dealers Association certification as a prerequisite for membership in its Oldsmobile Vanguard Certification Program for salespeople.

NADA officially launched its certification program in February during its convention in Dallas. Oldsmobile becomes the first General Motors division to require NADA certification as a part of the division's own certification program, said General Manager John Rock.

Rock, who said he made the move as one of his first acts at Oldsmobile, said he endorses the NADA certification program because it helps instill a higher level of professionalism in dealership operations.

Dems' ticket has CAFE flavor

WASHINGTON — Bill Clinton's selection of Sen. Albert Gore, D-Tenn., as his vice presidential running mate gives the Democratic ticket two candidates who have favored higher corporate average fuel economy standards.

Clinton has endorsed a 45-mpg CAFE standard in campaign speeches, and Gore was a co-sponsor of a bill that would have required a 40 percent improvement in fuel

Ford leads Chevy at the half

Industrywide sales rise 5.1%; Japan share drops 1.5 points

PHIL FRAME, JIM HENRY and KATHY JACKSON
Staff Reporters

In a remarkable seesaw, Ford Division snared the car sales lead from cross-town rival Chevrolet during the first six months of 1992.

Ford stretched its lead over Chevrolet in truck sales, too. The twin conquests put Ford a huge 185,790 vehicles ahead of a division it trailed just a year ago. And the switch at the top set the tone for other dramatic sub-battles over 6,491,196 first-half sales.

The Honda Accord's lead as the industry's best-selling car shrank to about a week's worth of Ford Taurus sales, now in second place. Saturn has climbed from next to nowhere to rank behind Cadillac in the standings. Chrysler's minivans annexed yet a bigger chunk of the minivan market. Lexus and Infiniti gained 20,015 sales; Lincoln lost 18,047.

June, six-month sales tables > 34, 35

On a national scale — in a half-year that rang with trade disputes and "Buy American" pitches — the Japanese lost 1.5 points of market share. The Big 3 reclaimed that and more, while the Europeans slipped a hair. Trucks did better than cars.

By June 30, overall car and truck sales had risen 5.1 percent above their dismal year-ago levels. June itself provided the year's biggest sign of promise for a recession-weary industry. The seasonally adjusted annual sales rate for June was nearly 14.0 million cars and trucks, higher than any month in 1992 or 1991.

FORD TAKES THE LEAD

Ford Division spurred much of the month's gain by selling more than a quarter million cars and trucks, a 26.6 percent increase from June 1991. Chevrolet gained, too, but by just 1.2 percent. June's surge gave Ford its 185,790 mid-year lead over Chevrolet. Half-

Chrysler's PL breaks cover

While the hoopla rages over the LH sedans, Chrysler engineers are testing prototypes of the new compact sedan, code-named PL. This spy shot shows the car's design is similar to the Dodge Neon concept car. True to the cab-forward design philosophy, the wheels are pushed toward the ends of the platform with short front and rear overhangs. Power will come from a 2.0-liter four-cylinder engine in single- and double-overhead-camshaft versions. The PL is due to be introduced in late 1993 as a 1994 model.

Rock will put Olds' future in dealers' hands

PHIL FRAME
Staff Reporter

Oldsmobile dealers will have a major role in deciding what products to sell and how many outlets the division has as it reshapes its image for the late 1990s, General Manager John Rock said.

In his first interview since taking the job April 24, Rock said he would like Oldsmobile to be more like Saturn Corp., possibly including a one-price policy.

He also believes Oldsmobile's lineup has too many models, and that Oldsmobile and its dealers can learn something from McDonald's business philosophy.

Rock said one key question is how many dealers and outlets the division needs.

"Your distribution channel has to be competitive — the same as your products. So it begs a lot of questions. Do you need 3,000 dealers, or do you need 1,000 dealers in 3,000 locations or some number in between? I don't think the factory can make that decision unilaterally," he said.

Rock wouldn't reveal his choice: "What I want or think is best is not within my power to dictate."

THOMAS GENNARA

John Rock lauds McDonald's for its quality. He helped dedicate a restaurant with an Oldsmobile theme.

What he plans to do is gather the key leaders of the dealer body, share the division's business plans and let them say what type of organization is needed.

"You could go to the extremes: Shelf space, no exclusive dealers, just thin the product line down and give me a little space on the lot and two stalls in the showroom," Rock said.

"The other (extreme) is a few dealers with a lot of locations and have them exclusive. Or, what the hell, business as usual — just become the company of

Makers try to bottle up Calif. air rules

MAX GATES
Staff Reporter

WASHINGTON — Domestic and foreign automakers have launched a two-pronged attack to prevent the spread of California-style clean cars to other states.

The automakers are trying to block the EPA from approving California's plan to implement a 10-year phase-in of progressively tighter emissions standards beginning in the 1993 model year. And last Thursday, the two major import and domestic automaker associations filed suit in federal court to stop New York from adopting California rules.

The suit, filed by the Motor Vehicle Manufacturers Association and the Association of International Automobile Manufacturers, claims that New York's new car

Ford will fix paint defects

Program to cover all truck problems

KATHY JACKSON
Staff Reporter

Ford Motor Co. is embarking on a large and potentially expensive customer satisfaction program, but it doesn't satisfy a consumer watchdog agency in Washington. The watchdog says Ford is turning its back on paint problems with F-series trucks.

Beginning later this month, Ford will go national with Owner Dialogue, a program it began in five cities last March to communicate with owners of 1987 to 1991 F-series trucks.

Tom Wagner, general manager of Ford's Parts and Service Division, said the company will notify all but large fleet owners, about 2 million owners in all.

If the customers identify any legitimate problems, paint or otherwise, the company will fix the problem at no cost to the owner. Ford will write to about 200,000 customers each month until all have been contacted.

"There's no way we can guess the cost of this program," Wagner said. "We're doing this as an effort to improve customer satisfaction."

Last month, the Center for Auto Safety charged that there are serious paint defects on F-series trucks, and that Ford is repainting some of the vehicles under a secret warranty. The center said peeling occurs over all areas of the trucks, and complaints range from chipping and flaking to large areas of paint falling off the vehicles.

Dealers say the cost to strip down and repaint an entire truck — if necessary — can range from $1,800 to $2,300.

Clarence Ditlow, executive director of the watchdog agency,

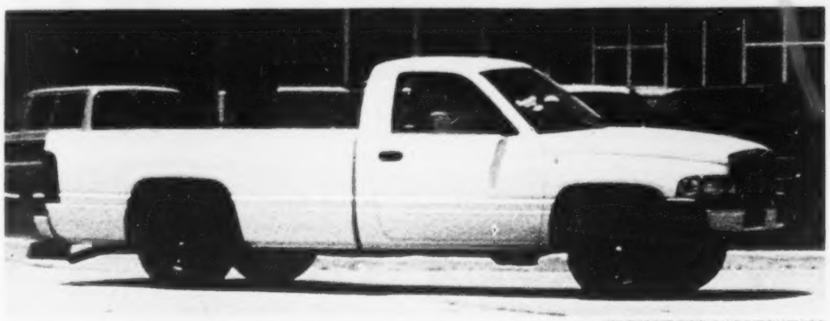
corrections

- The name of John Kalsbeek, Nissan Canada Inc.'s director of satisfaction, was misspelled in a June 22 story on Page 21.
- A June 24 article on Page 8 incorrectly reported Mazda Motor of America Inc. pickup truck sales for the January to May period. The company actually retailed 19,988 pickups during the period, compared with 21,027 a year earlier.
- A Mexican production table on Page 42 of the June 1 issue had incorrect numbers for "other truck makers." The corrected April numbers, and revised industry car and truck totals for the month, are:

	April 1992	April 1991
Trucks for Mexico...	1,564	2,243
Trucks for export....	0	1
Other truck makers .	**1,564**	**2,244**
Total industry	**88,458**	**82,920**



JIM DUNNE/POPULAR MECHANICS

Full-sized Dodge pickup gets new look

Dodge's new full-sized pickup, due for the 1994 model year, was photographed during hot-weather testing. It mimics the styling of 18-wheelers with a tall center hood and separate fenders. The new design creates room for an 8.0-liter V-10 engine in the top-line version. To free up production capacity for the T-300 at the Dodge City plant in Warren, Mich., the Dodge Dakota pickup will be moved to Chrysler's Toledo, Ohio, Jeep facility. Story on Page 37.

economy by 2001. Gore also offered a 45-mpg CAFE proposal in his comprehensive global warming bill in an earlier session of Congress.

Gore, an outspoken environmentalist, also supported the 1990 Clean Air Act amendments, which set new emission control standards, and a comprehensive energy bill, which included a CAFE increase to 37 mpg by 2006. None of the CAFE measures has become law.

Nissan and Saturn have auto plants in Gore's home state of Tennessee.

Chrysler cuts Cherokee price

HIGHLAND PARK, Mich. — Chrysler Corp. has cut the base price of the 1993 Jeep Cherokee sport-utility an average of 5.1 percent from 1992 models.

The 1993 Cherokee is available in three models: base, Sport and Country. Chrysler said it raised equipment levels also. Base prices range from $12,137 for a two-door, two-wheel drive base model to $18,533 for a four-door, four-wheel-drive Country model.

Chrysler said the base prices are $647 to $2,209 less than 1992 models.

Chrysler lowered prices to distance it from the Jeep Grand Cherokee introduced this spring.

First LH cars now go to fleet

HIGHLAND PARK, Mich. — The majority of the first 1,000 LH cars to roll off the assembly line at Chrysler Corp.'s Bramalea, Ontario, assembly plant are going to the Disney World area.

A fleet of Chrysler Concordes, Dodge Intrepids and Eagle Visions will be available later this month at rental car companies in Orlando, Fla., a Chrysler spokesman said.

Chrysler engineers and technicians will be on hand for at least a month to gather feedback and to monitor performance.

A lesser number of the cars are destined for rental car fleets in Denver.

Earlier this month, Chrysler said it would put most early-production LHs in dealer inventory.

Mazda, M-B eye hydrogen

TOKYO — Mazda Motor Corp. disclosed last week that it is talking to Mercedes-Benz AG about cooperating on development of a hydrogen-powered car.

Both companies have developed hydrogen-burning prototypes and are testing methods to store large quantities of hydrogen in a gaseous form. BMW AG also has developed a prototype.

"We are talking about communicating and exchanging ideas, not a technological tie-up," a Mazda spokesman said.

— Mary Ann Maskery

Trenton picked for PL engine

HIGHLAND PARK, Mich. — Chrysler Corp. will invest $110 million in its Trenton, Mich., engine plant for the production of a new 2.0-liter, 16-valve, four-cylinder engine.

Production of the engine will begin next fall for a new small car, code-named PL, due in early 1994.

Once production of the new engine begins, the 2.2- and 2.5-liter engines currently built at the plant will be phased out.

June sales slide in Canada

TORONTO — Canadian sales of cars and trucks fell 11.82 percent in June, the country's third straight month of double-digit decline.

As usual, cars fared worse than trucks. Car volume slipped 14.9 percent, while trucks slipped nearly 5.0 percent. Total Canadian sales reached 639,298 in the first half of the year, 8.2 percent behind 1991 levels.

Chrysler, led by light trucks, was the only Big 3 maker to increase sales in June. Mazda was the only Japanese importer to post a sizable gain for the month, up 19.2 percent.

Toyota expects fewer sales

TOKYO — Toyota Motor Corp. last week lowered its own domestic sales forecast for the year by 4.1 percent to 2.3 million units.

Similar announcements came from Honda Motor Co. and Mazda Motor Corp. in response to a 4.8 percent drop in Japanese new-car sales in the first half.

Toyota sales for the first half fell 3.8 percent to 1.17 million units.

Toyota said it is still bullish on the second half. Citing government moves to stimulate the economy, Toyota said it expects its second-half sales to rise 5 percent from last year to 1.19 million units.

— Mary Ann Maskery

Green group works with GM

NEW YORK — General Motors and the Environmental Defense Fund have agreed to work together to find ways to cut car emissions.

The environmental group supports programs to replace inflexible regulations with schemes to allow pollution "credits" trading.

GM and the group have already given the EPA a proposal for retiring older, more polluting cars from the nation's highways.

— The Associated Press

Fruehauf opens Canadian deals

DETROIT — Fruehauf Trailer Corp. said it signed 14 dealer locations as part of its program to re-establish a major marketing presence in Canada, said Arthur Rowe, Fruehauf president and chief executive officer.

Fruehauf licensed Trail Mobile Inc. to produce and sell trailers in Canada under its name in 1988.

In 1989 the Gemala Group, an Indonesian-based firm, bought marketing rights to the Fruehauf name in Canada. In 1991 the Gemala Group purchased Trail Mobile U.S.A. It terminated the licensing agreement with Fruehauf and discontinued production of all trailers in Canada, opening the door for Fruehauf to return.

briefly

Illness foils Mazda plan

Toshio Wakiya was all set to take over as president of **Mazda Motor of America** this month when he learned he was seriously ill. Now Wakiya will remain in his former job in Japan, keep the board seat he was just promoted to and receive medical treatment near his home in Hiroshima. Kazuo "Sonny" Sonoguchi, who had been just been promoted from senior vice president to a job in Japan, instead gets promoted to president of Mazda Motor of America. Sonoguchi has been at the California sales arm since 1990.

Wakiya is seriously ill

IRS NAME GAME — If the Black **Ford** and **Lincoln Mercury** Dealers Association changes the word "black" to "minority," it stands a better chance of securing non-profit status from the Internal Revenue Service, says the group's attorney. With non-profit status, the group can recover more than $60,000 in 1989 and 1990 taxes. The change is being considered.

OVERHEARD AT GM — Did you hear about Ross Perot? If he becomes president, there won't be enough money in the Treasury to buy him out.

TOUGH PICKINS — Joseph Gorman, chairman of supplier TRW Inc., says **General Motors** parts king Ignacio Lopez will find it tougher to slash costs here than in Europe: "There was waste in Europe. He could pick a lot of low-hanging fruit that doesn't exist in the United States. We've been through that."

'I'M OUTTA HERE' — Did John Rock think twice about moving from staff vice president to **Oldsmobile** general manager this spring? Rock says he was feeling the frustration of "a field guy . . . shuffling papers." Then Executive Vice President Alan Smith "called me in and looked me in the eye and said, 'Rock: You're going to Oldsmobile.' I said, 'Thank you — I'm outta here." '

DUN'S DELIGHT — Dun & Bradstreet Information Services says that even though they were losing money, the Big 3 assembly plants took only 14 days to pay bills in December 1991, compared with 12 days a year earlier. The analysts credit the Big 3 with maintaining adequate working capital and positive cash flow.

DRIVER TRAINING — GE Capital Fleet Services of Canada and **General Motors** are footing the bill this week to teach 12 of GE's fleet manager customers how to drive better, including ABS and non-ABS braking sessions. The John Powell Performance Driving School is the teacher. Fleet managers will likely share their new expertise with their own drivers, except maybe the part about how to enter Turn 2 on Mosport race track at maximum speed.

GRAVE CONCERN — A family cemetery, enveloped in a clump of trees and surrounded by blackberries, is on the land being sold for the new **BMW** automobile plant in South Carolina. It's not clear what will happen to the cemetery, the 12 unmarked headstones, and the remains buried there. Margaret Barnett, whose ancestors are there, said, "I'd hate to see cement poured over it."

Toyota center to train suppliers

LINDSAY CHAPPELL
Staff Reporter

Japanese automakers, fighting an uphill battle to source more U.S. parts and materials, raised their efforts to another level last week.

Toyota Motor Corp. said it will open a supplier-assistance center this September in Lexington, Ky., where it plans to remake a handful of U.S. suppliers each year. Even non-Toyota suppliers will be taught the vaunted "Toyota production system." The effort, Toyota hopes, will help create a more competitive U.S. supply industry.

The move comes amid enormous political pressure for Japanese automakers to use more U.S. parts. Just last week, the House of Representatives passed a measure that would force Japanese transplants to source 70 percent of their parts and materials from North American suppliers.

The Japanese say they are going as fast as they can without sacrificing quality and compromising standards. In the meantime, efforts to boost spending have been hampered by a decline in Japanese automakers' U.S. vehicle sales and output from their U.S. transplants, which account for most of Japan's U.S. parts buying.

Still, the five largest Japanese automakers increased their U.S. spending by $698 million in the fiscal year ended March 30. During the current fiscal year, the companies say they will spend an additional $2.5 billion among U.S. suppliers.

Japanese industry has targeted U.S. purchases of $19 billion by fiscal year 1994 — a jump of more than $7.5 billion from this year's level.

MORE COMPLEX PARTS

But future spending could be harder to come by. The carmakers are beginning to source more and more critical parts, like engine components. Those components require closer involvement with U.S. companies during the early design stages of a vehicle.

"Initially, the work is somewhat easy because they purchase common parts, like audio speakers and tires," explains Tomoyuki Okusa, a spokesman for Mitsubishi Motors America Inc. "Now it becomes very difficult. Critical components require more early design, more testing and evaluation."

Toyota emphasizes that the Kentucky center will not be used to qualify parts makers for new business. The company says there is no guarantee that a supplier who converts to the Toyota system will ever receive any new business from Toyota.

"We don't need the center to reach our 1994 target of sourcing $5.2 billion from U.S. companies," said Tim Andree, spokesman for the project. "But if you aim those projections farther out into the future, then yes it will help us continue to source more from American suppliers. If it helps create a more competitive and efficient U.S. supplier industry, that has to make it easier for us to do business here."

Toyota's Lexington center will move to Georgetown, Ky., which is home of the firm's Camry plant, in spring 1994.

The operation will guide six to eight U.S. firms a year through a complete make-over, including production techniques and human resources issues. The Toyota production system relies on such lean-production tenets as low parts inventories, constant quality improvement and minimal waste.

COMPLETE MAKE-OVER

"The Japanese don't just want to see the part," says Shahid Kahn, owner of Bumper Works in Danville, Ill., a bumper supplier who underwent a Toyota make-over two years ago in an early test case for the project.

"They want to see how you make the part. If you're not producing it efficiently, with the flexibility to change when necessary, then how competitive can you help them be?"

Kahn was already selling bumpers to Toyota Motor Sales U.S.A. Inc. for installation on imported cars at the port. But the conversion to Toyota's way of running shop helped him become a more attractive supplier, he says.

After the year-long process, the company slashed absenteeism from 16 percent to 2 percent and brought on-the-job accidents down by 70 percent. It cut the average time required to change stamping dies from 90 minutes to 11 minutes. Inventories were reduced by 70 percent and manufacturing defects by 80 percent.

A year ago, Bumper Works landed a new contract to supply California-built Toyota pickups. Kahn says there was no direct connection between the make-over and the contract. But he says he's now in a better position to land future Toyota contracts.

"We're more competitive now," Kahn says. "But that makes us more attractive to other customers, too."

U.S. suppliers brought in early

In the past year, the Japanese have stepped up efforts to involve U.S. firms early in the new-product design process:

- **Honda Motor Co. brought 41 U.S. suppliers in to work on its 1994 Accord project.**
- **Nissan Motor Co. Ltd. took 50 "high-potential" U.S. suppliers to Japan for design-in work.**
- **Toyota Motor Corp. said U.S. design-in efforts helped it add an additional $300 million to its original 1992 spending target for U.S. sourcing.**

Pontiac to add 'value' to excitement ads

Grand Am approach serves as a model

ARLENA SAWYERS
Staff Reporter

Pontiac's excitement image created in the 1980s is evolving to include good basic value in the 1990s, say Pontiac marketing and advertising executives.

Without disclosing Pontiac's 1993 advertising plans, Lynn Myers, Pontiac general marketing manager, said the current crop of Pontiac Bonneville and Grand Am advertising is a good indication of the company's approach to advertising in the 1990s.

"ABS (anti-lock brake system) has been a major portion of our advertising," said Myers, who took over Pontiac's marketing in January. "Comparative advertising tells a strong story relative to other cars. We feel that Pontiac as the excitement division is still valid for the '90s."

Pontiac began its "excitement" theme in 1982 and crafted it with ads dominated by performance shots of the cars, pulsating music and scantily clad women.

Performance and handling still are the focal points in the ads for the redesigned 1992 Bonneville and Grand Am, but product attributes such as active safety and comparisons to the competition are a major portion of the advertising.

But don't expect dull, said Mark Gjovik, executive vice president and group account director at Pontiac's ad agency, DMB&B in Bloomfield Hills, Mich.

"You can have a car that represents improved engineering and good value for the money," he said. "Part of that value is the fact that it's exciting, it performs well, it looks good, you feel good behind the wheel."

The average buyer of the 1992 Pontiac Bonneville SE (rear) is 47 years old; for the predecessor SE, it was 57. The average SSEi buyer is in the mid-40s.

This approach seems to be working. Pontiac sold 74,090 Bonnevilles from Oct. 1, 1991, to June 30, compared with 41,970 units in the same period a year earlier. Grand Am sales in the same period were 149,885 units, compared to 128,208 a year earlier.

Myers also points out that the average age of the Bonneville SE buyer dropped 10 years, from about 57 for the 1991 model to 47 for the redesigned car.

The average age of Bonneville SSE and SSEi buyers remain in the mid 40s.

Pontiac has had good response to one particular Bonneville spot that broke in the spring, Myers said. It features two executives standing near a green Bonneville who are discussing the virtues of various luxury cars.

In the spot, the owner of the car admits that he could have purchased a Lexus or a BMW, but that he got style, performance and value for a lot less. It is not revealed until the end of the spot that the car is a Bonneville.

"We're taking a rational approach," said Michael Wright, Pontiac advertising manager. "We're saying, 'Here's what you get and you get it for less.' "

Dealers help Jaguar claw its way into Power top 10

Getting cozy with customers

JIM HENRY
Staff Reporter

MAHWAH, N.J. — Jaguar Cars Inc. — yes, Jaguar — made a surprising climb among the elite in the latest Customer Satisfaction Index from J.D. Power & Associates.

Jaguar was No. 10 on the list, outscoring Porsche and BMW. That's quite a leap for a marque burdened by a reputation for unreliability. Jaguar was in 25th place last year, and even that was improvement over previous years.

Michael H. Dale, the straight-shooting president of the U.S. subsidiary, once said that the silver lining in making such finicky cats was that Jaguar owners had low expectations. "With a Mercedes owner, their expectations are so high that the slightest problem is a big crisis," he said. "But with a Jaguar, if it started up on a rainy day, it was a 'bloody miracle.' "

What happened? The short answer is: hustling dealers, sharper competition and better product quality under parent company Ford Motor Co.

"The marque is awake again," Dale said.

Sales through June were up 10.8 percent to 4,809. But that's still 49.1 percent below two years ago.

"It's going to take years, not months, to change the perception," Dale said.

He credits others for the turnabout, especially Jaguar's dealers.

He even has good words for Lexus, which raised everyone's quality expectations. "Lexus deserves all their success, they really do. They just work at it *so hard*, such incredible attention to detail," Dale said.

If he takes any credit, it's for Jaguar's decision in 1984 to cut its dealer body by 35 and to encourage the rest to upgrade their dealerships. Jaguar had about 180 dealers when the "dealer rationalization program" began, compared with a high of 250. Today, Jaguar has 136 dealers.

"With the dealers we have today, give them half a chance, a marketing program and a better car, and they'll succeed," Dale said. His advice to other companies with too many dealers? "They should terminate half of them tomorrow, of course," he says, only half-joking.

Jaguar's top 10 finish was largely based on a fourth-place tie with Acura in the customer-handling component of the study. Jaguar's vehicle repair/reliability score showed a 20-point improvement over the previous year, but was still 18th out of 36 — compared with 33rd in 1991.

Dale said Ford, which acquired Jaguar in 1990, has fundamentally improved product quality. He said he can take one look at a car and tell if it's post-Ford.

"I was visiting a dealer the other day, and we were looking at the rear end of two cars side by side," Dale recalled. "I told him, 'You know, I just can't get used to how the chrome lines up straight!' "

He said by Ford's quality measures, the cars coming off the line have one-fifth the problems they had two years ago.

"You've got to remember there are fewer than a dozen Ford guys at the plant," Dale said. "It's management, that's what it is. In other words, the same guys who screwed it up are now the ones who are fixing it."

Strong sales keep inventories low

JOSEPH BOHN
Truck Editor

The upswing in the van conversion market has converters predicting the cleanest buildout in the past several years.

The only question is how smoothly General Motors can get up to speed on full-sized van production in Flint, Mich. The Flint facility is being converted to G-van production. Job 1 for the 1993 model is scheduled Aug. 10, according to converters.

Converters attending a GMC Truck Division bailment pool meeting last month were told that Flint will have a long production acceleration. The plant will not reach full production until Jan. 25, 1993.

"As long as the plant starts up with the schedule they've got, it'll be OK," said Gary Soos, general sales manager for Custom Craft Vehicles in Milwaukee. "If there's any hiccup, there could be a shortage. Clearly, there won't be big numbers on G vans at the start of '93."

Custom Craft and Glaval Inc., located in Elkhart, Ind., both have a comfortable supply of full-sized GM van chassis. But Kevin Slater, vice president of sales for Glaval, said his company has perhaps a month's oversupply of compact Chevrolet Astro and full-sized Ford van chassis.

Glaval bought an unusually heavy supply of both chassis, anticipating stronger summer sales. Wholesale demand during March and April was so strong that converters had trouble keeping up with orders.

As dealers filled their inventories — and wholesale demand caught up to retail sales — conversion activity slowed. Now, with the strong upturn in the truck market, retail conversion sales again are rebounding.

Glaval has consistently been short of Dodge van chassis and is seeking a doubling of its current allotment. Slater said he would like to get 500 to 600 Dodge van chassis a month.

Dodge has been very aggressive in the marketplace with consumer and dealer incentives, and it probably hasn't been taken as seriously as it should have by Ford and General Motors, Slater said.

Glaval has signed up 75 of Dodge's top 100 dealers and plans to sign all 100, Slater said.

Glaval, now Dodge's No. 2 converter, wants to overtake Mark III Industries Inc. of Ocala, Fla., as the top Dodge converter. The company wants to ensure a steady high volume of business, even if the overall conversion market softens. Glaval is currently producing 75 conversion vans of all makes daily, Slater said.

Custom Craft, a high-line van converter, is currently producing nine units daily, Soos said. That is up from the previous six units earlier this year. Custom Craft has been operating on steady overtime for the past four months, Soos said.

"Retail traffic's coming back now," Slater said. "That depletes dealers' inventory on '92s."

Chupp & Sons Conversions in Elkhart, Ind., also sees an upturn. "We've seen a turnaround in the last two to three weeks," said Jim Funkhouser, director of international sales and marketing.

Funkhouser attended one of Ford's regional dealer shows in Pittsburgh last week where Ford has been training and encouraging dealers to become more involved in conversion sales. The Pittsburgh show drew about 75 Ford dealers, Funkhouser said.

Chupp & Sons is producing between 10 and 13 conversion vans per day, he said, a number that has been fairly consistent.

Generally speaking, the truck market has been one of the industry's few bright spots. With the prime rate dropping and more favorable interest rates, converters are enthused about the outlook for summer and fall. ■

Ford to elminate non-pool van converters

JOSEPH BOHN
Truck Editor

Ford Division is tightening restrictions on non-consignment pool van converters for the 1993 model year and will eliminate all non-pool business by 1994.

Jerome Mittman, in a letter to dealers and converters, said non-pool converters working on 1993-model Econoline E-150, E-250 or Aerostar vans will be subject to engineering reviews, customer quality surveys and all other pool company requirements, except the financial ones of Ford Motor Credit Co. and the minimum volume requirements imposed by Ford Division.

Pool companies are required to convert at least 150 Ford vans a year. A non-pool company is only required to convert about 50 Ford vans.

If a firm hasn't done that many, it may still qualify for raw factory chassis by showing its capability to do so. If, for example, a non-pool firm converted only 25 Ford vans last year, but converted 100 of all different makes, it could still qualify, Mittman said.

Most importantly, every van conversion, whether done by a pool or non-pool company, must be retailed by a Ford Division dealer.

That is to prevent units from going to used-car, RV, General Motors or other non-Ford lots.

The new restrictions are preparatory to Ford eliminating non-pool converters.

"In 1994, to continue to receive an E-150 or Aerostar with the prep package, you have to be a pool account. Converters have one more year to qualify for converter status," Mittman said.

Ford now has 77 converters in its consignment pool and expects to have about 90 when the program is fully implemented.

DODGE IS HAPPY

Dodge Division has no plans to change its current rules for non-pool companies, said Jim Lynch, Dodge manager of special vehicle sales.

The estimated 30 non-pool companies converting full-sized Dodge van chassis are free to convert vans for Dodge dealers on a drop-ship basis.

"We have provided converters with our 20-step van conversion quality improvement program several years ago. We've had people calling on them since and are comfortable with the quality of their conversions in most cases," Lynch said.

Dodge currently has about 70 pool van converters, who together handle about 80 percent of its conversions, Lynch said.

He said the company's van conversion sales are running at their strongest level in two years for retail and wholesale.

He estimated 1992 model retail sales of Dodge van conversions would total 28,000 to 32,000, up 25 percent from last year.

The new 1994 model van, due in January 1993 after a short run of 1993 models, is expected to boost next year's sales by at least another 10 percent.

Dodge's van conversion sales are also being helped by the growing number of dealers, even smaller ones, who are stocking and selling conversion vans, Lynch added.

For the 1993 model year the converter package for full-sized chassis, called Customer Preferred Order Specs, will continue to have the same equipment and similar discounts as before.

Lynch said the company hasn't decided whether to offer a similar package for Caravan C/V minivans.

Chrysler's incentives, which have also been a big part of its success, continue, though in slightly reduced amounts.

From July 1 through Sept. 30, Chrysler reduced its previous $2,000-per unit maximum dealer cash incentive on conversion sales to $1,500, said Jim Zalansky, sales manager for Louis Dodge in Avondale, Ariz.

Under the program, dealers get $500 per unit for the first two sales, $1,000 per unit for the next two and $1,500 per unit starting with the fifth sale.

Credits for sales start over each month.

Louis Dodge is one of the smaller dealerships that has become more involved in conversions. Zalansky said his dealership normally sells one or two a month, but sold five in June. ■

Has Your Van Conversion Supplier Passed The Barrier Test?

Glaval Has!

There is only one way to prove total compliance with the new Federal safety regulations for conversion vans: A barrier crash test. Glaval has passed with flying colors and has the certification to prove it. Exercise "due care." Contact one of the only van converters in the nation that has proven its commitment to dealer support and consumer safety.

RECREATIONAL VEHICLES

Ford adds five converters

DETROIT — Ford Division has admitted five new converters to its consignment pool, said Jerome Mittman, RV sales manager.

They are Holiday Vans in Ypsilanti, Mich.; Showcase Travel in Arlington, Texas; Trans Aire and Unique Motor Coach, both in Elkhart, Ind., and Van Versions in Adel, Ga.

Ford has 77 converters in its pool account.

Computer Design fields new chassis

PAXTON, Ill. — Computer Design Chassis has a new premium RV chassis based on its commercial and ambulance chassis.

The new diesel-powered chassis features a 13,200-pound gross vehicle weight and wheelbase lengths of 145 to 176 inches.

It has a front-engine design, unusual for diesel models. It uses Cummins Engine Co.'s 5.9-liter turbodiesel and Chrysler's four-speed automatic overdrive transmission for its powertrain, according to a company spokesman.

New RV shows air in July

RESTON, Va. — Thirteen new episodes of the RV travel series, "Going Our Way," began airing July 4 on The Nashville Network.

The 30-minute program visits interesting destinations while offering useful RV travel information and advice.

The show airs on Saturdays and Thursdays and has averaged over 500,000 viewers weekly the past two years, according to the Recreation Vehicle Industry Association.

Converter ranks still thinning

DETROIT — The van conversion industry is still receding as it moves toward a manageable size.

From literally hundreds of converters a few years ago, there are now fewer than 150.

Chevrolet has 128 converters in its consignment pool, according to Tom Pfingst, assistant director of fleet and RV sales.

Ford expects to end up with 90 to 100 by the 1994 model year when its stops doing business with non-pool converters, according to Jerome Mittman, RV sales manager. Dodge anticipates having about 80 to 90, according to Jim Lynch, special vehicle sales manager.

Converters have faced increasing pressure from governmental safety standards, manufacturers' quality requirements and the capital investments required to remain competitive.

Chevrolet has lost 14 converters since January. Tern Industries Inc. in Syracuse, Ind., is one of its most recent casualties, Pfingst said. ■

Canada creeps up on Japan as U.S. auto import leader

LINDSAY CHAPPELL
Staff Reporter

A surge in truck imports from Canada early this year created an automotive trade deficit with that country that was in the same multi-billion-dollar league as the U.S. deficit with Japan.

The value of U.S. vehicle imports from Canada rose 32.9 percent in the first quarter of this year, and U.S. exports to Canada fell 24.8 percent.

The U.S. vehicle deficit with Canada was $3.6 billion. The deficit with Japan was $5.6 billion.

The surge in imports from Canada was due primarily to large increases in truck production at the Big 3's Canadian plants from January through March. The Big 3 built nearly 95,000 more light trucks there than they did during the same period last year. Canadian car production during the period fell by about 13,000 units.

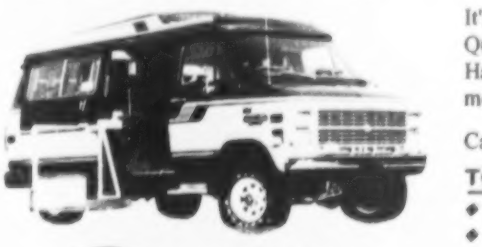
The $3.6 billion quarterly trade deficit with Canada compared with a $1.8 billion deficit in the year-ago period. The $5.6 billion deficit with Japan compared with $5.9 billion a year earlier.

The widened Canadian trade gap is not likely to create the commotion caused by the U.S.-Japan imbalance. U.S.-Canadian automotive trade traditionally has been relatively balanced, with the United States maintaining a surplus in auto parts exports to Canada. Moreover, most of the vehicles imported from Canada are made in Big 3 factories, and the two countries have a free-trade pact.

The United States' net deficit with Japan is substantially larger than that with Canada because the United States exports relatively few vehicles to Japan every year but sends more than 1 million into Canada.

But the situation does challenge U.S. trade critics who single out Japan for its export volume. Japan has been the leading vehicle exporter to the United States since the late 1970s, but for the first quarter, Canada was just $600 million behind.

Japan exported $5.7 billion in cars and trucks to the United States, a decline of 5.4 percent, while Canada shipped $5.1 billion in vehicles. AN



New TOUCH DRIVE Makes 4x4 from Quigley the Easier Choice

We put 4x4 power within easy reach with new electronic Touch Drive control. Available only from Quigley, Touch Drive is fully automatic. A single touch switches your vehicle from rear drive to 4x4 or 4x4 low range. Dash indicator lights tell you what mode is engaged at all times.

It's so simple, so quick, it's no wonder it's from Quigley, pioneer in Quadra-Version and Right-Hand-Drive conversion for vans and trucks for more than a quarter century.

Call on Quigley if you want the best.

TOUCH DRIVE
- *Now available on most major U.S. vans*
- *Foolproof fingertip control delivers 4x4 from full stop up to speeds of 55 mph*
- *Indicator lights show when vehicle is in 4x4 or 4x4 low range*
- *Warranty protection without affecting factory warranty on unaltered portions of vehicle*
- **Ship through available to authorized dealers**

Britain supports recycling plan

LONDON — The British government's Department of Trade and Industry plans to provide $524,000 to support an automotive plastics recycling project.

The grant, to a consortium including ICI Chemicals and Polymers Ltd., Enimont S.p.A., ICI Europe Ltd. and Fiat Auto S.p.A., will assist work on recycling waste plastics from car manufacture and and on redesign of components for easier recycling.

The project has various phases: study of feasibility of reusing plastics from existing production and, and pilot projects leading toward full industrial application.

SALES

Big 3 reclaim share from Japan

continued from PAGE 1

way through 1991, Ford trailed by 22,204.

Ford's redesigned Taurus, red-hot Explorer and upgraded entry-level Escort with a national one-price program have Chevrolet gasping.

"It's Ford's encompassing devotion to the Escort that has been its success," said Jim Wangers, owner of Automotive Marketing Consultants Inc. in Warren, Mich.

"Ever since Chevy killed the Chevette and stepped away from the true low-end market, Chevy has compromised the whole name of what Chevy means."

Every Ford car line but Probe and Festiva was up in sales through the first half of the year.

Chevrolet's car results were dismal. Through June 30, the Lumina was the only high-volume car even close to breaking even with last year, down 1.6 percent.

Chevrolet trucks fared better. The redesigned Blazer and Suburban did well, while the older S-10 Blazer, S-10 pickup, C/K pickup and Astro had healthy increases.

The only problem for Chevrolet trucks was that Ford's increases — led by F-series, Ranger and Explorer — were bigger.

Through June 30, Ford outsold Chevrolet by 131,988 trucks, more than double its 51,865-unit lead from last year.

In cars, Chevrolet had sold 615,405 units in the first half of 1991, compared with 541,336 for Ford. This year, the number have almost reversed: 601,328 for Ford vs. 547,526 for Chevrolet.

"Our dealers are on a roll," said Ross Roberts, Ford Division general manager.

RENTALS BOOST JUNE

Despite a 10.2 percent increase in June sales, analysts cautioned that sales to daily rental fleets played a big role. Fleets stocked up for a summer travel boom spurred by airline price wars.

Those June fleet sales might depress car sales somewhat in late July and early August, but the fall-off won't be drastic, said Joel Pitcoff, Ford Motor Co.'s research and analysis manager.

"In the truck market, on the other hand, there aren't any daily rentals in there, and we haven't seen a seasonal rate for trucks like that since July 1990," he said.

The seasonal rate for light trucks was 5.0 million, according to *Automotive News*. The Big 3 posted solid market share gains at the expense of the Japanese.

The Big 3 had 87.4 percent of the light-truck market in June, 3.7 points higher than in the year-ago month. After six months, Big 3 truck share was up 3.2 points to 86.3 percent. Its car share was about the same. Overall, Big 3 car and truck sales rose 7.5 percent.

Light trucks accounted for 35.2 percent of the light-vehicle market year-to-date, up from 33.0 percent.

CHRYSLER

Chrysler Corp.'s new LH sedans due this fall won't arrive any too soon. The automaker's passenger car sales were down 9.4 percent for the six months. The only real success stories were the low-margin Sundance/Shadow duo and the-Mexican-built Chrysler LeBaron four-door sedan.

But Chrysler's truck sales — spurred by minivan incentives and strong sales of the new Grand

Continued on next page

Continued from previous page

Cherokee and existing Cherokee — tracked well ahead of year-ago levels. Chrysler sold 246,838 minivans through June, up 24 percent.

Overall Chrysler sales rose 10.9 percent from 1991 levels.

FORD

Ford Division's gains helped offset sluggish Lincoln sales as Ford Motor Co. reported a 10.9 percent sales increase for the half-year.

The national one-price Escort program and regional programs, offering loaded Tempos and Thunderbirds at cut-rate prices, kept sales of those models brisk. The Crown Victoria got a boost from recently introduced police vehicles. The F-series truck continues as the best-selling vehicle in the United States.

Results were mixed at Mercury, with the Topaz and Sable up and the Cougar and Grand Marquis down. All three Lincolns lost sales.

GENERAL MOTORS

For the first six months of the year, GM sold nearly 2.29 million vehicles, up 4.2 percent. Though trucks were up 7.7 percent and cars gained 2.5 percent, overall marked share dropped 0.3 points to 35.2 percent.

Still, GM had much to cheer about. GMC Truck, Pontiac, Cadillac, Oldsmobile and Saturn all had healthy sales gains in the first half. They more than offset declines at Chevrolet and Buick.

Saturn reached the 20,000 sales mark for the first time in its history in June. For the six months, Saturn sold 95,410 cars, 70,000 more than in the year-ago period.

EUROPEANS

Mercedes-Benz and BMW have rebounded from a terrible first half last year, armed with new products and money for special lease deals.

But overall, European imports were down 0.2 percent.

BMW, which added its new, entry-level 3 series after the first half of 1991, saw its sales jump 30.8 percent through June. Mercedes-Benz introduced its new, high-end S class last fall and cut-rate leases this spring. Its sales climbed 23.1 percent in the first half.

But car sales for the European volume leader, Volkswagen United States Inc., slipped 18.4 percent for six months. Yugo, Sterling and Peugeot all dropped out of the U.S. market since last June 30.

ASIANS

Only four Asian makes — Lexus, Infiniti, Suzuki and Daihatsu — outperformed the U.S. market's 5.1 percent gain through June.

Lexus and Infiniti climbed on the strength of new products, and Suzuki was helped by its Sidekick. For Daihatsu, the gain is bittersweet. It announced in February that it is quitting the U.S. market this year.

As a group, Japanese sales were down 1.0 percent, and their market share dropped to 23.8 percent. The other Asian player, Korean importer Hyundai, held its sales slide to 3.6 percent.

Competition between the two Japanese leaders, Toyota Motor Sales U.S.A. Inc. and American Honda Motor Co., continues to heat up. Toyota's Lexus Division is rapidly gaining ground on Honda's Acura Division. Acura leads Lexus by just 20,524 units this year, down from 43,269 halfway through 1991.

The Toyota Camry also is gunning at the Accord. Last year's lead of 88,078 has been cut to 53,776 units. The Accord is also just hanging onto its spot as industry sales leader, a mere 10,493 units ahead of the Ford Taurus.

The jury is still out on whether the "new Mazda" will be a bigger Mazda. While the company was down 2.8 percent for the first six months, much of its new product is just getting to dealerships.

Staff Reporter Kristine Stiven Breese in Los Angeles contributed to this report.

TOYODA

Tatsuro to succeed Shoichiro at Toyota

continued from PAGE 3

helm. But the company seems caught in both a family and a generational squeeze, with no clear succession in sight.

OTHER CANDIDATES

After Tatsuro, the next likely candidates include Hiroshi Okuda and Iwao Isomura, both 60 years old.

But both are senior managing directors and would need to be named vice presidents before any further promotion.

The next generation in the Toyoda family includes one son of Shoichiro and three sons of Eiji.

Eiji's eldest son, 50-year-old Kanshiro Toyoda, is vice president of Aishin Seiki, a parts maker in the Toyota group. He is far too young to have a shot at the presidency in this round.

Despite the shortage of other qualified managers, Tatsuro has not been the most popular candidate for the job.

Among company and industry executives here, he has a "softer" image than his brother and uncle, and has not been as close to the business.

Indeed, Eiji and Shoichiro have run Toyota as a close-knit, two-man team for much of last decade, giving rise to the widespread perception that the company had become increasingly insular and provincial in its decision making.

But Nobuyoshi Yoshida, president of the Automotive Business Practice Institute, a private research company, lauded the younger Toyoda's qualifications for the job.

"He is a very serious and gentle man," Yoshida said. "He has a good command of English and is a very internationalized person."

Although he earned a degree in mechanical engineering from the University of Tokyo, Tatsuro — unlike most Toyota presidents — has not worked in the company's engineering sectors. Most of his career has been in marketing and product planning.

Since becoming executive vice president in 1988, he has worked closely on international projects and has overseen production and logistics, quality control activities and public affairs.

Toyoda began studying English as a junior high school student in the middle of World War II — an indication of a rather liberal education. After the war, he took English lessons at home from an American teacher.

He continued his English studies in college and added French and German before putting his language skills to practice overseas. In addition to his extensive American experience, he has been closely associated with Toyota's expansion in the United Kingdom.

In recent years, he has assumed a more public profile in the Japanese business community, serving as vice chairman of the Japan Automobile Manufacturers Association and vice president of Doyukai, the Japan Association of Corporate Executives. AN

Staff Reporter Lindsay Chappell contributed to this report.

The Prince and the Toyoda girl

According to observers in Japan, one wild-card factor could keep Tatsuro Toyoda out of the presidency: His 28-year-old California-educated daughter, Yukiko, is considered to be a prime candidate in the Imperial Palace's search for a bride for the crown prince, the eldest son of Emperor Akihito.

If Toyoda's daughter agreed to accept the prince's hand, these observers say, he could be obliged to forego the presidency of Toyota. This is because it would be considered highly unseemly for the head of Japan's most powerful corporation to be linked to the emperor through marriage. It is not known if Toyoda, a widely travelled, internationally-oriented executive, subscribes to this thinking.

The emperor's staff has imposed a news blackout on the search for a crown princess until mid-August.

Mazda, Isuzu, Mitsubishi offer new incentive plans

ARLENA SAWYERS
Staff Reporter

Consumer and dealer rebates and free roadside assistance are among the incentive programs announced last week.

Mazda Motor of America Inc. announced a new round of consumer rebates that are in effect through Sept. 8. They are $1,200 to $1,400 on selected 1992 cars and $1,000 on the MPV. Rebates on the 1992 Navajo are $750 to $1,000 depending on model and region; 1992 truck rebates are $750 to $1,500 depending on model and region.

Through Sept. 30, **American Isuzu Motors Inc.** offers dealer incentives that vary by region. The Pickup and Rodeo programs allow dealers to choose a fixed per-vehicle amount or a program based on the number of vehicles.

Depending on region and option, 1991 and 1992 Pickup incentives range from $800 to $1,600; 1991 and 1992 Rodeo, $400 to $1,400; 1991 and 1992 cars, $500 to $2,500.

Mitsubishi Motor Sales of America's factory-to-dealer incentive program has been extended through July 31. Incentives range from $500 to $3,000 on selected 1991 and 1992 cars and $1,000 to $1,500 on 1991 and 1992 pickups. Some payments are based on the number of vehicles sold and others are based on factory-set quotas.

Also extended were the two separate incentive programs on 1991 and 1992 Eclipse. One earns dealers seven percent of the sticker price beginning with the second sale, while the other is a special consumer lease plan of $500 down and $149 a month for 60 months on the base Eclipse.

Lincoln-Mercury canceled its owner loyalty program on the 1992 Lincoln and increased national consumer rebates on the cars.

Through Sept. 23, Continental and Town Car incentives are $2,000, up from $1,250; the Mark VII's is $3,000, up from $2,000.

Ford Motor Credit Co. is providing free Ford Auto Club roadside service assistance with every leased car and light-truck.

The benefits include emergency travel expense reimbursement of up to $500 for Ford and Mercury lessees and up to $1,000 for Lincoln lessees. AN

INCENTIVE WATCH— DEALER INCENTIVES

NEW PROGRAM

ISUZU (expires Sept. 30)

Impluse (1991)	$2,500
Impulse (1992)	$1,500
Stylus (1991 Calif.)	$800-2,000
Stylus (1991)	$800-1,100
Stylus (1992)	$500
*Pickup (1991-'92)	$800-1,600
*Rodeo (1991-'92)	$400-1,400

*Dealer can choose flat payment or one based on number sold.
Dealer has the option to sharing rebate with buyer.

CONTINUING PROGRAMS

AUDI (1991 models, no expiration date)

Audi 100 and 200	$1,500
Audi 90	$1,000

Rebates apply to models purchased by dealer from Audi of America port stocks.

BMW (no expiration date)

750iL (1991)	$10,000

CHEVROLET (1992 models, expires Sept. 23)

Corvette ZR-1 (1992)	$2,000
Other Corvette (1992)	$1,000

LOTUS (1991, no expiration date)

Elan	$5,000
Esprit Turbo	$11,000-15,000

MITSUBISHI (1991-92 models, expires July 31)

Mirage	$500-1,000, quota
Galant	$1,000-1,500, quota
Galant VR-4	$500-3,000, based on number sold
(Galant VR-4 payments are in addition to other Galant rebates.)	
Eclipse	7% of sticker, starts with second sale
Pickup	$1,000-1,500, quota

PEUGEOT (no expiration date)

405	$5,000
505	$6,000

PORSCHE (1991 models, no expiration date. To qualify for the following rebates, dealers had to buy two cars from port stock by Jan. 17.)

911 Carrera 2, 928	$9,500
911 Carrera 4	$13,500
911 Turbo	$14,000

SUBARU (1992 models, expires Aug. 3)

Loyale	$500
Legacy (invoiced before Feb. 4)	$1,000
Legacy (invoiced after Feb. 4)	$1,500

SUZUKI (expires Aug. 3)

Swift (1992)	$400-700
Sidekick (1992)	$700-1,500
Swift (1991)	$700-1,000
Sidekick (1991)	$500-1,000

VOLKSWAGEN (no expiration date)

Passat (1991)	$1,500
Jetta, Fox, Golf (1991)	$500
All 1990 cars	$500-1,500

TOYOTA (expires Aug. 3)

Tercel (1991-92)	0-$300, quota
Corolla (1992)	$700-$1,500, quota
Pickups	$200-1,400, quota

INCENTIVE WATCH — CUSTOMER INCENTIVES

NEW PROGRAMS

CHRYSLER CORP.

(Expires Aug. 31; 1991-92 models unless otherwise indicated; in lieu of rebates, finance rates of 4.9 to 9.9 percent are offered.)

Loyale (fwd sedans)	$500
Loyale (awd wagons)	$500

TRADE

House vote backs protectionists

continued from PAGE 3

when they're worse. The American people want us to fix what is broken," Levin said.

Not all of the Big 3 agree — at least on this measure.

The bill sends a message that Congress won't accept "empty promises" from the Japanese, said Chrysler Corp.

Ford Motor Co. said the bill "will work to improve the U.S. trade deficit" with Japan, now about $43 billion a year, three-quarters of it in automobiles and auto parts.

But General Motors repeated its opposition to import restrictions, which it says can have "unintended consequences."

The bill is opposed by the American International Automobile Dealers Association, the National Automobile Dealers Association and the Association of International Automobile Manufacturers.

Action now shifts to the Senate. Finance Committee Chairman Lloyd Bentsen, D-Texas, has scheduled hearings on the Senate version of the trade bill for late July and early August.

And the House is expected to vote later this month on a tariff bill that includes a provision to reclassify imported minivans and four-door sport-utilities as trucks. That would subject those vehicles to a 25 percent import tariff, instead of the current 2.5 percent.

The Big 3 have lobbied hard for the tariff reclassification.

During the House trade debate, Rep. Philip Crane, R-Ill., called the bill another Detroit-sponsored round of protectionism. AN

Warren picked to make new Dodge pickup

GWENDOLYN ZONGHETTI
Special Correspondent

Chrysler Corp. will begin production of its redesigned full-sized pickup next summer at the Dodge City plant in Warren, Mich.

To make room for the new truck, code-named T-300, the automaker will transfer part of the production of the Dakota pickup from the Warren Truck Assembly plant to its Toledo, Ohio, facility. Chrysler will use its Toledo Parkway and Stickney plants at the facility for Dakota production.

Dakota production will be moved to Toledo in mid-1993; the specific date has not been determined. The automaker will spend over $100 million to prepare the Ohio complex.

"We are not sure what percentage of production will be moved to Toledo. That will depend on the demand for each different model," said Chris Hosford, Chrysler spokesman.

Chrysler expects the T-300, which will replace the Dodge Ram pickup, to have a big impact on the full-sized truck market. (A photo of the truck is on Page 2.)

The addition of Dakota production was good news for the quivering Jeep plant, which ended Comanche pickup production on May 18. Chrysler said no jobs will be lost at either the Warren or Toledo locations.

Dakota production in Toledo will begin in fall 1993. The facility also assembles the Jeep Cherokee and will start building the 1993 Wrangler on July 22.

U.S. AND CANADA CAR AND TRUCK PRODUCTION

Vehicles are assembled in the United States unless noted. Vehicles are cars unless noted.

Six-month truck output soars 30%

GWENDOLYN ZONGHETTI
Special Correspondent

First-half vehicle output in the United States and Canada totaled 6,205,008 units, topping 1991 by 14.6 percent. Cars rose 4.7 percent and trucks jumped 30.4 percent.

Second quarter U.S. and Canada car and truck production was 3,393,347 units, up 13.4 percent from 1991 and up 20.7 percent from the first quarter in 1992.

U.S. truck output in the second quarter was 1,233,960 units — the highest second-quarter production figure on record. Canada truck output was 251,827, the highest volume since 1989 when 262,180 trucks were produced.

In June, U.S. and Canadian car and truck production was 1,214,698, up 21.5 percent from June 1991 and the highest since June 1988 when 1,304,288 vehicles were assembled. Canadian car production in June was 144,344 units, the highest since 1978 when 117,848 cars were made.

U.S. truck production was 460,965, the highest for any June on record and the highest monthly output for 1992.

Car production in the United States totaled 87,232 units last week, up 52.9 percent over the prior week and an increase of 2.1 percent over the year-ago week.

So far this year, makers produced 3,064,484 cars in the United States, up 5.6 percent over the year ago period. In Canada last week, 18,796 cars were assembled, down 3.4 percent from the prior week but up 19.2 percent over the year-ago week.

Year-to-date Canadian car production is 574,639, down 3.3 percent from the 1991 period.

Truckmakers in the United States produced 49,238 vehicles last week, 24.5 percent above the prior week and 21.7 percent above the same period last year.

Year-to-date truck production in the United States is 2,095,692, up 20.4 percent from the same period in 1991.

Truck production in Canada was 8,936 last week, a decline of 41.8 percent from the prior week and down 37.6 percent from the year-ago week.

The week's scheduled car production is shared as follows: GM, 41.1 percent; Ford, 28.1 percent; Chrysler, 12.3 percent; Honda, 4.9 percent; New United Motor Manufacturing Inc., 2.7 percent; Nissan Motor Manufacturing Corp. U.S.A., 2.6 percent; Toyota Motor Manufacturing U.S.A. Inc., 2.5 percent; Diamond-Star Motors Corp., 1.5 percent; Subaru-Isuzu Automotive Inc., 1.3 percent; other manufacturers, 1.2 percent; Mazda Motor Manufacturing Corp. U.S.A., 0.9 percent; Navistar International Corp., 0.7 percent; and AM General, 0.2 percent.

GM scheduled Saturday overtime at the Arlington, Texas, and Van Nuys, Calif., car plants. The Janesville, Wis., and Moraine, Ohio, truck plants worked Friday overtime, and the Janesville plant worked an additional shift on Saturday.

BMW shifts Flesher to S.C.

NEW YORK — BMW AG plans to announce today that Carl W. Flesher Jr., the marketing boss at BMW of North America Inc., will become vice president of public relations for the automaker's South Carolina assembly plant.

He will join construction and manufacturing engineers from the parent company as the first managers at the plant, which is scheduled to open in 1995.

For the last five years, Flesher has been vice president of marketing for the U.S. subsidiary. He has been with BMW for 17 years. The U.S. marketing group will now report to Victor Doolan, vice president of sales and marketing.

Flesher will report for now to Helmut Panke, director of corporate planning at BMW AG in Munich. He will be a member of the permanent plant organization once the rest of the team is in place.

'93 price hike looks like 3%

Ford takes lead on moderate rise

JOHN K. TEAHEN JR.
Senior Editor

1993 PRICES

Ford Motor Co. last week presented a preview of the auto industry's price increases on 1993 cars and light trucks.

If Ford has guessed right, 1993 cars will be about 3 percent higher than the final 1992 stickers after adjusting for year-to-year equipment changes.

Automotive News estimates that a 3 percent increase for the Big 3 would be about $525. The Big 3's introductory boost on 1992 models also was about 3 percent.

Chrysler Corp. lifted the curtain on the prices of its new LH midsized sedans last week, and Saturn checked in with a new coupe and two new wagons and hikes of $800 to $900 on its carryover sedans and coupe. Most of the boost resulted from making a driver-side airbag standard for 1993. It was $625 extra on 1992 Saturns.

CHECKING THE '93 STICKERS
LH prices mirror Taurus ➤ 3
Ford hikes car prices 2.9% ➤ 3
Saturn set prices ➤ 25

Aside from Saturn and the LH cars, General Motors and Chrysler Corp. have not priced any 1993 models. Ditto for the imports, except for 1993-designated cars that were introduced during the 1992 season.

Ford said its pre-introduction hike averaged 2.9 percent on the Ford Mustang, Tempo, Taurus and Crown Victoria; the Mercury Capri, Topaz, Sable and Grand Marquis; and the Lincoln Town Car and Continental.

The Ford Festiva, Escort and Probe and the Mercury Tracer and Villager were priced earlier; the Ford Thunderbird, Mercury Cougar and Lincoln Mark VIII will be priced later.

Ford didn't supply a list of equipment made standard for 1993, but it appears to average about $175 per car. *Automotive News* estimates Ford's increase at $505 on comparably equipped cars. On a straight sticker-to-sticker

Minivans rolling, but limit is in view

DAVID VERSICAL
National Editor

In less than a decade, Americans have gone from taking their first taste of minivans to gobbling up 1 million a year. Now, finally, the limits of the feast are in sight.

Analysts say that the U.S. minivan market will peak between 1.2 million and 1.5 million units around mid-decade. This year, they project, sales will top 1 million for the first time.

The segment's leader, Chrysler Corp., is marketing minivans aggressively, and new players have entered the market for the first time in three years: the Mercury Villager and the Nissan Quest. The Nissan-developed/Ford-built twins will add about 125,000 U.S. sales annually.

A few new players — most notably Honda — are expected to join the fray in the next few years, and minivan offshoots will be explored. But the fact that minivans appeal mainly to one group — married with children — will keep the market potential in check.

"We see it starting to tail off," says Dick Winter, general product manager for minivans at Chrysler, which invented the modern minivan in 1983. "Obviously, it won't grow forever." Chrysler's forecast: 1.4 million to 1.5 million sales by 1995.

But even a rise before the plateau would counter some conventional wisdom, which says that people will drop minivans as quickly as they embraced them.

"The standard research was that vans would take a beating," says George Magliano, director of automotive research at the WEFA

New GM central staff audits dealers on spiffs

PHIL FRAME
Staff Reporter

General Motors this month created a dealer audit section as part of its central office staff to improve consistency in financial reviews, especially for dealers who represent more than one division.

Director of the new dealer audit section is Lee Boettcher, who had headed operations analysis at Chevrolet. Boettcher reports to Eugene Flegm, head of the GM audit staff.

The new teams of auditors have been working already, and some dealers say they have been subject to chargebacks of tens of thousands of dollars for past incentive payments. Those dealers did not want to speak on the record or reveal specifics of their audits.

The audited dealers said the review teams seem to have focused on tiered dealer incentive programs keyed to achievement of sales goals, but all transactions with GM are being verified.

GM confirmed that it created the Corporate Audit Staff and its dealer audit section on July 1 as part of a continuing company restructuring and consolidation.

In creating the section, GM removed the dealer auditing function from the car divisions and consolidated it in the corporation, a spokeswoman said.

Boettcher: heads audit section

"The purpose is not only to reduce our cost of administering audits, but also to increase the efficiency and consistency of the audits," said spokeswoman Toni Simonetti.

She said GM informed dealers of the change in late June, but several GM dealers contacted last week were unaware of the move.

However, dealers generally welcomed the idea of an audit staff charged with consistently enforcing rules of incentive programs.

"If we can bring some ethics back into the business, that would be a good place to start, with some audit procedure that puts dealers on the same footing," said Frank Anderson Jr., president of Sir

New Toyota Supra

This prototype of the 1994 Toyota Supra was caught prowling the California highways. Due to go on sale next spring, the rear-wheel-drive coupe is expected to move upmarket in price to match the Mazda RX-7. Engine offerings are likely to include a twin-turbo 3.8-liter inline six and a 4.0-liter, 40-valve V-8.

Trucks pick up more share in first half

JOSEPH BOHN
Staff Reporter

The light-truck share of overall U.S. vehicle sales increased 2.2 percentage points to 35.2 percent during the first half of calendar 1992 as the crossover of car buyers continues.

Among cars, the subcompact and standard-sized segments increased their market shares to 16.9 percent and 5.2 percent, respectively. Market shares for five of the seven car categories in the *Automotive News* segmentation were down for the period.

Subcompacts benefitted from the introduction of the new Honda Civic and the rising popularity of Saturn.

Both subcompact and standard-sized car segments benefitted from the heavier percentage of retail as opposed to fleet sales this year, said Joel Pitcoff, Ford Motor Co. manager of research and analysis.

workers in a work agreement with suppliers using empty GM factories, either in the United States or Europe.

It was reported last week that J. Ignacio Lopez de Arriortua, GM's vice president for worldwide purchasing, told suppliers in Europe that space inside empty U.S. factories would be available for global suppliers to lease.

According to reports, his plan also advocated the use of laid-off UAW workers at no cost to suppliers. The workers are already receiving full pay under the GM/UAW contract through September 1993.

GM spokeswoman Toni Simonetti said GM is looking at "any and all creative or innovative approaches to fully utilize our people and our facilities," but would not confirm or deny any plan.

FBI links Texan to Ford thefts

ODESSA, Texas — The FBI named the owner of an Odessa body shop as a co-conspirator in a scheme involving more than $1.4 million worth of automobile parts stolen from the Ford Assembly Plant in Lorain, Ohio.

An affidavit filed July 15 in federal court identified Lupe Munguia, owner of Lupe's Body Shop, as being involved in the scheme. The body shop was raided June 26 by FBI agents who seized about $140,000 in cash, transmissions and "other items related to the investigation," according to the affidavit.

'20-20' attacks auto rollovers

NEW YORK — A report on ABC's *20-20* program says 10,000 persons are killed annually in vehicle rollover accidents and that stronger roofs could save thousands of of lives.

The report, which was scheduled to be aired July 17, said the American and Japanese auto industries, as well as the National Highway Traffic Safety Administration, have done little to correct the problem. By some estimates, it said, reinforcing a vehicle frame and roof would cost about $50 per vehicle.

Automakers declined to comment on-camera, but said in written responses that their cars were safe.

— The Associated Press

GM revamps dealer activities

DETROIT — Michael Losh, General Motors vice president and group executive in charge of North American Operations, announced last week that dealer-related activities would be consolidated under the NAO umbrella.

Effective Aug. 1, William Powell will assume the expanded duties of general manager of Motors Holding, Minority Dealer and Dealer Network Development.

Powell's duties expanded

Powell, who had been general manager of GM's Motors Holding Division, will report to Losh. Joseph Vasquez, general director of the GM Minority Dealer Development Department, will report to Powell.

Powell is to coordinate with NAO vehicle divisions and be responsible for strengthening the dealer network.

— Jack Keebler

Ontario peeved by U.S. probe

TORONTO — Ford Motor Co. and Toyota Motor Corp. are downplaying a U.S. Customs investigation of local content at two more Ontario auto plants, but many Canadians are furious.

The furor was sparked by reports that Customs had asked the automakers how North American content is calculated at Toyota's Corolla plant in Cambridge and Ford's Crown Victoria/Grand Marquis plant, located in St. Thomas.

Ontario Premier Bob Rae called the move "cheap trade harassment" and demanded that Canada withdraw from free-trade talks with Mexico.

But Ford and Toyota called the queries routine.

— Jeremy Sinek

VW signs marketing pact

HUNTSVILLE, Ala. — Volkswagen AG has signed a letter of intent with Control Data Systems Inc. and Intergraph Corp. to jointly develop and market simultaneous engineering solutions for the automotive and other markets.

The German automaker will be the first to use technology developed as a result of the agreement.

Big '91 GM wagons recalled

DETROIT — General Motors is recalling all 1991 Oldsmobile Custom Cruiser, Buick Roadmaster and Chevrolet Caprice wagons to correct a defect that could cause seat belt failure in a crash.

The plastic covering for the shoulder belt guide loop may crack and expose the steel subplate, GM said in a letter to customers and dealers. In an accident, the exposed steel subplate could cut the seat belt webbing, possibly resulting in greater severity of injury to passengers.

GM exports rise in '92

DETROIT — General Motors said its exports of North American-produced cars and light truck increased in the first half of the year.

GM's exports to the Middle East totaled 31,979 in the first six months of the year, compared with the 28,781 units in 1991. GM said exports to Europe totaled 9,922, compared with 8,988 for the first six months of 1991.

Shipments to the Far East totaled 3,552, up 23 percent over the same period a year ago. Car and truck shipments to Puerto Rico were 5,064, a 40 percent increase over the first half of 1991. GM said its Saturn subsidiary began selling cars in Taiwan in June and sales figures indicate strong interest.

briefly

What does a boss know?

Luxury carmaker **BMW AG** strenuously denied a report in the London *Sunday Times* that said it was interested in bidding for **Rolls-Royce Motors Ltd.** Although a spokesman stopped short of saying that BMW Chairman Eberhard von Kuenheim was misquoted, he said von Kuenheim's remarks were "misinterpreted." Von Kuenheim told the *Times* he was interested in acquiring the famed British marque from **Vickers PLC**, but said, "The question is how much we would have to pay. Rolls-Royce needs a lot of investment . . . this could run into hundreds of millions of pounds."

NO MORE MILLION — John Rock isn't pretending that **Oldsmobile** will be able to return to the million sales a year level it enjoyed as recently as 1986. "We need to carve ourselves out something that will give us half a million units of sales on the down side of the market and 650,000 to 700,000 units on the up side of the market. I don't want much variance between the down and the up. This going from a million units to 450,000 units, that's too hard on everybody."

SHOULD IT BE A SIT-IN? D.C. area dealers with a subtle streak could build business for the back shop Friday by helping push retrofit shoulder belts for the back seat. Ben Kelley, president of the Institute for Injury Reduction, which is sponsoring the retrofit rally, says adding shoulder belts in older cars could save 6,000 lives a year. The affair will last all day July 24 at the Omni Shoreham Hotel.

JUST US CHICKENS — A crowd of fired-up Democrats held a noisy protest outside the Women's National Republican Club in New York last week, thumping a drum and chanting anti-Bush slogans. By coincidence, the **International Motor Press Association** was meeting inside. Luncheon speaker Philip Guarascio, the marketing and advertising czar for **General Motors**, took note of the crowd and joked: "That's my bosses outside. They want me to get back to Detroit."

VIP TREATMENT — During the Democratic convention, **Cadillac**, **Oldsmobile** and **Chevrolet** offered a variety of vehicles to VIP Democrats. Bill Clinton must have had a C/K truck, because in his acceptance speech, he said his party is for people who drive pickups, and the Republicans are the party of limousines. **GM** furnished 200 vehicles; 300 are planned for the GOP convention.

VIP, EUROPE STYLE — When the leaders of the world's seven richest democracies gathered in Germany for the G-7 summit, they were followed by journalists. To move the VIPs around, cars were provided by **Mercedes, Audi** and **BMW**, said Udo Corts of the federal government's press office. Journalists were ferried around in **Volkswagen** buses.

Show that crown

King Harald V of Norway can tool around in style in his Cadillac Brougham limousine convertible, but the driver stays inside. The ragtop, by Florida's Coach Builders Ltd. Inc., is padded, insulated and powered.

SELL MORE CARS!

"In the 80's we used to sell an average of 50 units a mo. at very little gross. Today we are selling triple the amount of volume & our grosses have doubled using the sales / advertising techniques of AdVance Advertising Consultants. Thanks Vance!"

Sales in Canada fall 8% in 1st half

Economy is rough; buyers are cautious

JEREMY SINEK
Staff Correspondent

TORONTO — In recession-wracked 1991, when new-vehicle sales in the United States declined 11.2 percent, the Canadian market dipped just 1.8 percent as sales fell to 1.27 million units.

But in the supposed recovery year of 1992, the U.S. market grew 5.1 percent in the first half, and Canada's sales were down 8.2 percent. As in the United States, trucks are outperforming cars, but both show declines in Canada. Cars are down 10.9 percent; trucks are off 2.2 percent.

Canada's market was off just 1.4 percent in the first quarter but has posted double-digit declines each month since then.

That has led General Motors of Canada to revise its projection for 1992: "We were looking to come in at, or slightly above, the levels of 1990 and 1991," said spokeswoman Tayce Wakefield. "Now, we're looking more at 1.25 million."

Canadian car and truck sales totaled 1.29 million in 1990 and 1.27 million in 1991.

The Canadian economy is being buffeted by many of the same forces as the U.S. economy, only more so. Canada's unemployment rate climbed from 10.3 percent on Jan. 1 to 11.6 percent in June.

Although interest rates have tumbled — the benchmark bank rate is down from 14 percent in April 1990 to under 6 percent — they are still high in real terms, with inflation at only 1.6 percent.

Consumer confidence is further eroded by Canada's continuing constitutional crisis, in which the unity of the country is said to be at stake.

But there is plenty of morale-boosting news from the manufacturing side. Production of Chrysler Corp.'s LH sedans has begun in Bramalea, Ontario, and its minivan plant in Windsor, Ontario, is running at full tilt.

Ford Motor Co. recently announced a $1.7 billion (U.S.) investment to re-equip its Oakville, Ontario, plant to build a new minivan in 1993 and to re-open Windsor engine plant No. 2 for a new family of truck engines in 1995.

GM's Ste. Therese plant in Quebec will reopen in the fall to build the new Chevrolet Camaro and Pontiac Firebird, and uncertainty over the future of the Oshawa No. 2 plant in Ontario has been allayed by news of continued product for the 1994 model year.

The export sector of Canada's overall economy has been looking more robust, helped by a decline in the Canadian dollar, now trading around for around 83 cents after peaking at 89 cents last year. If the U.S. economy continues to recover, it will help Canada, its largest trading partner. ■

USED CAR FINANCING FOR CREDIT TURN DOWNS

Since 1972 Credit Acceptance Corporation (CAC) has established a proven track record for no-risk, no-recourse, no-repurchase financing for high risk used car buyers. CAC provides funding combined with the down payment to give you a guaranteed profit on every transaction. With CAC financing, your dealership can:

- Make a guaranteed, up-front profit on every used car sale.
- Eliminate risk with no-recourse financing.
- Enjoy all the advantages of "buy here, pay here" financing without the risk or hassle of handling collections.

YOUR INVITATION TO A FREE SEMINAR

We are so confident that CAC can be of benefit to your dealership that our informative seminars are free of charge. Space is limited, so call Richard Vanderport at **800-634-1506, extension 410,** to register today.

New cars, marketing fuel Mazda sales in Canada

JEREMY SINEK
Staff Correspondent

TORONTO — Mazda seems to have hit the sweet spot in Canada. While June's 11.8 percent decline was another downer for the industry as a whole, Mazda Canada Inc. posted a 19.2 percent gain.

And it wasn't a flash in the pan. For the first half, Mazda was 9.6 percent ahead of the year-ago period, with a 19.7 percent gain in car sales offsetting a 6 percent dip in trucks.

Marketing director Peter Whaley says the firm is on target to meet its goal of 63,000 sales in 1992. That would be a 12.7 percent gain over 1991 and would be the sixth growth year in a row since 1986, when 30,077 Mazdas were sold in Canada.

Whaley attributes the gain to competitive products, an expanded and effective dealer network and more advertising and publicity for Mazda in Canada.

The introduction of five new cars since October (MX-3, 929, RX 7, MX-6 and 626) was accompanied by a substantially increased marketing budget. "And there was a lot of automotive press on Mazda during that period," says Whaley. "That certainly got the name in front of people who may not even have known about Mazda before."

Mazda's unprecedented win in the 1991 LeMans 24-hour race also helped: "We did a campaign on the LeMans win that went from right after the race (in June) through the end of December, and that tested out very well."

In addition, says Whaley, "The new dealers we've appointed now have a lot of experience with Mazda, and they're starting to come on strong for us." The dealer count has grown from about 135 in 1987 to 182. ■

Moody's predicts credit rating drop

NEW YORK — The credit quality of American, European and Asian automakers will likely decline slightly over the next year or two, according to a Moody's Investors Service forecast.

The firm cites slow demand for new cars, shortening product life cycles and stiffening global competition for the expected decline to an average of A3 from the current A2. That means higher interest rates to borrowers.

American automakers will have particular difficulty, Moody's said, because of "mammoth" health care and retiree benefit costs.

European automakers are vulnerable to Japanese competition, especially those who depended on the previously protected markets of Italy, France and Spain.

Moody's said the problem for Japanese is cash for plant investments, which "could constrain the financial flexibility of auto manufacturers, particularly if domestic demand . . . remains weak." ■

Saturn keeps sales per dealer lead; Toyota slips

KAREN DETKOWSKI

taff Statistician

A drop in Toyota sales put Honda dealers in second place behind Saturn in June's sales-per-dealer tabulations and shuffled other Top 10 place holders.

According to *Automotive News'* ales-per-dealer calculations, 25 makes reported increases for the month of June. This was the highst number reported for the second quarter, and the third-highest total or the first six months of the year.

The Mitsubishi car increase of 17 units per dealer was the largest or the month. The company reported its best sales month in more han a year and a 72.0 percent inrease above May. The Diamante had its most successful month ince February 1991.

Saab dealers posted their highest ales month since August 1987, delivering 4,025 cars. The dealer sales verage rose to 12 units, up from ive per dealer in May. Contributng to Saab's 140 percent sales inrease were special lease and retail inance programs. AN

GM begins ad campaign in China

Target audience includes government officials

ARLENA SAWYERS

Staff Reporter

A half-page newspaper ad featuring a 1992 Buick Park Avenue opened General Motors' first ad campaign in China.

The print-only campaign began June 24 in three national Chinese newspapers to coincide with the 1992 Beijing International Automotive Industry Exhibition, held in the capital city in late June.

While GM vehicles have been available in China for several years, this year's auto show was less component- and auto parts-oriented than it has been in the past and more akin to the sophisticated shows held in the United States and Europe, said Sheri Perelli, GM director of marketing communications in Asia.

In the past, GM reached its Chinese market one-on-one.

"There were product displays, video walls and press activities," said Perelli. "In the past, manufacturers had one or two cars. GM had six cars (this year). This marked a new era in automobile sales in China. It was a more comprehensive marketing experience."

The ads appeared in the Chinese language *People's Daily* and *Economic Daily* and the official English-language publication, *China Daily*. They will run periodically throughout 1992.

The campaign targets government officials, worker cooperatives and joint-venture participants because private-car ownership is virtually non-existent in China.

Though China has the world's largest population — about 1.2 billion — last year it had the world's third lowest rate of car ownership, 0.27 per 1,000. But GM, like other manufacturers, believes it's only a matter of time before the vast China market opens.

The headline underneath the picture of the car reads: "One out of every six new vehicle buyers in the world chooses GM. Now you can too."

The copy explains that several GM cars were on display at the auto show and that last year GM sold more than 7 million cars and trucks worldwide. The ad points out that Cadillac, Buick, Pontiac and Chevrolet vehicles are available through Sofrasia Ltd., GM's only authorized dealer in China.

The campaign was created by McCann-Erickson-China, which set up shop two months ago. McCann also handles GM advertising in Hong Kong, Taiwan, Singapore, Malaysia and Thailand.

James Moore, director of GM coordination in McCann's Asia/Pacific region, said the campaign will later include billboards in Shanghai and Beijing.

He said the agency is also looking at the possibility of doing a direct-mail campaign. AN

TRUCKS

Kenworth K300 widens choices

KIRKLAND, Wash. — Kenworth Truck Co.'s new K300 series low cabovers, replacing its previous Brazilian-built Mid-Rangers, have 1,000 pounds more payload, a choice of seven wheelbases and major chassis and powertrain changes.

Production began at Ste. Therese, Quebec, in July. The 30,000- and 33,000-pound gross vehicle weight trucks use Cummins B- and C-series engines and Eaton as the sole supplier of transmissions, clutches, axles and brakes. Allison's automatic transmissions are also available.

Kenworth expects 100 dealers, twice the current number, to sell the trucks by early 1993. Cabovers account for 10 percent of total medium-duty sales. Kenworth and Peterbilt had about 8 percent of the market in 1991.

Peterbilt picks Cat engines

NEWARK, Calif. — Peterbilt Motors Co. selected Caterpillar to supply standard engines for all its trucks as of July 1.

Caterpillar's 3176 is now standard on all Peterbilt Class 8s and the Caterpillar 3306C on its medium-duty 320 low cabover.

Body builders parley with Big 2

The National Truck Equipment Association in Livonia, Mich., will hold its Annual Truck Product Conference with Chevrolet and Ford on Sept. 14-15.

The conference provides a forum for open communication between body builders and chassis engineering, sales and marketing personnel from the auto companies.

Chevrolet and Ford plan to discuss powertrain and fuel system changes, CFC replacements, power takeoff and pickup box removal on their 1993 model commercial trucks and chassis.

Truck sales gain speed

Class 8 orders rise 52.4% in first half

JOSEPH BOHN
Truck Editor

The medium- and heavy-truck market continued to percolate in June with all segments except tiny Class 5 showing increases.

Equally encouraging were new-truck orders including vehicles still to be built in the next few months.

Class 6-8 new-truck orders totaled 131,800 units for the January-June period, up 42.3 percent over the year-earlier period. Class 8 truck orders alone surged 52.4 percent during the first half of the year to 78,500, manufacturers said.

The Motor Vehicle Manufacturers Association said Class 8 sales rose 30.2 percent in June to 10,458. Six-month sales were up 11.9 percent to 53,767, MVMA said.

Ford Motor Co., with the industry's biggest gain in Class 8 for the six-month period, said pent-up demand is now driving the market.

"During the recession, most of the tractors continued to run, even as operators deferred purchases," said John Merrifield, Ford heavy-truck general sales and marketing manager. "Now, those trucks need to be turned" because of high mileage and wear.

The heavily incentivized and more fuel efficient new models are attractive to truckers at a time when their improving income puts them in better a position to buy. Surveys, such as that conducted by *Road King* magazine, show incomes of owners-operators rose 14 percent last year.

Ford's Class 8 sales were up 81.9 percent in June and 58.5 percent for the first six half, according to MVMA. Ford moved from last place among seven major competitors a year ago to fourth for the first half of 1992. It ended the period 492 sales behind third-place Volvo GM Heavy Truck.

The upswing occurred even though Ford's strongest market, severe-duty vehicles (such as dump trucks and garbage trucks), has not recovered as rapidly as the over-the-road segment.

Merrifield credited the growing popularity of the Aeromax 120 model and the Louisville plant's deftness in handling new orders.

While most Class 8 competitors enjoyed first-half sales increases, Navistar International and Mack Trucks continued to struggle, each suffering a sales decline. Mack's slide has taken it almost to the bottom of the market.

Mack is in sixth place, just 272 units ahead of last-place Peterbilt.

Medium-truck sales have not increased at the same pace as Class 8, but they are showing steady improvement. Among medium-duty segments, Class 4 was up 4.5 percent in June; Class 6, up 6.3 percent; and Class 7, up 8.1 percent.

Class 5 had the only decline with a 2.3 percent drop in June from last year. As the industry's smallest segment, it accounted for only 291 sales in June and 1,768 for the first six months of 1992. ■

European truck market headed for second decline

LONDON, England — The West European market for trucks over 13,200 pounds gross vehicle weight is expected to decline 6 percent in 1992 after falling 1.4 percent last year.

West European sales are expected to drop to 258,000 units this year, compared with 275,000 in 1991, according to DRI Europe.

Germany's market, a major source of growth in 1991, is expected to decline later this year, reflecting less economic growth and a weakening of catch-up demand in the eastern part of the country, the research firm said.

But a recovery is anticipated in the United Kingdom and Spain, and the rate of decline is expected to slow in France and Italy.

The longer-term outlook is still clouded, though, by the anticipated continuing fall in German demand. That is due principally to deregulation of road transportation.

The combined light- and medium-truck segment, where sales in Germany account for a large portion of demand, is expected to decline steadily in the 1990s.

In the mid-1990s, that part of the market will be further weakened by new European Community licensing requirements, DRI said. Drivers will be required to have special truck operators' licenses for vehicles of 7,000 to 16,500 pounds gross vehicle weights.

The new regulations are expected to buoy sales of trucks just under 7,000 pounds gvw but reduce overall West European light- and medium-truck sales to 88,000 units by 1997, down from an estimated 95,000 in 1992.

The planned deregulation of Germany's trucking industry is expected to cause operators to postpone purchases. ■

VW pins revival on 3 new models

Golf, Jetta, Euro arrive this fall

LINDSAY CHAPPELL
Staff Reporter

Battered by two years of dwindling sales for its key products, Volkswagen of America Inc. is counting on a trio of replacements this fall to invigorate the line.

The Euro, a new front-wheel-drive van replacing the Vanagon, will reach the market in August, and all-new Jetta and Golf/GTI models will follow.

"Things will get better for Volkswagen," said company spokesman Larry Nutson. "We're here to stay."

For the first six months of this year, while the overall market rebounded, Volkswagen sales were off by more than 18 percent. For 1991, the carmaker was 29 percent behind 1990.

Its sale total last year of 96,723 VW units was the lowest since 1958, when the company offered only two products. Sales for the first half of this year were just over 40,000.

Sales of all imported cars in June, including imports by the Big 3, were 6 percent ahead of June 1991. Sales for the first half of 1992 remain about 1 percent behind the first half of 1991.

Volkswagen has been hit by a combination of economic recession and aging key products. Its rear-drive Vanagon, for example, sold only 40 units in June — down from 600 a year earlier.

"We're basically out of the car business right now," Nutson said.

The Jetta, the company's sales leader, was off more than 16 percent in the first half of the year. June sales were off only modestly, buoyed by customer response to a new lease program.

The company expects Jetta sales to rebound in November, when the all-new model will be available. Among other new features, the compact will offer a V-6 engine.

In addition to introducing the three new vehicles this fall, Volkswagen is inaugurating a new factory arrangement for North America. It invested $1 billion to make its plant in Puebla, Mexico, the exclusive supplier of Jettas, Golfs and GTIs for the United States, Canada and Mexico.

Plant capacity is 250,000 units. It will build about 100,000 Beetles and a small number of older-model vans for the Mexican market, leaving capacity for about 140,000 units of the other cars.

Last year, the company sold about 52,000 Jettas and Golfs in the United States.

Jaguar XJ220 speculators taking a financial beating

VAUGHAN FREEMAN
Special Correspondent

LONDON — Some would-be buyers and speculators in Britain who paid the equivalent of $95,000 for non-refundable options on the Jaguar XJ220 three years ago are now selling at big losses because the market for exotic muscle cars has collapsed.

Because only 350 of the 200-plus-mph supercars will be built, options to buy one at a firm price of £400,000 (about $750,000) sold out quickly and were often resold at a quick profit. But the recession has hit the British new-car market especially hard.

"When the XJ220 was announced, I was selling Porsche 959s for £500,000 (about $950,000) apiece," said Tom Hartley, who owns a dealership in the English midlands specializing in exotics. "Now, they sell for £165,000 (about $315,000.)"

Hartley said he has brokered three XJ220 contracts since the car was launched.

His first, sold three years ago to a Japanese investor, fetched a premium of about $375,000, he said. The second, sold one year ago, went at a premium of $190,000.

But two weeks ago, Hartley said, he bought a contract for £20,000, about $56,000 *under* its face value of about $95,000.

Robert Brooks, who owns a car auction in London, also has seen the price of the XJ220 and other exotics collapse. "The investment side of the XJ220 is skating on very thin ice."

"A lot of people bought options on the car as an investment. Now, I have to wonder if some won't walk away from the contract on the grounds that a £50,000 loss is the best they'll ever do on the car."

Deliveries of the car began in June. It is built by Jaguar Sport Ltd., a joint venture of Jaguar and Tom Walkinshaw Racing.

The first 100 are scheduled to be delivered this year and the remaining 250 next year. After that, the XJ220 factory will be handed over to Aston-Martin.

Although 250 XJ220s are scheduled to be exported, none will go to the United States. The supercar meets only European standards for emissions and safety.

Smyrna cost-cutting added to Nissan's surprise profitability

LINDSAY CHAPPELL
Staff Reporter

Flipping off light switches and reducing cardboard waste at Nissan Motor Manufacturing Corp. U.S.A.'s auto plant in Tennessee helped boost corporate profits for its Japanese parent last year.

No one seemed more surprised than local officials by comments from Tokyo last month crediting Smyrna's cost-cutting efforts for helping Nissan pocket a $675 million profit.

Analysts at the time were predicting gloomier results.

Nissan officials won't say how much their aggressive waste reduction program contributed toward the profit, but the payoff has been real.

"We didn't know it would help as much as it did, but we far outperformed even our own productivity targets," said Emil Hassan, vice president of operations at Nissan Motor Manufacturing Corp. U.S.A. in Smyrna, Tenn.

During the fiscal year that ended March 31, Smyrna built 262,000 Sentras and light pickups, an increase of more than 23,000 vehicles over the previous year. Even while putting out more vehicles, Nissan aimed at reducing controllable labor and overhead expenses — everything but fixed costs — for the year by 7 percent. In fact, the savings exceeded 10 percent, Hassan said.

"This year, we've targeted 7 percent again," he said. "You cannot expect to make a 7 percent gain year after year, but we will try."

Hassan said the company looked for better efficiency throughout the plant. Workers were asked to turn off lights when the assembly line stopped for lunch breaks and to avoid waste of indirect materials, such as sandpaper and buffing pads.

Some of the tactics have been decidedly low-tech — such as improving shop-floor cleanliness. The renewed emphasis on housekeeping meant less clutter and better organization at work stations.

Nissan saw results from a two-year effort to have suppliers ship their parts in returnable containers. That meant fewer cardboard boxes around the work place, less waste to contend with and lower labor and handling costs.

"No idea was too small to consider," said Hassan, who declined to reveal how much money the campaign saved.

Inventories drop to 59 days

GWENDOLYN ZONGHETTI
Special Correspondent

Strong June sales cut the industry's inventory of cars and light trucks to a 59-day supply on July 1, down from 68 days June 1.

Domestic car inventories declined to a 49-day supply on July 1 from 61 days a month earlier. Imported-car stockpiles dropped to 70 days from 86 days.

Domestic light-truck supplies fell to 63 days from 72 days on June 1, and import truck inventories rose slightly to 84 days from 83 a month earlier.

"Import trucks simply are not selling as well as American trucks," said auto analyst Wendy Beale-Needham of the New York brokerage Smith Barney, Harris Upham & Co.

Chrysler Corp. held steady at a 60-day supply, and General Motors' stockpile fell to 63 days from 69 a month earlier.

"I think Chrysler is doing a good job handling its inventories especially with the uncertainty of introducing its new models," said Beale-Needham. "Chrysler now has to start building a responsible inventory of new cars."

Carefully tailored production schedules for Ford Motor Co. resulted in a decline in days' supply to 61 from 66 on June 1.

Inventories also fell for the most of the major Japanese-based companies. U.S.-built Honda Accords had their best sales month of the year at 35,000 units, and American Honda Motor Co.'s inventory fell to 57 days down from an 81-day supply on June 1.

NISSAN

The trend favors Michigan

continued from PAGE 7

the Akebono Brake Systems Engineering Center and Asahi Glass are near Nissan's facility.

SPACIOUS DIGS

The Farmington Hills facility consists of two interconnected buildings with 340,000 square feet of floor space sitting on approximately 50 acres.

In one building are the prototype testing labs and a styling studio. This building houses a shower chamber, chassis alignment machines, a salt-spray booth, a four-post shaker, a metal analysis lab, a lateral shaker and an anechoic chassis dynamometer.

The second building is home to research and development. The first floor houses design and test engineering for prototypes. The first floor also has a large fitness center equipped for aerobics classes or fitness machine workouts.

The second floor is the vehicle engineering area where everything from interiors and safety systems to chassis and fuel systems are handled. The third floor has the executive offices, technical planning and service parts engineering.

The building also has an 11,500-square-feet atrium with 50-foot ceiling. It is used as a multipurpose gathering area and cafeteria. The building also includes conference rooms and private dining rooms.

TOP TALENT POOL

Other foreign carmakers have built research and engineering centers in the Detroit metropolitan area. They have discovered what

> ❛It is not easy to hire such people (as auto engineers) and even more difficult to move them.❜
>
> **KAZUMASA KATOH**
> NISSAN R&D

Nissan's Kazumasa Katoh, director of the technical planning and the corporate planning offices, described as a rich strata of automotive engineering and technical talent.

Katoh said a Nissan survey conducted in 1989 revealed that about 90 percent of America's auto design engineers were located in the Detroit area. No surprise.

"That really represents about 20,000 to 30,000 individuals with these highly specialized skills," said Katoh. "But it is not easy to hire such people and even more difficult to move them."

What the initial survey did not reveal is the difficulty and expense of getting seasoned, well-paid engineers with deep community roots to leave Michigan.

Nissan and others quickly discovered that those individuals would require enormous salary increases to already healthy pay and benefits to duplicate their lifestyles in other locations. So Asian manufacturer mountains moved to the engineering Mohammeds.

"In the 1970s and early 1980s, it was almost the fashion to establish design facilities in California," said Katoh. "But the current trend is to style, design and engineer in Detroit. For dream cars, California is fine. But for real vehicles, Detroit is it."

Nissan's drive to purchase U.S.-made componentry is part of the company's desire to transfer increasing responsibility to its design, engineering, manufacturing and marketing operations in North America and Europe, in addition to its Japanese facilities.

Nissan requires that its suppliers have engineering and testing capabilities for their parts.

Traditionally, carmakers would design and engineer the part. Then, engineering drawings would be delivered to the supplier. Nissan engineers say this allowed no time for changes that might enhance quality, reduce cost or simplify manufacturing.

Nissan's "design-in" approach to parts procurement requires component supplier engineers and supplier development engineers to work with Nissan to enhance quality and reduce cost. To facilitate the close working relationship, the center features small rooms in which suppliers can set up temporary offices when working with the company. ■

Big 3 to develop new crash dummies

ARLENA SAWYERS
Staff Reporter

In the spirit of safety cooperation, the Big 3 have joined forces to develop crash dummies that more closely duplicate human body response in vehicle crashes.

Billing itself as the Occupant Safety Research Partnership, General Motors, Ford Motor Co., and Chrysler Corp. announced the partnership last week.

The alliance allows the auto companies to reduce their individual investment and avoid duplication by pooling technical and financial resources.

Ultimately, the goal of the consortium is to provide technology for safer vehicles.

"We're very excited about what the consortium can do," said Robert Munson, director of the automotive safety office at Ford.

"We're going to develop a more human-like dummy and share the information through seminars and papers. We won't hold it close to the vest."

GM developed the Hydrid III crash-test dummy in 1989 to study the issue of lap belt submarining.

Jack Dinan, spokesman for GM's research and environmental staffs, said a "superior human surrogate" will allow researchers to study vehicle crashes as they relate to closed head and neck injuries; injuries to lower extremities that include the feet, ankles and lower legs; and injuries to the midsection, which includes the heart, lungs, liver and bowels.

"Our goal is to reduce and mitigate injury and reduce fatalities," said Dinan. "The ultimate benefit is to the consumer."

Dinan and Munson said the group has not received any federal funding, but they did not rule out the possibility. They said the group will work closely with the National Highway Traffic Safety Administration.

"The United States government has a vested interest in this," said Dinan.

The alliance is the ninth such effort by the Big 3. Among the other joint projects are battery research for electric vehicles and cleaner vehicle emissions. ■

There were 8 selling days in the period this year and 8 last year.

Early July sales drop

JIM HENRY

Staff Reporter

NEW YORK — Mostly because of a decline at General Motors, light-truck sales for early July slipped below the year-ago period for only the second time in 1992.

Combined car and truck sales slipped 4.7 percent to 302,815, including estimates for Chrysler Corp. and for most imports, which report sales only once a month. There were eight selling days for the period this year and last.

Truck sales, including pickups, minivans and sport-utilities, fell 2.8 percent to 108,794. Early May was the last time that 10-day truck sales slid below 1991.

GM accounted for most of the decline, reporting a drop in light-truck sales of 8.7 percent. Chevrolet trucks were 15.7 percent below last year. On the other hand, GMC Trucks had a 25.9 percent increase, mostly because of a 52.8 percent leap for the R/V pickup.

Car sales for July 1-10 fell 5.8 percent to 194,021. The decline follows an increase in rental-car sales last month as fleets stocked up for a summer travel boom.

Ford Motor Co. saw its 10-day car sales rise 14.6 percent. That includes a 34.7 percent jump for Mercury's domestic-built cars, which are popular with rental fleets.

Ford truck sales were about even with last year, up 1.3 percent to 32,388.

Automotive News estimated Chrysler Corp. gained 6.0 percent to 36,782 units, with an improvement in both cars and trucks.

Japanese nameplates fell 6.9 percent overall.

American Honda Motor Co. Inc. plunged 28.6 percent to 10,586.

Nissan Motor Corp. in U.S.A. dropped slightly, down 1.6 percent.

Toyota Motor Sales U.S.A. Inc. also posted a small decline compared to a strong year-ago period, off 1.0 percent to 21,123 cars and trucks.

MINIVANS

Sales keep rising, but limit is in view

continued from PAGE 1

Group. His studies now "point to a slowing in the van market, not a beating." He sees 1.2 million minivan sales in 1995.

One reason for the change is that makers have been trying to broaden their minivans' appeal by making them more like cars. What whetted people's appetites for minivans in the 1980s — cargo space and seven seats — is simply basic fare today, says Bill Bivens, manager of truck and utility vehicle marketing at Nissan Division.

Now, customers want their minivans to be like sedans — with all the safety and convenience that goes with them, Nissan says. The company likes to compare the Quest to its own Maxima. The Quest's 3.0-liter V-6 comes from the Maxima. Though the Quest/Villager is classified as a truck, it has 5-mph bumpers and meets more-stringent passenger-car safety standards. One glaring omission for 1993 — an airbag — will arrive next year.

Still, there are limits to what you can do with what Nissan's design vice president Jerry Hirshberg calls a "large, flexible volume on four wheels."

Given those constraints, and not wanting to make it too big, Nissan has tried to make the Quest/Villager more versatile by jockeying the back seats.

The middle and rear seats can seat five, or be removed, or slide into new positions, or fold into shin-high tabletops.

Nissan hopes such features will help people overcome their reluctance to buy minivans. As Nissan sees it, people don't really *want* to buy minivans, they *need* to. And the more style and performance and handling the makers can provide, the less people will regret moving out of a sedan.

Some possibilities for minivan spinoffs will also address the apologists. One industry analyst says several automakers are exploring concepts in the upper-$20,000 range.

Chrysler also sees brighter prospects for luxury minivans. Chrysler's Town & Country, whose priciest version is the market's most expensive at $26,611, has begun to show some sales life. Its 7,880 sales through June have already passed the total for all of 1991, thanks in part to juicy incentives.

The growing availability of long-wheelbase versions has also created room for movement within minivans.

Chrysler's Winter says that entry-level buyers tend to buy short-wheelbase versions. As they become more affluent, they switch to the longer wheelbase.

Still, there may be limits to how much people will spend on a vehicle that will be subject to the daily ravages of muddy sneakers and toppled ice cream cones. "I don't envision $50,000 to $60,000 minivans," Winter says.

But demographics show more room for growth. By 2000, the biggest chunk of the adult population will 35 to 44 years old — the ripest time for minivan purchasers, according to Nissan's data. The number of U.S. families with children is projected to rise through the end of the decade.

Automakers also bank on some current minivan owners to buy again once their nests are empty — there will be grandkids to haul around.

Even now, Lincoln-Mercury expects about a fourth of its Villager buyers to be folks whose kids have grown. The median age for a Mercury customer is 55 years old.

Beyond age, there are other limits on growth.

William Pochiluk, president of the Autofacts Inc. consulting firm, thinks prices will become more of a barrier once minivans are required to meet passenger-car safety standards later in this decade.

In addition, he says, minivans will have to compete for sales with another part of the truck world that is becoming more and more like cars: sport-utilities.

Altima, Quest to test Nissan boss

DAVID VERSICAL

National Editor

DEL MAR, Calif. — No one was more surprised than Earl Hesterberg when he was appointed head of Nissan Division's U.S. sales arm last summer.

After all, at 37, he was far younger than most division general managers in the industry.

He had spent most of his career in parts and service — not sales — first at Ford Motor Co., then at Nissan Motor Corp. in U.S.A

And he had only 18 months under his belt in a national car sales position, as the No. 2 man at Nissan's Infiniti Division.

Hesterberg: a new Nissan

"This job was probably as far from my mind as it was from anyone else's," Hesterberg admitted in an interview last week. But Nissan tapped him for his youth and his smarts. Now, after a sales year that's been "a little tougher than expected," Nissan's general manager faces his biggest tests:

- Sell the 50,000 Nissan Quest minivans that Ford Motor Co. will build for Nissan annually. Only once has an import minivan (Toyota Previa in 1991) done that.
- Double the sales for Altima, this fall's successor to the Stanza. That would make Nissan a contender in the heart of the market, the family intermediate segment.

To add a twist to the challenge, Hesterberg took over just as Nissan was beginning a massive overhaul of its regions. Under the program, the heart of Nissan's field operations has been shifted away from its Gardena, Calif., headquarters to 97 "dealer operations managers" who serve six to 15 dealers.

The switch from 11 to seven regions is now finished. Now, all that remains is the execution. At stake is another element in Hesterberg's plan: to elevate Nissan's brand image to a level with Honda and Toyota.

"We still have quite a distance to travel," he says.

His journey will be watched closely. Sales and profits at Nissan Motor Co. Ltd. in Japan are suffering, and U.S. sales of Nissan models slipped from a 1985 peak of 830,767 to 548,460 in 1991.

Hesterberg says he doesn't feel any extra pressure because of the parent company's struggles. "I always felt a different kind of pressure — and that was the kind of pressure that you put on yourself."

As a kid, he spent more time playing sports than dreaming about cars. He played center on a football scholarship at Davidson College in North Carolina. He later earned a master's in business administration at Xavier University in Cincinnati, his home town.

His first job at Ford was answering phone calls from angry parts and service customers. He says the auto business has consumed him ever since.

And while he struggles to describe his management style, he says his biggest problem is wanting to know everything that's going on. That can lead to overmanaging. "I have to work hard to stay out of things," he says. "You have to trust your people."

Dealers say that while the localization plan is a good long-term strategy, it has disrupted the entire organization. Eight hundred people have shifted jobs already, and many have been more focused on where and what their next job would be than on selling and servicing Nissans.

With that distraction and the wait for new products, Nissan sales have slipped a bit this year while the overall market has improved.

But the program represents Nissan's plan to rank with Lexus and Infiniti and Saturn in customer satisfaction. While Hesterberg says his 18 months at Infiniti were invaluable, "you can only learn so much from people who started dealerships from scratch and have brand new facilities."

The dealer operations managers will live in the community where they work and will be Nissan's eyes for that market's needs. They'll also be Nissan's conduit to the showroom.

He concedes that the company must do far more talking to its dealers about how it does business. Hesterberg wants to codify a few crucial processes — such as delivering parts and taking a service order — and have them done the "Nissan way."

He plans to deliver the first process, on vehicle delivery, to dealers at their meeting next month in Nashville, Tenn.

The Quest and the Altima will play key roles in expanding Nissan's image another way. Nissan officials point out that the 1985 sales peak was an artificial high because the company was pushing low-profit Sentras and pickups from its U.S. assembly plant.

Since then, cars like the 240SX and 300ZX have helped give Nissan an image as a go-fast company. Now, Nissan wants to broaden its following to the sales mainstream.

The Quest will help by bringing new shoppers into the showroom. Nissan now sells fewer than a third of its cars to families with children. Three-fourths of Quest buyers are expected to fit that mold.

The Altima, too, will stretch Nissan's reach. Nissan has never sold more than 100,000 Stanzas in a year. Hesterberg wants to reach 150,000 Altimas by 1995, and Nissan has built a 200,000-unit plant in Smyrna, Tenn. to provide them.

As with the rest of his challenges, Hesterberg says he's not wasting energy worrying about the scope of this one.

"Are we too high in our expectations?" he asks.

"I guess we're going to find out.

Automakers tinker with incentive deals

ARLENA SAWYERS
Staff Reporter

Cadillac, Hyundai Motor America, American Honda Motor Co. Inc., Volkswagen United States, and Saab Cars USA Inc. are among the manufacturers making incentive changes.

Cadillac increased the customer rebate on 1992 DeVille, Brougham and Fleetwood from $1,500 to $2,000. The plan expires Sept. 23.

incentive WATCH

Hyundai is paying customer rebates of $1,000 to $2,000 on 1991 cars and $500 to $2,000 on 1992 cars until Oct. 2.

Honda is paying dealers from $250 to $1,500 on 1992 Accords based on quota, and $400 on 1992 Civics.

Honda's **Acura** division is paying a $500 dealer incentive on 1992 Integra. Honda and Acura programs expire Aug. 3.

Through July 31, **Volkswagen** is paying factory-to-dealer incentives of $500 to $1,500 on most of its cars.

Saab extended its special lease and retail finance plans through Aug. 3 on 1992 Saab 900 and 9000 models.

The lease plan requires no money down and payments as low as $317 a month for 48 months on the 900 model and $348 a month for 48 months on 9000.

The retail finance program offers finance rates as low as 2.1 percent for the 9000 and 3.9 percent for the 900. The retail finance program requires a 25 percent down payment.

Special Correspondent Charles E. Ramirez contributed to this report.

INCENTIVE WATCH— DEALER INCENTIVES

NEW PROGRAM

ACURA (1992 models; expires Aug. 3)	
Integra	$500
HONDA (1992 models; expires Aug. 3)	
Accord	$200-1,500 based on quota
Civic	$400

CONTINUING PROGRAMS

AUDI (1991 models, no expiration date)	
Audi 100 and 200	$1,500
Audi 90	$1,000
Rebates apply to models purchased by dealer from Audi of America port stocks.	
BMW (no expiration date)	
750iL (1991)	$10,000
CHEVROLET (1992 models, expires Sept. 23)	
Corvette ZR-1 (1992)	$2,000
Other Corvette (1992)	$1,000
ISUZU (expires Sept. 30)	
Impluse (1991)	$2,500
Impulse (1992)	$1,500
Stylus (1991 Calif.)	$800-2,000
Stylus (1991)	$800-1,100
Stylus (1992)	$500
*Pickup (1991-'92)	$800-1,600
*Rodeo (1991-'92)	$400-1,400
*Dealer can choose flat payment or one based on number sold.	
Dealer has the option to sharing rebate with buyer.	
LOTUS (1991, no expiration date)	
Elan	$5,000
Esprit Turbo	$11,000-15,000
MITSUBISHI (1991-92 models, expires July 31)	
Mirage	$500-1,000, quota
Galant	$1,000-1,500, quota
Galant VR-4	$500-3,000, based on number sold
(Galant VR-4 payments are in addition to other Galant rebates.)	
Eclipse	7% of sticker, starts with second sale
Pickup	$1,000-1,500, quota
PEUGEOT (no expiration date)	
405	$5,000
505	$6,000
PORSCHE (1991 models, no expiration date. To qualify for the following rebates, dealers had to buy two cars from port stock by Jan. 17.)	
911 Carrera 2, 928	$9,500
911 Carrera 4	$13,500
911 Turbo	$14,000

Loyale	$500
Legacy (invoiced before Feb. 4)	$1,000
Legacy (invoiced after Feb. 4)	$1,500
SUZUKI (expires Aug. 3)	
Swift (1992)	$400-700
Sidekick (1992)	$700-1,500
Swift (1991)	$700-1,000
Sidekick (1991)	$500-1,000
TOYOTA (expires Aug. 3)	
Tercel (1991-92)	0-$300, quota
Corolla (1992)	$700-$1,500, quota
Pickups	$200-1,400, quota
VOLKSWAGEN (1992 models; expires July 31)	
Corrado (exclude V-6), Cabriolet	$1,500
Passat	$750
Jetta, GL and Carat	$500
Golf (exclude diesel), Fox	$500

SHARES

Trucks load up more of market

continued from PAGE 1

Subcompacts make up only about 10 percent of fleet purchases, whereas they normally account for 20 to 25 percent of retail purchases, Pitcoff said.

The full-sized segment also benefitted from new models such as the Pontiac Bonneville and from 1992 being the first full year of availability for the Ford Crown Victoria and Mercury Grand Marquis. Those cars were out of the market for a good part of 1991 due to model changeover, Pitcoff said.

U.S. CAR AND LIGHT TRUCK MARKET SHARES

Car	6 Mos., 1992	Pct. share	6 Mos., 1991	Pct. share

TRUCK SALES GROWING

All light-truck segments are still growing except for compact pickups, which, with 8.0 percent of the market, were dead even with last year.

Light trucks, with their roominess, versatility, car-like comforts and V-8 engine power, have been gaining ground over downsized cars for the past decade.

Compact sport-utilities and minivans were the fastest-growing segment of the truck market in the first half of the year.

Compact sport-utilities, with 7.0 percent of the market, had an 18.6 percent sales increase during the first half.

Chrysler also expanded the entry-level end of the market by re-pricing and repositioning its Cherokee.

The Ford Explorer outsold its next two closest competitors, the Jeep Cherokee and Chevrolet S10 Blazer, by more than 2 to 1

Full-sized pickups, with 8.5 percent of the market, had a 12.0 percent increase during the half.

Ford's F-series truck held a slight 8,982-unit margin over the Chevrolet C/K.

Minivans, with 7.8 percent of the market, are up 12.3 percent. Chrysler, which used retail rebates on minivans for much of the first half, boosted its share of the segment by 4.6 percentage points to 48.6 percent.

Intermediates, the largest car segment, shrank 1.7 percentage points to 24.5 percent of the market.

Subcompacts, the second-biggest car segment, recorded a 10.4-percent increase.

The Ford Escort was the best-selling subcompact. The second-place Toyota Corolla had a 12.5-percent increase, but the third-place Honda Civic lost share.

The compact-car segment, third-largest, accounted for 9.3 percent of industry sales.

Here, there were more losers than gainers. Essentially, longer trade-in cycles and fewer sales of lease and daily rental cars had their biggest impact.

"It hits mid-sized and compact cars the hardest. That's where most of the business is," said Pitcoff.

The luxury segment was dominated by Cadillac gains, including the segment leader DeVille, fourth-place Seville and eighth-place Eldorado. The Mercedes 300 class and S class had strong gains, but the Lexus SC400/SC300, with a 615.1-percent gain, was the fast-growing nameplate.

INCENTIVE WATCH — CUSTOMER INCENTIVES

NEW PROGRAMS

HYUNDAI (expires Oct. 2)	
Sonata (1991)	$2,000

Loyale (awd wagons)	$500

Video instructs dealers on cash reporting rules

LIZ PINTO
Staff Reporter

The National Automobile Dealers Association and Alert International Inc. have produced a video to help dealers comply with IRS federal cash reporting regulations.

In February, new IRS regulations for reporting cash transactions on Form 8300 became effective, increasing penalties from $100 to $25,000 for those caught violating the law.

The video, *Cash Reporting and Money Laundering Controls — an NADA Compliance Guide*, clarifies the issue of what transactions have to be reported to the IRS.

As before, any purely cash transaction over $10,000 must be reported on Form 8300, including those made in foreign currency.

But the new regulations have expanded the definition of cash to include some cashiers checks, bank drafts, travelers checks and money orders.

For example, personal checks are not considered cash under new IRS rules so transactions, even those of more than $10,000, do not have to be reported.

Also, if a cashier's check is used to pay for a car in an amount of more than $10,000 it also is not treated as cash under the rules, so no Form 8300 is required.

But if a dealer sells a car, say for $13,200, and the customer pays cash of $6,200 plus a cashier's check for $7,000, it must be reported to the IRS.

NADA and Alert say car dealers are easy targets for criminals and their money laundering schemes and many car dealers have already been hit with severe IRS penalties.

41 plants are idle this week

GWENDOLYN ZONGHETTI
Special Correspondent

Forty-one car and truck assembly plants in the United States and Canada will be idle this week — 33 for vacations and eight for model changeovers.

This week's vacation schedule includes all 31 General Motors assembly plants in the two countries. The GM plants also will be down next week, and all but five will return to work Aug. 3.

Last week's estimated car assembly in the United States was 106,588, up 23.9 percent over the prior week, which included a contractual holiday. Output also was 15.3 percent over last year.

So far this year, U.S. carmakers have produced 3,169,895 autos, up 5.8 percent over 1991.

Canadian automakers scheduled 13,225 cars last week, down 29.6 percent from the prior week and 24.5 percent below the corresponding 1991 week.

Year-to-date Canadian car production is 587,856, a 3.9 percent decline from 1991.

U.S. truck producers built 70,225 vehicles last week, a 59.6 percent jump above the prior week, but a 2.3 percent fall from the year-ago week.

Year-to-date U.S. truck production is 2,160,681, up 19.3 percent over 1991.

Truck production in Canada last week was 6,630, down 21.8 percent from the prior week, but up 1.5 percent over last year.

So far this year, Canadian truck producers have assembled 573,901 units, an increase of 25.6 percent over last year.

Last week's estimated daily build rate of cars and trucks in the United States and Canada was 39,334, three more during the prior four-day week. The daily build rate was 4.4 percent above the year-ago week.

At the end of the two-week vacation, General Motors' Willow Run, Mich., plant will be down an additional three weeks due to high inventories.

The plant in Doraville, Ga., will be down an additional two weeks to adjust inventories, and the Pontiac, Mich., facilities will be down one extra week for the same reason.

GM's Orion Township, Mich., and Detroit-Hamtramck plants will be idle an extra week after the vacation for model changeover.

The Lordstown, Ohio, van facility worked its second weekend of overtime last week to fill dealer orders.

GM's Janesville, Wis., facility worked overtime last Friday.

Ford Motor Co. slated daily overtime last week at two car plants and two truck plants:

The car plants are Atlanta and Chicago. The truck plants are Louisville, Ky. and St. Louis. The Kansas City. Mo., car and truck plant also worked daily overtime.

Chrysler Corp. has scheduled overtime today at the Sterling Heights, Mich., car plant and the Toledo, Ohio, truck plant. AN

Workers to call Villager buyers

Hourly workers at Ford Motor Co.'s Avon Lake, Ohio, assembly plant will make up the customer relations support team for buyers of Mercury's new Villager minivan, which is built at the plant.

Don Schnur, president of UAW Local 2000, says 20 to 25 of the workers will call Villager owners after they have driven the vehicles at least 5,000 miles.

The objective is to identify any mechanical problems so adjustments can be made in the plant.

"We're pushing the responsibility right down to the level where the vehicles are being built," Schnur said.

If the workers identify problems, Schnur says they have the authority to make changes without the OK of a supervisor.

— Kathy Jackson

Ford to up cash on conversions

DETROIT — Ford Motor Co. is expected to announce a $750 dealer cash incentive on its Econoline van conversions this week, partly in response to Chevrolet's $1,000 dealer cash incentive on G-van conversions during the July 17 to Sept. 24 period.

Amid slump, Honda cuts Accord output

U.S. suppliers told to improve quality

PHIL FRAME
Staff Reporter

Reflecting its changing fortunes in the U.S. marketplace, Honda of America Manufacturing Inc. told suppliers last week that it will cut production at its two U.S. assembly plants by 27,800 units in the next two fiscal quarters and end production of the best-selling Accord at East Liberty, Ohio.

In a letter that was obtained by *Automotive News,* Honda also cautioned its suppliers that its competitors are improving quality at a faster rate, and appealed for across-the-board cost and quality gains. Both Ford Taurus and Saturn are breathing hard on the heels of Honda's two best-selling models, Accord and Civic, in terms of both volume and perceived quality.

"Although we made quality improvements in the 1992 J.D. Power Initial Quality Survey, our competitors made bigger gains," said the letter, signed by Satoshi Imai, Honda's senior vice president of purchasing, and Dave Nelson, vice president of purchasing. "We must do better." A Honda spokesman in Detroit said he had not seen the letter and could not comment.

In the letter dated July 21, the two executives said Honda will cut production at its plants in East Liberty and Marysville, Ohio, by 105 cars per day in the second half of its fiscal year, which ends March 31, 1993. Most of the reduction will occur on Marysville's line No. 2, which builds the Accord.

NO MORE F1? ➤ 36

In all, 27,800 units are being eliminated from Honda's production schedule, about 6 percent of the company's U.S. output of 451,197 units in calendar 1991. The rollback comes on the heels of a 25-car-per-day cut instituted in the fiscal second quarter, which ends July 31.

The company also is trimming production in Japan, where sales are down 7.5 percent in the first six months. The company said it shut its Suzuka plant for five days and the Saiyama plant for four days in the first half to adjust production to sales.

The second-quarter cuts in Ohio

HANS G. LEHMANN/HIDDEN IMAGE

Though Accord production is being reduced in Ohio, Honda's new Civic coupe, snapped here by a spy photographer, isn't expected to be affected. The car goes on sale this fall.

Mazda President Yosihiro Wada has a go-slow strategy for Amati in U.S.

Amati's U.S. plan: stay small, profitable

KRISTINE STIVEN BREESE
Staff Reporter

HIROSHIMA, Japan — When an East Coast dealer offered to erect a palatial 20,000-square-foot building to house his Amati dealership, executives at the Mazda luxury channel had an unusual response.

They said no.

As Amati continues to plan for its spring 1994 launch, Mazda Motor Corp. is distinguishing itself with its less-is-more strategy. It wants a small network of 7,500-square-foot showrooms moving just 50,000 units a year.

While most manufacturers are trying to get dealers to spend

Machining fluids linked to cancer

GM, UAW pay for study by Harvard

KATHY JACKSON
Staff Reporter

A confidential report from Harvard University scientists says there is strong evidence that machining fluids used in auto plants are causing cancers and respiratory problems in workers.

The study concluded that auto workers don't die from cancer more often than Americans in general. But it said there are more deaths than normal from certain cancers, including those of the throat, pancreas, rectum and prostate.

In addition, workers who inhale machining fluids on the job have a higher rate of breathing problems and respiratory illnesses, the report said.

Though the report didn't prove a cause-and-effect relationship, it is the strongest evidence yet of a link between exposure to machining oils and cancer, particularly laryngeal cancer.

"Up until now, there was no strong evidence of cancer" connected to the oils, said Roger Wabeke, former supervisor of industrial hygiene for Ford Motor Co. "The workers should be concerned," said Wabeke, now at Wayne State University in Detroit.

General Motors and the UAW paid $2.2 million for the study. They are concerned enough that they have agreed to spend an additional $2.3 million for a series of follow-up studies during the next three years.

Since cancers and diseases can take several years to show up, GM and the UAW agreed with the Harvard team that much more information will be available with continued follow-up of exposed workers.

The study, which began in 1985, is the most comprehensive look yet at machining fluids and their relation to workers' health, according to Dr. Douglas VanBrocklin, GM's general director of occupational safety and health. The study, which VanBrocklin called "very extensive and very good," was initiated because several smaller studies showed increased rates of cancers among auto and other workers who work with machining fluids.

It also was the first such project

NADA to spend $1 million on 1992 election

CHARLES M. THOMAS
Staff Reporter

With so much at stake in the November election for the nation's 19,000 new-car dealers, the National Automobile Dealers Association's political action committee will contribute more than $1 million to its favorite candidates for Congress.

NADA hopes to pack Congress with new faces sympathetic to its positions on potent issues like international trade, luxury taxes and federally mandated family leaves.

Candidates who at the very least will listen to the association's opinions on taxes, corporate aver-

AUTOMOTIVE NEWS (ISSN 0005-1551) is published weekly except semiweekly the fourth week in May at 1400 Woodbridge, Detroit, MI 48207-3187. Second-class postage is paid at Detroit, MI and at additional mailing offices. Postmaster: Send address changes to AUTOMOTIVE NEWS, Circulation Department, 965 E. Jefferson, Detroit, MI 48207.

correction

A July 20 story on Page 1 incorrectly said General Motors had created its corporate audit staff on July 1. Actually, on that day the company formed a dealer audit section and made it part of the existing corporate audit staff.

Ford also is expected to continue offering extended free floorplanning to dealers on the chassis, which is why it isn't fully matching Chevrolet.

Both manufacturers already offer $1,300 consumer rebates on the vans in addition to the dealer cash. GMC Truck's version of the July 17-Sept. 24 dealer incentive on conversions pays $750 per unit until a dealer hits a quota and $1,500 per unit on all conversion van sales after that.

— Joseph Bohn

GM announces three recalls

DETROIT — General Motors is recalling 502,000 vehicles.

One recall covers about 250,000 1991 and 1992 model Chevrolet Caprice, Buick Roadmaster and Oldsmobile Custom Cruiser cars to replace a plastic-covered shoulder belt guide loop. The plastic may crack, letting a steel subplate cut the belt.

About 215,000 1990-1992 model Geo Storms are being recalled so dealers can install a reinforcing plate on the steering wheel hub. The hub could break in certain frontal crashes, reducing driver control and the protection of the steering system and driver-side airbag.

A third recall covers about 37,000 1991 and 1992 model Chevrolet Caprice police cars with steel wheels. Cracks may develop around the lug nut mounting circle. Wheels and lug nuts will be replaced.

Toledo OKs aid for Chrysler

TOLEDO, Ohio — Municipal leaders have approved $96 million in tax breaks for Chrysler Corp. to help the automaker move Dodge Dakota production here.

Chrysler plans to invest more than $84 million at its Toledo Jeep plant to prepare it for Dakota production. The company said the move will not necessarily mean new jobs but could save up to 1,130 jobs at the plant, which builds Jeep Cherokees and Wranglers. About 4,500 people work there. Chrysler announced the move two weeks ago. Besides tax abatements, the company asked for infrastructure improvements around the plant.

— The Associated Press

Cadillac offers 2nd Northstar

DETROIT — Cadillac will introduce a second version of its new Northstar 4.6-liter, overhead camshaft, 32-valve V-8 engine with lower horsepower and higher torque for improved fuel economy.

The second Northstar will debut as an option for a new 1993 Eldorado model called the Eldorado Sport Coupe. The standard engine on the Eldorado and Eldorado Sport Coupe will be the 4.9-liter pushrod V-8.

The new version of the Northstar has 270 horsepower and 300 pounds-feet of torque compared with 295 hp and 290 pounds-feet of torque for the full-power Northstar. The full-power Northstar is standard equipment on the 1993 Seville Touring Sedan, Eldorado Touring Coupe and Allante.

Infiniti drops top sales post

Infiniti Division of Nissan Motor Corp. in U.S.A. eliminated the position of national sales manager last week when Tom Eastwood left the post to become general manager for Nissan Division's Northwest region.

Eastwood had held the Infiniti job for nearly a year. He followed Earl Hesterberg, who left last August to become general manager of Nissan Division.

Sales managers who reported to Eastwood now report to Infiniti General Manager Bill Bruce.

Infiniti joins Nissan Division in dropping the position of national sales manager.

— Kristine Stiven Breese

Navistar to fix school buses

CHICAGO — Navistar International Transportation Corp. will recall school bus chassis built since Sept. 1, 1978, to fix a fuel system defect.

The company said that as few as 24,000 or as many as 185,000 vehicles in the United States could be affected.

The recall was prompted by a National Highway Transportation Safety Administration crash test of a Navistar bus chassis equipped with a 35-gallon fuel tank. During the test, fuel leakage exceeded allowable levels.

Navistar said it would notify customers next month of plans for fixing the defect. Customers with questions can call 1-800-448-7825.

LH road show set for suppliers

Chrysler Corp. will take its LH sedans on a two-month tour of 15 major suppliers in the Midwest and South beginning Aug. 11.

Suppliers will get to see the new sedans before many are available in showrooms.

Chrysler spokeswoman Kelly Lasecki said this is Chrysler's way of thanking the suppliers on whom it depends for 70 percent of each vehicle it produces.

— Gwendolyn Zonghetti

briefly

Nissan dollars help L.A. rise

Nissan Motor Corp. in U.S.A. has started a $5 million fund to support economic development in Los Angeles neighborhoods that rioted in April. The local Urban League was the first announced recipient, and its president, John Mack, said the new Nissan Foundation's "focus on long-term solutions is the approach necessary to ensure that everyone is included at the table of opportunity."

HAPPY BIRTHDAY . . . NOT — Oldsmobile P.R. guy Gus Buenz admits that special advertising commemorating the division's 95th anniversary is in the works. But it didn't run July 21, as a Chicago newspaper reported. Buenz said a dealer who tipped the paper had the month wrong. Olds celebrates its birthday Aug. 21.

AUTO HISTORY, NO. 415 — When Jim Perkins was a **Chevrolet** field rep in 1962, he called on a dealer named King to sell showroom banners and other promo stuff. The dealer signed up for every item during the first half of the presentation, then said, "It's getting close to lunch," and he signed for the rest without waiting for the pitch. "You ought to make this tougher for me," said Perkins. King answered: "Let me tell you something, son: 85 percent of everything Chevrolet's got in the way of programs and merchandise ain't worth a tinker's damn. But the other 15 percent has made me a multi-millionaire. And I'm not smart enough to know which 15 percent."

OFFICE ON WHEELS — When Michigan Gov. John Engler ran for office in 1990, he said he would travel the state in an **Oldsmobile,** not the jet helicopter favored by the incumbent. Engler won and kept his promise, but now he's ready to break it. The Guv accepted the keys to a 1992 **Ford** Econoline last week that had been modified into a mobile office complete with computer, telephone, desk and reclining armchair.

CORNY — Sioux Falls, S.D., is in the middle of a cornfield that runs three or four states wide, so maybe you knew that it was testing vegetable oil in its diesel trucks (for an 80 percent drop in hydrocarbon emissions) and Mayor Jack White was testing a car burning E85 (85 percent grain alcohol, 15 percent gasoline). Next: The motorcycle patrol is thinking about some E85 Harleys.

GASSY — So is Canada the propane capital? Earlier this summer, **Chrysler Canada Ltd.** signed a deal with the Propane Gas Association of Canada to develop a propane concept vehicle that could lead to a production pickup or minivan by January 1995.

ROSS GETS REAL WORK — Sure, Ross Roberts can sell Fords by the thousands. He's general manager of **Ford Division.** But can he sell them one at a time? Roberts wore a sales hat at Conyers Riverside Ford in Detroit for an all-star celebrity event that gives $500 to charity for each vehicle a VIP sells. Roberts helped close a deal on a 1993 Escort LX, but it wasn't delivered right away so "we haven't put a gold star by his name yet," dealer Nathan Conyers joked.

Roberts: waiting to get his gold

Chrysler cuts rental fleet sales for '93

MARY CONNELLY
Staff Reporter

Chrysler Corp. will reduce its sales to daily rental companies by 28 percent in the 1993 model year.

Theodor Cunningham, Chrysler's executive vice president of sales and marketing, said Chrysler plans to sell 150,000 daily rental units in the 1993 model year. Chrysler expects to sell 208,000 such vehicles in the 1992 model year and sold 256,000 in the 1991 model year, Cunningham said.

Chrysler is trying to reduce its sales of low-margin daily rental vehicles in favor of retail units, which bring higher gross profits to the company and its dealers.

Fleets account for about half the total sales of the Dodge Dynasty.

In addition, Chrysler expects to sell 95 percent of its new LH midsized sedans as retail units in the 1993 model year, said Edwin Brust, general product manager of Chrysler's large-car platform team.

In contrast, about 50 percent of Dodge Dynasty units are fleet sales, Brust said.

The LH cars are the Dodge Intrepid, Eagle Vision and Chrysler Concorde. Chrysler plans to build 180,000 LH cars in the 1993 model year.

Chrysler also is prohibiting the placing of stickers or promotional material on the LH sedans, identifying them as rental cars. Tom Stallkamp, Chrysler's vice president of procurement and supply and general manager of large-car operations, said such identification devalues the vehicle in the mind of the consumer.

Chrysler is releasing to daily rental fleets in two locations the first 1,000 LH units produced at its Bramalea, Ontario, assembly plant. Production began June 30.

Some 850 of those cars are being sent to daily rental fleets in Orlando, Fla., for quick customer feedback and high-mileage accumulation. The remaining 150 will be sent to fleets in Denver for high-altitude evaluation.

Chrysler engineers and technicians will be in Orlando and Denver for up to 30 days to monitor the cars' overall performance.

Eaton tells production team to find world's best

MARY CONNELLY
Staff Reporter

Chrysler Corp. is taking the team approach to the factory floor.

Chairman-designate Robert Eaton has appointed an eight-person production system team, charged with finding and figuring out the world's best production practices. Eaton wants a plan to implement improvements at Chrysler ready by year end.

Eaton: looking for the best

Formation of the production team was reported last week in the company's internal publication, *The Chrysler Times*.

The newsletter described Eaton as "a firm believer in benchmarking," the practice of seeking out and adopting the world's best practices and methods.

Eaton, who will succeed Lee Iacocca as Chrysler chairman on Jan. 1, said the team should recommend an "umbrella program" under which all the quality programs, cost and cultural change ideas can be grouped. He called the team "an important undertaking that will have a major impact on our future competitiveness."

"One of our most important goals is to be among the world's highest-quality and most efficient automotive companies," Eaton said. "We need to provide employees with the tools and management structure needed to accelerate progress on cultural change, quality improvement and greater cost efficiencies."

Members of the eight-person team are: Tom Breneiser and Jeffrey Chiapetta, manufacturing; Ken Francese, personnel, administration and development and employee relations; Jim Holden, sales and marketing; Tom Johnston, quality; Harry Lewis, management information systems; Craig Love, vehicle engineering; and Barry Price, procurement and supply.

The team's work will be reviewed by a steering committee of Eaton, Chrysler President Robert Lutz and the company's four executive vice presidents: Theodor Cunningham, sales and marketing; Thomas Denomme, Corporate Staff Group; Dennis Pawley, manufacturing; and Jerome York, chief financial officer.

Mercedes' Win/Win lease helped double the sales of 300-class cars in May and June.

Euro luxury at low cost

Lease deals help protect share

JIM HENRY
Staff Reporter

NEW YORK — European luxury cars are priced to move these days.

Mercedes will lease you a $50,000 300E for only $23,000 plus a down payment. Jaguar is leasing a $61,000 XJS coupe for only $36,000, with no down payment. BMW has offered leases as low as $33,000 on a $57,000 735iL.

It's costing them money, but after years of complaining about the Japanese buying market share, the Europeans are fighting fire with fire.

"It's very important for them to protect their market share now," said Susan Jacobs of Jacobs Automotive Inc., a consulting firm in Little Falls, N.J.

"They have got to protect their share of the current market. When the market goes up, presumably their sales will go up with the market, and they will make more money to offset what these leases are going to cost them," she said.

Short-term, cut-rate leases are the discount of choice.

For one thing, luxury-car owners are accustomed to the idea of leasing. Lease discounts seem less harmful to a tony image than an out-and-out customer rebate.

At the end of a lease the customer is bound to return to the seller.

"That's a major benefit for us," said Dennis Lassiter, marketing programs manager for Jaguar Cars Inc.

"The (lease) customer is going to come back to see us in two or three years, and we'll be there with our new products," he said. Lassiter said Jaguar's present SuperLease discount is "essentially free money" — interest-free, that is.

Michael Dale, president of Jaguar Cars Inc., said Jaguar forecast its lease business would be around 40 to 50 percent of total volume, but it's running more like 60 to 70 percent.

Leasing lowers monthly payments, since in effect the customer only has to cover the cost of depreciation for the lease term, rather than the entire cost of the car.

To build in a further discount, companies take a risk and set an optimistic resale value at the end of the lease.

Mercedes-Benz has a reputation for being synonymous with high resale value, but its Win/Win leases push the envelope, even for Mercedes.

"When Mercedes moves, everybody else follows. Their main problem is their price positioning is simply too high," Jacobs said. "They're spending what the market is directing they have to spend."

For example, the lease deal for the 300E assumes a residual value of $27,916. That's 56 percent of the suggested retail price of $49,850. But a recent *Automotive Lease Guide*, which tabulates residual values for financial institutions, dealers and leasing companies, pegs the 300E at 47 percent of MSRP after three years.

The difference — in effect, the Mercedes discount — is about $4,500.

Mercedes says with the Win/Win program its lease penetration has jumped from about 40 percent of total volume to around 60 percent. Win/Win began in April. In May and June, 300-class sales nearly doubled over the year-ago period to 5,457. If 60 percent of those were leased, with a $4,500 discount on each one, that's $14.7 million on the 300 class alone.

Cut-rate lease deals have helped boost sales of the Jaguar XJS coupe, top, and the BMW 735iL, above.

Mercedes-Benz Credit Corp. reported last week that its new business grew 40 percent, or more than $1.4 billion, for the first half of 1991, compared to the same six months last year. More than 75 percent of the addition was in leases.

Jaguar, which has a poorer reputation than Mercedes for resale value, is out on a longer limb. The leasing guide pegs a 4-year-old XJS coupe at 31 percent of suggested retail price. After four years, a SuperLease customer will have paid only about 60 percent of MSRP. If Jaguar has to make up the difference, that could be as much as $6,000 per car.

Dale, the Jaguar president, said Jaguar is confident residual values will improve because parent company Ford Motor Co. has improved build quality so much.

"We could've never supported the residuals" before Ford, he said. "The lease deal is a direct result of better quality. We're saying the marketplace as it stands is wrong with regard to where our residual values will be."

Trucks strong as Ford sales rise in mid-July

JIM HENRY
Staff Reporter

Ford Motor Co.'s sales of new cars and light trucks rose 10.7 percent in mid-July with trucks supplying most of the momentum. Ford truck deliveries jumped 18.8 percent, and cars climbed 4.5 percent.

There were eight days in the period this year vs. nine last year, so comparisons are based on the daily selling rate.

Ford was the only Big 3 maker to report mid-July sales. General Motors is on vacation and did not issue any numbers. Chrysler Corp. does not divulge 10-day results.

Other makes reporting full mid-July deliveries were Acura and Honda and Lexus and Toyota. Sales of U.S.-built cars and trucks were reported for Nissan, Mazda, Mitsubishi, Subaru and Isuzu.

Sales for Ford Motor Co. and the reporting Japanese makes rose 2.6 percent in mid-July on a daily-rate basis. Cars were down 0.8 percent, and trucks climbed 9.5 percent.

Automotive News usually estimates 10-day sales for Chrysler and for many imports, but this report is confined to those companies that announced their sales. The reporting makes represent about 40 percent of the market.

Toyota Motor Sales U.S.A. Inc. sold 26,589 Lexus cars and Toyota cars and trucks, down 11.7 percent from last year.

Honda and Acura sales by American Honda Motor Co. Inc. were down 8.1 percent.

Sales of Nissan's U.S.-built cars and trucks were down for the period, and Mazda, Mitsubishi and Subaru-Isuzu reported gains.

SERVICE

Illinois to inspect auto salvage yards

SPRINGFIELD, Ill. — The state will begin auditing salvage yards, repair and rebuilding shops and scrap processors, checking for stolen vehicles and parts.

The secretary of state's office will hire 35 civilian employees to conduct about 3,000 audits and vehicle and parts inspections. Auditors can inspect record books and auto yards, but they cannot make arrests.

There are an estimated 5,700 salvage yards and repair shops in the state.

The program is funded by the $1 annual fee insurance companies pay for each vehicle they insure in the state. Auditors will begin in the Chicago metropolitan area.

Toyota adds to service center

TORRANCE, Calif. — Toyota Motor Sales U.S.A. Inc. has added a body and paint repair area to its Service Development center.

The 17,438-square-foot addition is used for equipment evaluation and training instruction and development. Equipment includes a downdraft paint spraying booth, hydraulic frame straightening equipment, electronic measuring systems and a fully equipped paint mixing laboratory.

GM selling rebuilt steering pumps

DETROIT — General Motors' Service Parts Operations has started marketing remanufactured power steering pumps.

Coverage is provided for GM passenger cars from 1965 through the current model year. Light trucks from the 1961 model year are also covered.

The new product line also includes capsticks and reservoir and seal kits. The pumps carry the same 12-month warranty as new GM replacement parts.

Chrysler LH cars designed with eye on service issues

Early involvement prompts changes

ROGER ROWAND
Staff writer

When Chrysler Corp. takes the wraps off its LH models this fall it will have a great deal to talk about in the area of service.

"We are trying our hardest to get our feet on the floor in serviceability," said Ken Betz, manager of serviceability for large car platform.

Betz told of serviceability specialists getting in on the planning of the cars and following them along to production, working continuously with the post-sale environment in mind.

Betz said the LH serviceability tale is one of small victories, like the use of a better engine oil dipstick and getting alternator hold-down bolts moved so they're readily accessible to repair technicians.

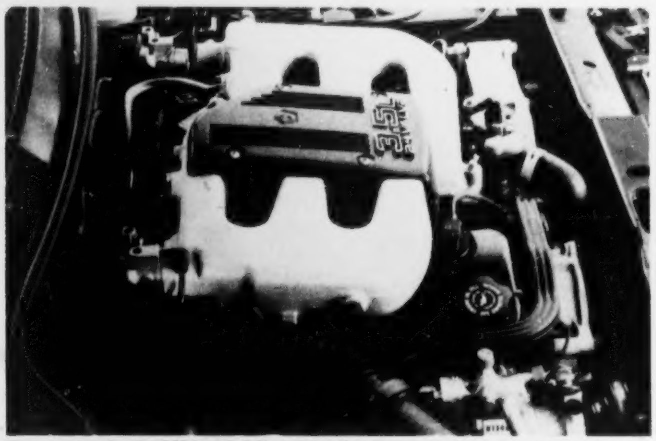
It's also a story of small defeats. Those included unsuccessful attempts to avoid the necessity of removing the instrument panel to do some of the heating, ventilation and air conditioning system service. Removing the instrument panel is necessary because air conditioning ducts are molded as part of the structure.

Occasionally, Betz, said, there were toss-ups and compromises.

One of those was the changed location of the engine coolant thermostat. The device was moved to a spot where it is more accessible than where engineers had put it originally. But, Betz said, the new location means coolant must be drained before the fuel rail can be replaced.

"There are things we are proud of. When we do our job no one seems to know it. But, when it goes the other way, the whole world seems to know it," Betz said.

There even are victories in the instrument panel debate.



Top engine in the LH is a 3.5-liter 24-valve V-6 with dual throttle bodies.

Betz noted that the car-wide panel was originally designed to be larger at the bottom than at the top, which meant technicians couldn't get it out of the car.

Pointing out that fact early in the development process got the problem fixed.

Other gains for serviceability behind the instrument panel were improvements in the quality of heater cores with the use of vacuum brazing during manufacturing, improved corrosion resistance and use of fewer fasteners.

The instrument cluster in the instrument panel is held in place by just two screws, one clip and some plastic push-ins for ease of removal and reinstallation.

The charge in the cars' air conditioning system is derived electronically instead of being observed through a sight glass. The level of charge is accurately calculated with readings from temperature and pressure sensors in the system.

The Concorde, Intrepid and Vision will be the first Chrysler cars to use chlorofluorocarbon-free 134a refrigerant instead of R-12, which damages the earth's ozone layer.

Dealers are required to buy a new refrigerant recovery system to service the air conditioning system. Chrysler is also introducing the refrigerant on the Jeep Grand Cherokee and its minivans for the 1993 model year.

The service group also fought over location of the LH's transmission dipstick. The outcome: "Not perfect, but a lot more accessible," Betz said.

When the LH cars are nearing the end of the assembly line at the Bramalea plant in Brampton, Ontario, the rear shocks are inserted through the backlight opening and the top retaining nuts are torqued all at one time by an automated tool.

The location allows added jounce travel for improved ride and handling. It's fine for the assembler in the factory but not so nifty for the service technician in a dealership because the bolts he has to reach are right under the package shelf and are close to rear shoulder belt locations. Removing and replacing the shock requires a special curved wrench.

But even there, service personnel won reduced torque on the nuts for easier removal. There is no need to go inside the car to service the shocks.

Service work up in June

DETROIT — New-car dealership service departments were busier in June than they were a year ago.

Parts and service business during the month totaled 108.7 percent of that reported in June 1991, according to the *Automotive News* Service Index.

For the first half of the year, parts and service business was 3.5 percent higher than in the first six months in 1991.

In June, all five categories tracked by the index posted gains. Both shop parts sales and sales of all parts and accessories rose 12 percent. Each of those categories was up at least 6 percent for the first half of 1992.

Repair orders written was the only category to decline in the first half, down a scant 0.1 percent from the same period in 1991.

Among dealerships reporting an increase for June, several cited better management practices and aggressive marketing as key factors.

Figures used in the Service Index are compiled from a cross-section of new-car dealerships.

SERVICE INDEX
108.7*

	June, '92 vs June, '91	Jan.-June, '92 vs Jan.-June, '91
Gross Profit on All Labor and P&A Sales	+ 3.6%	+ 1.6%
Repair Orders Written	+ 5.4%	– 0.1%
Total Labor Sales (Customer & Warranty)	+ 6.2%	+ 0.6%
Shop Parts Sales (Customer & Warranty)	+ 12.1%	+ 6.2%
Sales of All P&A...........	+ 12.0%	+ 6.0%

* Survey by Automotive News shows that dealers' service and parts business in June 1992 was 108.7 percent of business in June 1991. Service business in 1992 was 103.5 percent of business in the corresponding period in 1991.

GM adds exhaust program

DALE JEWETT
Service Editor

General Motors dealers are getting into the exhaust system repair business with the Goodwrench Exhaust Program.

The program was started in early June, said Richard Arntzen, general product manager for GM's Service Parts Operations.

Dealers who join the program get mufflers, resonators, pipes, accessories and service tools.

The primary target customers are owners of GM vehicles that are 3 to 7 years old, Arntzen said.

The program covers 1981 through 1990 GM passenger cars and light trucks. Many popular non-GM domestic and import vehicles for the same period are covered by the program.

Replacement mufflers are covered by a lifetime warranty to the original purchaser; exhaust pipes carry a 12-month warranty; labor is covered for 12 months or 12,000 miles.

The program includes advertising that is geared to the individual dealership "to let people know we're in the business," Arntzen said. But neither the ads nor the program are specifically keyed to challenge the independent and franchise exhaust repair shops.

"With the quality, a competitive warranty and a fair price we feel we are competitive enough," Arntzen said. "That's not to say we'll be the highest or lowest priced."

Dealers can get into the program for as little as $3,000, Arntzen said, or spend up to $40,000 if they want to stock a lot of inventory. Stocking racks and service tools are provided free.

The program was tested at GM dealerships in the Columbus, Ohio, area.

Arntzen said one thing learned from the test was not to have the stocking racks and parts arrive at a dealership at the same time because it cluttered the service area. Racks now arrive at a dealership a few days before the parts.

European sales off 4.2% in June

Weighed down by a 17.4 percent slide in Germany, European passenger-car sales in June fell 4.2 percent from a year earlier despite strong gains in Italy, France, Britain and Spain.

The June decline was the sixth consecutive month that sales in Germany, Europe's biggest market, have fallen below the frenzied pace of 1991. Analysts expect the downturn to quicken before the end of the year as high interest rates and economic slowdown further dampen consumer spending.

According to *Automotive News* estimates, sales in the 17-nation European market fell to 1.13 million units last month from 1.18 million a year earlier. But the overall decline masked strong gains in Italy, France, Britain and Spain. They are the four largest markets in Europe after Germany.

Sales in Italy jumped 17.1 percent from a year earlier to 226,700; France rose 7.7 percent to 141,100; Britain rose 4.4 percent to 102,500; and Spain was up 13.3 percent to 93,800.

For the first six months, sales were 7.36 million units, off 1.1 percent from a year earlier. Sales in Germany plunged 9.2 percent.

The drop in Germany dragged down the sales of three of the six major European makers in June. Two had barely measurable gains:

- Volkswagen AG sales surged 7.6 percent in the month to 211,700 units, on continuing strong demand for the Golf III. The company, Europe's biggest carmaker, posted a record market share of 18.8 percent in June.
- Fiat Auto S.p.A. sales slipped 2.1 percent to 142,900 units, yielding a 12.7 percent share of market.
- General Motors Europe slid 10.5 percent to 133,200, for an 11.8 percent share.
- Ford of Europe sales fell 9.8 percent to 127,500 units, for an 11.3 percent share.
- Peugeot SA posted a 1.5 percent gain to 126,200 units, yielding an 11.2 percent share.
- Renault SA sales rose an imperceptible 0.6 percent to 112,800, for a 10 percent share.

Among other European makers, BMW AG slipped 0.8 percent; Mercedes-Benz AG fell 16.7 percent; Rover Group fell 8 percent and AB Volvo was down 4 percent. Saab rose 8.2 percent.

Japanese makers raised their share a full point to 8.6 percent, despite a 16 percent sales drop. AN

Turnaround seen for ailing Britain

LONDON — Are sales in the United Kingdom — the sick man of the European car industry — finally ready to rebound?

After a 33-month string of consecutive year-on-year declines that was finally broken in May and June, many analysts are starting to think so.

"There's a lot of pent-up demand out there, and the trend is looking good," said Neil Marshall, chief economist of the Retail Motor Industry Federation, Britain's equivalent of the National Automobile Dealers Association. "I think August could be a record month."

British car sales slid 21 percent last year to 1.59 million units, and are down 4.1 percent for the first six months of 1992.

Based on the upticks in May and June, however, analysts say the market now appears ready to take off in August, traditionally the strongest month of the year for British car sales.

"The market should be up as much as 10 percent," said Garel Rhys, a professor at Cardiff University in Wales.

"This stimulation should carry through to September and October, and more than offset the weak first half. I think we're shaping up for a total market of 1.67 million units for the year."

Omaha and Little Rock remain good plant sites

LINDSAY CHAPPELL
Staff Reporter

Industrial site consultants who helped BMW AG choose South Carolina for a new car factory last month believe other new factories will locate in sites remote from the existing industry.

Two likely sites will be Omaha, Neb., which BMW considered as an alternative, and Little Rock, Ark., one of the consultants believes.

"Omaha didn't meet BMW's criteria for a site, but it will meet someone's," said James A. Schriner, vice president of PHH Fantus, an international site-search firm. "Little Rock has been considered by other companies, and it will be considered again."

Mazda Motor Co. considered Omaha before building a U.S. plant in Flat Rock, Mich., and a carmaker that Schriner declined to identify considered Little Rock before building elsewhere.

Schriner and Eb Weller, a Fantus director, helped BMW weed through 200 potential U.S. plant sites to select Greer, S.C., for a factory that will build up to 75,000 cars a year.

"The rule of thumb in the old days was that an auto plant must be of a certain size to be profitable," Weller said. "New technology is making it possible to consider smaller plants, and also plants that are farther away from traditional industry centers."

For the past decade, Japanese carmakers have built U.S. plants outside the Detroit-Great Lakes industry hub. Big 3 makers have long operated far-flung plants in places like California and Georgia, but in recent years have phased some out in favor of more Midwest production. The newest Big 3 factory, Chrysler's Jefferson North Assembly plant, opened this year in Detroit.

James M. Rubenstein, a geographer and author of a new book on auto plant locations, suggests that future sites will be determined based on their proximity to customers. He predicts that carmakers will increasingly put greenfield plants closer to their specific markets, with less regard for the proximity of suppliers, technical support or past plant locations.

That will mean more plants outside of the current industry center, he said.

"All cars have a different geographical market-center and it will be advantageous to produce where you can deliver the product quickly and cheaply," said Rubenstein, professor of geography at the University of Miami in Ohio, and author of "The Changing U.S. Auto Industry: A Geographical Analysis."

Half of all BMW's U.S. sales comes from the eastern part of the country, north, south and west of the Greer site. Saturn Corp. selected Spring Hill, Tenn., as a plant site in 1985 because it was central to consumers around the country, Rubenstein notes.

"The move south was already occurring before BMW came along," he said. "BMW has just taken it a little further." AN

Saturn buys $25 million paint shop

LINDSAY CHAPPELL
Staff Reporter

Saturn Corp. has spent $25 million to change paint-shop technology at its Spring Hill plant to comply with Tennessee and federal air emissions regulations.

The company determined in early 1991, less than a year after it began production, that it would not comply with limits on volatile organic compound emissions and began working with state officials to correct the problem.

Saturn has installed a new carbon absorption system for its paint shop that is expected to reduce emissions by one-third.

A company spokeswoman said the plant's overall emission levels have been in compliance with EPA guidelines, but it exceeded certain guidelines.

The carbon absorption system, which is also used at an older General Motors plant in Van Nuys, Calif., removes airborne solvents by passing paint shop exhaust through a filter of carbon traps.

The $25 million system is part of $48 million that Saturn has just invested in its two-year-old factory. Also included are $13 million in new tooling and facilities for a station wagon that enters production in August and $10 million to build new warehouse space.

The warehouse addition triples storage to 310,000 square feet.

The spokeswoman said additional space was necessary to house new parts for the wagon, and also to accommodate increased output. AN

Chrysler CAW wins tax refund

TORONTO — The ship finally came in for more than 8,000 Chrysler Corp. CAW workers who began receiving tax refunds last week averaging about $4,375 Canadian each.

The total is equivalent to about $29.3 million U.S.

In 1979 when Chrysler asked for government loan guarantees to avoid bankruptcy, it was required to obtain wage concessions from its workers and establish an Employee Stock Ownership Plan.

In 1985 the CAW and Chrysler terminated the stock program. Thousands of workers cashed in their shares in 1986 with the benefits taxed at a 30 percent rate.

The CAW began legal proceedings arguing the benefits should have been treated as capital gains. A Canadian court agreed. AN

CANCER

Machining fluids linked to disease

continued from PAGE 1

to be funded by the $4 million occupational health research fund that was established under the 1984 GM/UAW contract.

Results of the study were presented to top GM and UAW officials in April and are circulating within the company and the union. The results have not been made public.

WIDE-RANGING EFFECTS

Metalworking fluids have been a big concern within the industry for a long time because of their widespread use in components plants. "Whatever we do won't affect just General Motors," VanBrocklin said. "The whole machining fluid industry will follow this; that's why we want to do the right thing."

Machining fluids are used in a variety of common industrial metalworking operations to lubricate and cool the tool and the working surfaces.

The earliest machining fluids were straight oils, used for their excellent lubricating properties. Solubles and some synthetics, introduced in the 1940s, are well suited for grinding because of their cooling properties. Widespread use of synthetics began in the mid-1970s.

Until the middle of the century, most exposure was through the skin. With the introduction of high-speed machinery, substantial exposure to the fluids now occurs via inhalation of the mist.

The study said that more than 10 million workers in the United States are exposed to machining and grinding coolants and cutting oils.

GM said currently about 13,000 of the 45,000 workers at its plants where the oils are used come into direct contact with the fluids.

The Harvard study looked at the health records of nearly 50,000 past and present workers at three GM plants in Michigan — Saginaw Gear & Axle in Detroit, Hydra-Matic in Ypsilanti and Saginaw Steering Gear in Saginaw. The three plants were selected because of the widespread exposure of workers to machining fluids.

GUIDELINES OF STUDY

All hourly employees who had worked at least three years prior to 1985 were included in the study, except those who had worked in a large forge operation at Gear & Axle. Forge workers were exposed to other known toxic and cancer-causing agents that could have confused the results, researchers said.

Fewer than 3 percent of the workers were women, not enough to yield meaningful statistics. So the study was limited to exposed and unexposed men. The health records of unexposed workers were used for comparison.

The Harvard team looked at four types of machining fluids — straight mineral oils, soluble oil emulsions, synthetic fluid solutions and semi-synthetic fluids. The machining operations studied were boring/milling/turning, grinding and transfer machines during three time periods — pre-1970, 1970-'79 and 1980-'87.

Predominantly, straight and soluble oils are used at Gear & Axle, which produces gears and axles for rear-wheel-drive vehicles. All types of oils are used at Hydra-Matic, which makes transmissions. Straight oils are used predominantly at Saginaw Steering Gear.

In analyzing cancer death rates, researchers used only Gear & Axle and Hydra-Matic. They said there were too few deaths at Saginaw Steering to be significant.

Overall, workers at the plants had about the same cancer death rate as the U.S. population in general. That isn't especially good news: Groups of employed people often have death rates 10-20 percent below the national rate, since workers in general are not elderly or in poor health.

"The study does not give a clean bill of health," said Stuart Shalat, who worked with the Harvard team and is now an associate professor of epidemiology at Texas A&M University in College Station. "There was some suggestion that exposure (to machining fluids) is causing problems."

FINDINGS SUMMARIZED

In particular, what concerned the Harvard researchers were "glitches" in specific types of cancers, some nearly four times the general population rate.

For example, white males working with synthetic oils at Gear & Axle died of leukemia at 3.8 times the rate of the general population when a 20-year latency period from exposure was considered.

In one form of cancer — the larynx — death rates were higher than the national average at all the plants studied. The study found risks nearly twice the national average for laryngeal cancer among both black and white males, and that risk increased to more than three times the national average when follow-up was extended to 30 years.

"Overall, our findings suggest a positive association of rectal cancer with straight oil; stomach cancer with soluble oils and grinding; laryngeal cancer with straight and soluble oils; lung cancer with all exposure groupings; prostatic cancer with synthetic and soluble machining fluids and with grinding; brain cancer with soluble oils; leukemia with all exposure groupings, and pancreatic cancer with soluble oils," the report said.

The study also concluded that 20 to 30 percent of the exposed workers suffered breathing problems.

Shalat and VanBrocklin said GM has already been taking steps to reduce exposures to machining fluids.

In 1989, the GM/UAW Occupational Health Advisory Board, a six-member panel of university scientists, recommended that exposure levels not exceed 0.5 milligrams per cubic meter total particulate, even though government standards allow 5.0 milligrams. VanBrocklin said GM meets the 0.5 rate in about 80 percent of its plants.

MORE RESEARCH SLATED

GM currently has contractors evaluating the best methods to reduce exposure in its plants.

The 1990 contract between the UAW and the Big 3 automakers established a joint industrial hygiene committee that is studying air quality in the plants.

"We want to protect our workers," VanBrocklin said.

The new studies will focus on five areas: soluble oils and acute respiratory effects; all machining fluids and acute respiratory effects; respiratory effects connected with synthetic fluids; endotoxins used in machining fluids; and chemical components used in machining fluids.

Harvard and the universities of Massachusetts, Michigan, Iowa and Pittsburgh will collaborate on the studies.

"There's no question that metalworking fluids cause one of the biggest concerns in the plants today," said industrial hygienist Wabeke. For example, he noted that conditions in the fluids encourage growth of potentially dangerous bacteria.

Wabeke, who worked for Ford from 1972 to 1987, said, "The big companies are in pretty good shape, but there are always opportunities for improving conditions in the plants."

Shalat said the findings shouldn't be taken as a criticism of GM. "GM is just a massive company," he said. "Some plants are run immaculately, and others are not so clean, but some exposures are causing problems."

The study recommended that better control could be achieved by altering processes, changing coolants or identifying machinery where enclosures or exhaust systems are especially needed. The researchers also recommended reducing recirculation, increasing fresh-air circulation and providing a means to dehumidify workspace air during the winter.

SEX-RACE DISTRIBUTION BY PLANT

VW hits campaign trail with lease ad

ARLENA SAWYERS
Staff Reporter

Volkswagen United States is publicizing its lease program with an ad campaign draped in the red, white and blue of the presidential campaign.

The TV spots began during the telecast of the Democratic National Convention in mid-July.

Three 30-second spots were created. One features Passat; another highlights Jetta; and another pairs the two cars.

Dave Schembri, VW director of marketing, said VW chose the political theme because it wanted to capitalize on the excitement generated by the presidential election.

The spots open on a convention floor with a silhouette of crowds and posters in the background. Jetta is in the foreground of one spot.

The voiceover says: "There is nothing in our candidate's past that will prevent him from moving forward." At that point, the Jetta zooms off screen and the crowd explodes in celebration, throwing party hats, streamers and confetti.

The crowd chants "Jetta" as "Otto," the VW stickman, appears on a campaign button and then transforms into the VW logo.

The voiceover of another Jetta spot says: "And unlike many of his colleagues, our candidate would not be bought, he will be leased."

Schembri said consumer feedback indicated that some viewers who watched the convention telecast thought the ad was part of the convention proceedings.

"You cut through the clutter," he said. "It's very complimentary."

The print ads appear in the *Wall Street Journal* and *USA Today*.

The TV commercials also will air during telecasts of the Republican National Convention and the Olympics.

Output and sales rise 20% in Korea

OLES GADACZ
Staff Correspondent

SEOUL — Korean vehicle makers increased first-half output 21.6 percent over a strong period a year earlier.

They built 826,985 vehicles as local demand and exports stayed strong, the Korea Automobile Manufacturers Association reported last week.

Propped by growth at Hyundai Motor Co., the industry's dominant producer, domestic sales grew 20.4 percent, to 610,340 units, the association said. In the first half of 1991, the increase was 15.8 percent over the previous year.

Reflecting a slowdown in the key U.S. market, however, exports rose only 11.9 percent from a year earlier, to 189,247 units. In the first half of 1991, exports had grown 35 percent over the previous year, the association said.

Results from the country's three biggest vehicle makers:

- Hyundai Motor Co.'s sales in the home market rose 9.8 percent from a year earlier, to 274,354, despite an aging model lineup. Exports grew 6.5 percent, to 125,291 units, as shipments to new markets in Europe offset a decline of 35.1 percent, to 30,803, in U.S. exports.
- Kia Motors Corp., a Ford Motor Co. affiliate, said its domestic sales in the first six months jumped 16.1 percent from a year earlier, to 195,161. Exports rose 28.2 percent, to 42,149 units, although shipments to the United States slid 39.4 percent, to 11,576.
- Daewoo Motor Corp., which is 50 percent owned by General Motors, said home-market sales rose 6 percent from a year earlier, to 66,264. Exports rose 9.8 percent, to 17,717 units, but U.S. shipments of the Pontiac LeMans plunged 79.1 percent from a year earlier, to 2,306.

GM is moving to end its role in Daewoo.

ISUZU

GM unlikely to buy more trucks

continued from PAGE 3

truck sales to GM is that Isuzu's joint-venture truck plant in the United States, Subaru-Isuzu Automotive in Lafayette, Ind., is not unionized. Any attempt to source trucks from there would almost certainly be blocked by the UAW.

Another avenue — exporting built-up trucks from Japan — would be prohibitively expensive, Seki said.

"We have to consider the 25 percent (U.S.) duty on built-up trucks if we export, and also the exchange rate," Seki said.

In the meantime, he said, the two are discussing the potential for supplying GM with Isuzu engines. Isuzu would like to replace a GM engine now used in the Rodeo with its own double-overhead-cam V-6 engine used in the Big Horn.

Seki and Sullivan are now overseeing a top-to-bottom cost-slashing plan throughout the company, which posted a consolidated pretax loss of about $415 million for the fiscal year that ended last October.

The goal is to cut the deficit in half in the current fiscal year and return to profitability in the year beginning in November.

The company plans to cut its temporary work force 40 percent by 1993 and is reducing capital investment from about $622 million last year to $545 million. But it will maintain r&d expenditures at the current level of about $480 million.

Seki would not give specifics of the cost-savings target, but said the goal for the current fiscal year ending this October is to cut costs by 15 percent and increase productivity by 13 percent.

Although analysts consider GM's support to be vital to Isuzu's near-term survival, Seki said he took a long-term view toward his relationship with GM.

"Mr. Sullivan's joining us will help us tremendously in making a better appeal to General Motors," Seki said. "But having him on board does not have any immediate effect in real terms."

Hummer maker picks N.M. ad group

SOUTH BEND, Ind. — AM General, maker of the High-Mobility Multipurpose Wheeled Vehicle, or Hummer, awarded its advertising account to The Competitive Edge in Albuquerque, N.M.

AM General is a division of LTV Missiles and Electronics Group. Hummer was created originally for military use and attracted attention during the Persian Gulf war last year.

Civilian versions of the all-wheel-drive vehicle are to go on sale in October.

Lee Galles, president of The Competitive Edge, said his agency plans to plow "some brand-new ground with a brand-new product. . . It will be a revolutionary experience with a revolutionary vehicle."

Galles said the launch campaign will include network and cable TV and national print ads.

Hummer is built at AM General's plant in Mishawaka, Ind.

JAPANESE LUXURY BRANDS

Sales per dealer based on 1992 projections except for Amati, which is based on 1995-96 expectations.

	Number of dealers Today	Number of dealers At start-up	Number of dealers Ideal	1992 Sales	Sales/dealer (month)
Acura	296	60	300	128,000	36
Lexus	159	73	200	90,500	47
Infiniti	112	52	160	45,000	33
Amati	41	75	130	0	30

AMATI
No dealer palaces planned for U.S.

continued from PAGE 1

more money on their facilities, executives at Amati sent the East Coast dealer back to the drawing board. They suggested he retrofit an existing facility and dual Amati service with one of his other lines, cutting his capital investment by more than $1 million.

"It might be nice to have those big Taj Mahals that some dealers have, but we just don't need it," said Frank Beniche, dealer development manager for Amati Division of Mazda Motor of America Inc. "We don't want to take the risk, and we don't want the dealer to take the risk that kind of facility would represent. And we just don't need a building that big."

Amati's 120 to 130 U.S. dealers are expected to sell 25 to 35 cars a month when the network is up and running. Even when it's fully mature, Amati's volume will not top 50,000 units, said Mazda Motor Corp. President Yoshihiro Wada.

NOT TOO OPTIMISTIC

"We are not too optimistic about development of the U.S. market in the future as a whole," Wada said. "We consider this Amati a challenge for Mazda, so we'd rather go for a steady and sound growth."

Amati cars will be built at a new, highly automated $478 million plant in Japan with a capacity of about 160,000 units of as many as 12 models. Besides the units going to the United States, the plant will make cars for Europe, Australia, Hong Kong and Japan.

The go-slow strategy befits Wada, a finance man who became president last December. Before joining Mazda in 1983, Wada spent 28 years with Sumitomo Bank Ltd. Mazda has had a long relationship with Sumitomo, and the financial giant still holds a lot of sway at Mazda.

From its announcement last August, Amati has stressed that dealer profitability will be one of its highest priorities. Wada's comments suggest that the message comes straight from the top.

"Our major attention is for dealers to be able to do this as a business," Wada said. "We are trying to make a setup where there's not a lot of investment for dealers."

In that regard, Wada said Mazda will "not follow the same methods as Nissan, Toyota or Honda" in setting up its luxury channel.

Amati calculates that the average dealer investment will be $700,000, considerably less than the estimated $2 million to $5 million many Lexus and Infiniti dealers spent.

Most of the savings will come from allowing dealers to dual their service shop or locate it on premises separate from the showroom. Most Acura, Lexus and Infiniti dealerships are single-line sales and service outlets.

More savings come from retrofitting an existing building rather than starting from scratch. While Acura, Lexus and Infiniti were reluctant early on to let their dealers use retrofit facilities, Amati estimates that 15 to 20 percent of its initial dealers will have retrofits, and that percentage will likely increase as Amati rolls out to smaller markets.

MODEST NETWORK

Key to Amati's low volume expectations is the modest dealer network it plans. Amati has signed 41 dealers, and it expects to launch with about 75 in 60 markets.

While 75 would be more dealers than Acura, Lexus or Infiniti had at introduction, Amati would slow down substantially after that. Wada said that in its first three years, Amati will add only 45 to 55 dealers.

Lexus, on the other hand, grew from 73 at launch in 1989 to 159 dealers today and plans to expand to 200. After almost three years, Infiniti has 112 dealers and hopes to add 40 to 50. Acura grew in 6½ years to almost 300 dealers, where it would like to remain.

Amati says keeping dealer numbers low is key to keeping dealer profits high. The thinking is that fewer dealers mean a bigger sales territory and higher volume for each dealer.

"We're really conscious about what a market can support in terms of sales and dealers," said Amati spokesman Jack Nerad. "We'll be as careful as we can be, and we'll err on the side of too few, rather than too many."

Nerad said Amati "will always have fewer dealers than Lexus" in each market where they compete.

Wada's projection that Amati will grow to about 50,000 units annually means the dealers would average 400 units a year, which would be in line with Infiniti at this year's pace.

Based on sales for the first half, Acura is on course to sell 128,000 cars this year; Lexus could sell 90,000; and Infiniti 45,000.

THE PRODUCTS

While Wada said it is too early to discuss how Amati will distinguish itself, he is confident the cars will stand out.

"(Mazda has) introduced a number of products, all of which are highly acclaimed in the market. So we're quite confident about producing quality cars that are well accepted," he said.

Regarding product, Amati has said only that it will introduce an entry-level and flagship sedan in 1994. The entry-level sedan will go on sale in Japan next spring.

The flagship will likely be a large, rear-wheel-drive, V-12 model. Some have suggested "Jaguar-esque" styling. The entry-level car is expected to be a stretched version of the Eunos 500/Xedos 6 that is currently being built at the new plant in Hofu City, Japan. The car will be front-wheel drive and likely carry a 3.0-liter, 24-valve, V-6, although some are suggesting it will have a V-8.

Amati will probably add another model by the fall of 1995. ■

Honda poised to quit F1; decision expected by Sept.

MARY ANN MASKERY
Staff Reporter

TOKYO — In a move that seems to underscore its declining sales and worsening profit picture, Honda Motor Co. confirmed last week that it is "seriously considering" withdrawing from Formula One racing after this year.

President Nobuhiko Kawamoto, who had hinted at the possibility for several years while still executive vice president, said he will make a decision by September.

Analysts said the decision is overdue.

"It's about time to pull out," said Koji Endo, industry analyst for S.G. Warburg Securities in Tokyo.

"The company is now cutting costs and wants to save money as much as possible. But the real reason for quitting is that it has achieved all of its targets."

Honda's fearsome reputation of 66 wins in the top global circuit since 1984 has fostered an image as a youth-centered carmaker, particularly in Europe and Japan.

It also has been a magnet for attracting some of Japan's best young engineers, many of whom — like Kawamoto himself — have gone on to the company's uppermost ranks.

Formula One research also provided spinoffs for Honda's production lineup, particularly in engine research. Racing technical developments led to Honda's new computer-controlled VTEC engine and four-valve engine technology.

Honda insisted last week that its decision will not be dictated by flagging sales or earnings. The company said it spends "less than" $80 million a year on Formula One, although outsiders estimate the cost to be more than double that.

Honda spokesman Shin Tanaka said the company's 100 engineers allotted to the program might better be used in environmental research.

Honda withdrew from Formula One once before, from 1967 to 1984. It used the respite to develop its CVCC engine, which set new industry benchmarks for cleanliness and fuel efficiency.

Analysts say the company has already gotten as much benefit as it can out of the program. After leading Formula One racing for the better part of eight years and winning 15 out of 16 races in 1988, the company has claimed only two wins this season out of nine.

"They should have retreated from F1 last year," said Noriyuki Matsushima, senior analysts at Nikko Research Center.

"That way they could have shown a seriousness in their restructuring efforts, both inside and outside the company. They should quit, prepare a better engine, and come back." ■

HONDA
U.S. Accord output to be cut

continued from PAGE 1

included a non-production day on July 6 and scheduled non-production hours on each of the three auto production lines at its two Ohio plants. Non-production days are scheduled at Marysville on Nov. 6 and at both plants on March 31. After the adjustments are made, Marysville line No. 1 will build 750 cars per day, Marysville line No. 2, 550 per day, and East Liberty line No. 3, 470 per day.

Production at the Anna, Ohio, engine plant also will be affected. Fewer Accord engines will be built, while production of Civic engines will increase by 170 units per day, the letter said. Accord production at East Liberty will end after the 1992 model year run, leaving the plant to build the Civic.

The actions come as Honda's facade of seeming invincibility in the United States is beginning to show stress lines. Although it still possesses the best-selling car in the country with the Accord, Honda's first-half sales were off 4.5 percent in an overall market that was up 5.1 percent. And market share slipped a half point, to 7.4 percent, while inventories of unsold cars rose to 57 days on July 1 from 40 days a year earlier, according to *Automotive News* estimates.

Analysts said Honda's production adjustment reflects fundamental changes underway in the American marketplace.

"The domestic manufacturers are taking share away from foreign manufacturers as customers realize they have a price-value advantage and have caught up in quality," said Ronald Glantz, San Francisco-based securities analyst for Dean Witter Reynolds.

"Honda, in particular, has suffered because its product quality had been able to justify a premium price, but it's fallen back into the pack."

Honda's nemesis increasingly has become the Ford Taurus, which has made inroads into Accord's sales lead this year. Taurus outsold Accord in March and May. But Accord led Taurus by a narrow 3,879 units in June and by 10,473 units for the six months.

The Civic was the ninth best-selling car in June, but Saturn was only slightly more than 100 units behind — representing just a few hours worth of sales.

In their letter to suppliers, Imai and Nelson stressed that the reductions will not result in layoffs of Honda workers, or "associates" as they are called.

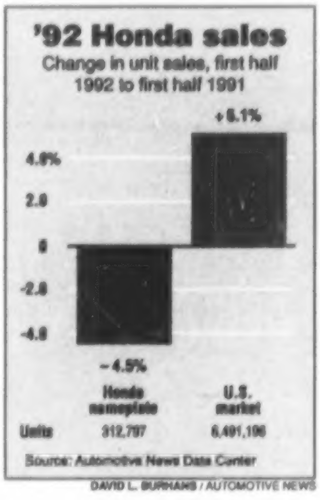
They said the company's underlying philosophy has not changed: To keep production as stable as possible so that quality and cost competitiveness are not affected.

But much of the letter is devoted to Honda's slipping levels of quality relative to its competitors.

"Throughout our history together, (Honda) associates and suppliers have concentrated on improving our quality and cost competitiveness in order to produce the best quality products for our customers," the letter said. "We must focus on improving our efficiency and competitive strength now more than ever."

'92 Honda sales

Change in unit sales, first half 1992 to first half 1991



Source: Automotive News Data Center

DAVID L. BURHANS / AUTOMOTIVE NEWS

The letter said Honda will be investing in more training for assembly line workers during its fiscal third quarter, and will involve more workers earlier in new model development to help reduce cost and raise quality.

Suppliers were urged to step up their quality and cost efforts as well. In September, the letter says, Honda will be building the cars that will be surveyed in the 1993 J.D. Power and Associates Initial Quality Survey, and special attention should be given to recover ground lost to competitors in 1992.

> "Although we made quality improvements in the 1992 J.D. Power Initial Quality Survey, our competitors made bigger gains. We must do better."
>
> **SATOSHI IMAI**
> HONDA

Honda overall placed fourth on the 1992 Power survey, moving up two places when Acura and Mercedes dropped out of the top five. Honda's score improved about 5 percent from 111 problems per 100 cars to 105 problems per 100 cars.

Meanwhile, the industry average improved 11 percent from 141 problems per 100 cars to 125 problems per 100 cars. And one of Honda's most successful rivals, Saturn Corp., improved its IQS score 28 percent, from 151 problems per 100 cars in 1991 to 109 problems per 100 cars in 1992. That moved Saturn into sixth place overall.

Dave Conant, president of the Honda dealer council and general manager of Norm Reeves Honda Superstore in Cerritos, Calif., said Honda is using good judgement by cutting production.

"I think that to their credit they're paying attention to the market," he said.

"Honda's never had to be so concerned with inventory in the past, it was just a matter of how many they could build. For Honda and most Honda dealers, this is a new experience. But I still say this is absolutely the best franchise out there." ■

BMW has expansion plans for S.C. plant

PETER BROWN
Editor

BMW AG hopes to expand its proposed South Carolina assembly plant by the end of the decade to reach its planned capacity of 60,000 to 70,000 cars a year.

The second phase will cost $175 million and will nearly double the size of the plant. The $300 million first phase will enclose 1.9 million square feet. BMW officials say production will begin in 1995.

Timing of phase two "is based on how well we are doing with our new plant" in Greer, S.C., said Carl Flesher, BMW's vice president for public relations for the South Carolina project.

BMW has not disclosed what car it will build in South Carolina, but last week officials did comment on several aspects of the project:

- While BMW plans to keep the 400-person headquarters of its U.S. sales arm in Woodcliff Lake, N.J., it intends eventually to move some operations from there to South Carolina.

"Take purchasing or engineering: They're definitely functions which we have to combine, and which are better located there than here," said Karl Gerlinger, president of BMW of North America. He said the company hasn't even begun to assess how many jobs might be shifted.

- An American with experience in the U.S. auto industry has been chosen to manage the Spartanburg County factory. Flesher said the manager will be announced soon.
- BMW will resist efforts to unionize the plant, BMW Chairman Eberhard von Kuenheim said in an interview with American journalists in Munich. "We don't need an outside, third party between management and our employees. We think a third party would only disturb these relations," von Kuenheim said.

He said workers will receive relatively high wages and benefits for the area.

- BMW will use a building in Spartanburg for temporary headquarters.
- The first 80 to 100 production employees will be hired early next year and will spend three to six months in Germany learning the BMW system. The employees will return to train others and become the supervisory team at the plant.
- About 50 Germans will establish permanent residence in the Greenville-Spartanburg area.
- In 1995 and 1996, car production will rise from 50 cars a day to 300 cars a day.

The Associated Press contributed to this report.

Nissan pays $250-$2,000

Nissan Motor Corp. in U.S.A. is paying rebates of $250 to $2,000 to dealers for sales of 1992 models. The program continues until the end of September.

On cars, **Nissan** is paying dealers $250 on the Maxima SE; $800 on the Sentra two-door; $950 on other Sentras; $1,000 on the Maxima GXE; $1,000 on all 240SX models except the convertible; and $2,000 on Stanzas.

The importer also is paying dealers $1,750 on pickup trucks. The Pathfinder sport-utility does not carry a rebate.

— Charles E. Ramirez

Inspections will save money, EPA says

The Associated Press

The new nationwide program to take vehicle emissions inspections out of the local service station and into centralized, state-run test centers won't result in long lines, an EPA inspection official says.

He says it's also likely to save car owners some money as well.

Studies have shown that centralized inspection sites charge lower prices and move cars through faster than smaller shops, according to the EPA.

"There's a lot of mythology about the convenience of a decentralized program. But the truth is, dropping in for an emissions test at the local service station is a myth," said Gene Tierney, inspection and maintenance chief at EPA's Office of Mobile Sources in Ann Arbor, Mich.

The EPA has issued new rules requiring the centralized programs. They are likely to put many smaller, independent shops out of the test business in the 29 states that currently have decentralized inspection programs. But the new regulations also prohibit test centers from doing repairs. That work will presumably go to the shops that no longer do testing.

Fourteen states already have centralized programs, and seven have mixed programs.

"In a centralized system, for the 85 percent of motor vehicles that passed their initial test, it's much more convenient," Tierney told *The Denver Post*. "Those owners may have to drive a little farther, but they're in and out in 15 minutes."

A 1991 Riter Research survey found the average waiting time in contract-run, centralized programs is 22 minutes, compared with 90 minutes in decentralized programs.

The average decentralized inspection cost is $17.70 per vehicle, compared with $7.16 in a government-run centralized program and $8.47 in a contractor-run centralized program, EPA said.

EPA officials say decentralized inspections cost more because quality control and training in a dispersed system cost more.

Another plus, according to the EPA, is that centralized programs are 20 to 40 percent more effective in catching cars that violate air pollution standards. The agency bases its conclusion on undercover audits in which agents pose as motorists with cars rigged to fail.

"In decentralized programs, about 50 percent of the time the stations pass you when they should fail you," Tierney said. "In centralized programs, that occurs only about 2 percent of the time."

EPA attributes the discrepancy to a lack of mechanic training, failure to follow procedures and deliberate falsification.

Saturn wins lawsuit over use of name

GWENDOLYN ZONGHETTI
Special Correspondent

DETROIT — Saturn Corp. is finally free of a 6-year-old lawsuit challenging its right to the Saturn name.

The U.S. District Court for the Eastern District of Michigan upheld a 1988 dismissal of a suit brought by Saturn Tire and Rubber, maker of specialty tires for tractors.

The suit, filed in 1986, charged that Saturn Tire and Rubber had first rights to the Saturn logo and that Saturn Corp. had no right to assemble cars bearing the name.

In 1988, the case was dismissed when federal Judge Robert DeMascio ruled that Saturn Corp. had not yet produced a single automobile.

Just prior to the start of Saturn automobile production, Saturn Tire and Rubber said it would try to halt production of the car.

Earlier this month, DeMascio refused to overturn the 1988 dismissal because the tiremaker has not sold any products bearing the Saturn name since 1983.

"Most troublesome to me was the realization that GM was being held for ransom," said General Motors attorney Ken Enborg.

"Their company was going out of business with no help from us. They thought they would be able to get millions out of us. This took six years and a lot of money in legal expenses to resolve," Enborg said.

Saturn Tire and Rubber declined to comment on the case.

Judge changes mind to settle Porsche suit

A federal judge in Idaho has vacated his own ruling of two years ago so a tentative settlement between a plaintiff and Porsche AG can become final.

The case was sent back from the U.S. Court of Appeals for the 9th Circuit.

In October 1990, Judge Marion J. Callister said that Craig Neilsen could not sue Porsche over an allegedly defective seat back because the 1966 motor vehicle safety law pre-empted any state regulation unless it was identical.

He noted that the car complied with federal Safety Standard 207.

Nielsen had argued the seat back should have been stronger than the standard because the Porsche is a rear-engine vehicle.

He appealed, and the Trial Lawyers for Public Justice, the Center for Auto Safety and Motor Voters filed a friend-of-the-court brief.

They pointed to the exception made in the law for suits brought under common law.

Last March, Callister told the federal appellate court he would vacate his earlier ruling for Porsche if the case were remanded.

Wrangler rolls at Toledo

GWENDOLYN ZONGHETTI
Special Correspondent

Chrysler Corp. began production of the 1993 Jeep Wrangler last week at the revamped Toledo, Ohio, facility. The Wrangler was previously produced at the Brampton, Ontario, plant.

With General Motors on vacation last week, car and truck production plunged in the United States and Canada.

U.S. car production was estimated at 66,049, down 39.2 percent from the prior week and 16.8 percent below last year.

Year-to-date car assembly in the United States is 3,237,970, down 5.3 percent from this point in 1991.

Canadian auto production last week was scheduled at 4,486, dropping 65.9 percent from the prior week and 63.0 percent from the year-ago week.

So far in 1992, Canada has built 592,287 cars, down 4.4 percent from 1991.

Truck production in the United States last week was scheduled at 43,794 units, down 36.6 percent from the prior week and 26.8 percent from the corresponding week last year.

Year-to-date, U.S. truck production exceeds 1991 by 25.4 percent.

Last week's truck production in Canada was 4,750, down 27.8 percent from the prior week and up 8.2 percent from the year-ago week.

This year, 578,602 trucks have been assembled in Canada, up 25.2 percent from last year.

Last week's estimated daily build rate of cars and trucks in the United States and Canada was 23,816, down 39.7 percent from the prior week and 23.6 percent from the year-ago week.

Last week's estimated vehicle build in the United States was shared as follows: Ford Motor Co., 56.8 percent; Honda of America Manufacturing Inc., 8.7 percent; Chrysler Corp., 6.8 percent; New United Motor Manufacturing Inc., 5.4 percent; Nissan Motor Manufacturing Corp. U.S.A., 5.3 percent; Auto Alliance International Inc., 4.6 percent; Toyota Motor Manufacturing (U.S.A.), 4.5 percent; Subaru-Isuzu Automotive Inc., 2.5 percent; Diamond-Star Motors Corp.; 2.0 percent; Miscellaneous, 1.7 percent; Navistar International Corp., 1.4 percent; and AM General, 0.3 percent;

Ford Motor Co. slated daily overtime at three car plants and three truck plants last week.

The car plants were: Wayne, Mich.; Atlanta and Chicago. The truck plants were: Michigan Truck (Wayne, Mich.); Louisville, Ky.; and St. Louis.

The Kansas City, Mo., car and truck plant also worked daily overtime.

Ford's St. Thomas, Ontario, plant worked daily overtime last Monday.

The facility assembles the Ford Crown Victoria and the Mercury Grand Marquis. ■

Mazda prices up $422 for '93

IRVINE, Calif. — Mazda Motor of America last week became the first of the Japanese makers to price its full line of 1993 vehicles in the United States.

The company announced an average increase of $422, or 2.9 percent, on cars. Truck prices were not changed.

The car price hike follows an increase of $732, or 5.1 percent, last spring. That boost included the pricing of its new 1993 MX-6, RX-7 and 626 lines. The 1993 prices of those three lines will go up another $280 to $750 Aug. 1.

The 1993 Mazda Miata convertible will be $15,300, an increase of $500.

MPV minivans have been increased $265 to $340. They went up $625 to $675 last spring.

Isuzu delays Gemini/Storm

TOKYO — Isuzu Motors Ltd., General Motors' Japanese affiliate, acknowledged last week that it has "postponed" development of the next-generation Gemini subcompact, sold in America as the Geo Storm. But the company denied that it is getting out of the car business.

Isuzu produced 130,447 passenger cars last year, including 89,000 for GM, but the company is known

New president at Toyota gets plenty of help

MARY ANN MASKERY

Staff Reporter

TOKYO — Toyota Motor Corp. President Shoichiro Toyoda last week annointed his younger brother Tatsuro to succeed him in September, but set up a new management structure that keeps the new chief executive on an exceedingly short leash.

The succession — in all likelihood the last time that a member of the founding family will head the world's third largest automaker — had been widely expected. But many observers voiced surprise at how little management control was ceded to the president-designate.

Under the plan, the 63-year-old Tatsuro will be surrounded by a newly created palace guard consisting of his brother, who moves up to chairman; his 79-year-old cousin, Eiji, who becomes honorary chairman; a new vice chairman, Masami Iwaskai; and five new ex-

VW locks out Mexico workers

Request made to disband union at Golf-Jetta plant

ARLENA SAWYERS

Staff Reporter

In a move that has the potential to derail Volkswagen AG's recovery in the U.S. market, the German carmaker last week shut out 14,000 workers at its plant in Puebla, Mexico, and petitioned the government to disband the union.

The plant is the sole source of the new generation Golf and Jetta for the American market, two cars that analysts say are essential to turning around the company's fortunes in the United States.

VW's U.S. sales fell 29 percent last year from a year earlier and are off 21.7 percent for the first six months of 1992, to 40,444 units.

Sales of the Jetta, the company's top-seller in the United States, are down 16 percent in the first half to 17,004 units.

A Volkswagen of America Inc. spokeswoman, Maria Leonhauser, said last week the Puebla plant was closed because an internal dispute within the workers' union had created work stoppages on July 23, 24 and 27. "Some workers tried to enter the plant, but were blocked by a small group of individuals," she said. "There was some intimidation going on."

Volkswagen AG's only plant in North America has a history of violent labor problems.

In recent years, workers have been shot, teargassed and even kidnapped from the line as rival union factions have vied for control of the sprawling complex.

Production at the plant has been halted since July 21.

The Mexican Federal Arbitration and Conciliation Council will hold a hearing Aug. 7 to

Toyota's new T100 pickup will initially be available with only a 3.0-liter V-6 engine.

Toyota rolls out big truck

'93 fits between Dakota and F-150

KRISTINE STIVEN BREESE

Staff Reporter

LOS ANGELES — Although it may not be the exact vehicle they asked for, Toyota Motor Corp.'s American executives finally have their large pickup truck.

After months of often-heated debate between Toyota Motor Sales U.S.A. and Toyota Motor Corp. in Japan, Toyota's U.S. executives began showing the all-new pickup truck to the press last week in Oregon and announced an on-sale date of Nov. 13.

Toyota executives project first-year sales of 50,000 to 60,000 units.

Despite the rollout and formal introduction date, parent-company officials in Japan still refused Friday to acknowledge that the controversial pickup truck exists or that Toyota has any plans to build one.

Toyota officials in America said they would not comment on details about the truck until Nov. 10.

The truck has been viewed as a political hot potato by Toyota officials in Japan because it will compete head-on in the last market segment owned by the Big 3, the full-sized pickup. The Ford F-series and Chevrolet's C/K pickups are the best-selling vehicles in America. Together with trucks from Dodge and GMC, the segment is about 1 million all-American units annually.

Called the T100, Toyota's new truck is smaller than the full-sized pickups and larger than the mid-sized Dodge Dakota. Toyota labels the truck an "intermediate."

Toyota dealers have wanted a truck bigger than their compact pickup so they could move customers up.

In exterior and interior dimensions, the T100 probably matches their wish list fairly closely. Three people can sit on bench seats, and the bed can carry a 4-by-8 sheet of building material between the wheel wells.

But Toyota made one major concession: There's no V-8 engine. The Big 3 trucks have V-8 options.

Toyota's new truck will enter the market this year with the same V-6 that is optional in its compact truck.

"It's very clear that this truck doesn't fulfill all the requirements that the Americans had about what they wanted it to be," said an auto analyst who has seen the truck. "There are some compromises. The engine is one of them."

The T100 will be offered in two-wheel-drive and four-wheel-drive versions and is about four inches shorter, narrower and lower than the Ford F-150, the leader in the full-sized pickup segment. Conversely, it is about six inches longer and wider than the Dodge Dakota, the only mid-sized truck

Suppliers buzz over 100 days of Lopez

AL FLEMING

Industry Editor

The man who won't be there — J. Ignacio Lopez — is bound to be the hottest topic of conversation among auto suppliers in Traverse City, Mich., this week.

Suppliers are buzzing over what many consider the 100 days of terror as they gather for the University of Michigan's Management Briefing Seminars.

Since becoming GM's vice president of worldwide purchasing three months ago, Lopez has been the most cussed and discussed Big 3 auto executive, and maybe the most controversial Detroit automotive figure since John Z. DeLorean.

The cussing comes over Lopez's unorthodox tactics, particularly his command that supplier contracts with GM be reopened and possibly renegotiated at bargain-basement prices.

Although many suppliers complain, none has yet confronted GM. Suppliers complain anonymously about broken contracts, but none has sued.

Some suppliers embrace Lopez as a savvy industrialist and fresh thinker, but more believe he is naive about the U.S. auto business and economically vicious. They say his tactics contradict GM's stated intention to cultivate harmony, teamwork and partnership with suppliers.

Other than an introductory meeting with chief executives of GM's top supplier companies in June, Lopez has shunned the pub-

corrections

- A July 20 story on Page 16 about Volkswagen of America misquoted spokesman Larry Nutson. His comment should have read: "We're basically out of the van business right now." The story also misidentified VW's new Eurovan.
- Passenger-side airbags will be standard equipment on all 1993 Mercury Sable models and will be included in the base price. Based on information provided by Ford Motor Co., *Automotive News* incorrectly reported in a July 20 story on Page 3 that passenger side airbags are optional on the 1993 Sable. Ford Division last week said the passenger-side bag remains optional on the 1993 Taurus.
- The July 27 editorial incorrectly reported the site of this month's Republican National Convention. It will be held in Houston.

A Ferrari for America

This spy photo shows a lightly disguised prototype of the new Ferrari 512 coupe, which will wear the America badge. The Pininfarina-designed replacement for the Ferrari 412 is expected to debut this fall at the Paris auto show. A convertible version, badged the 512 GT California, is set to launch a year later. Power will come from a new 400-horsepower V-12 engine.

Big 3 to appeal dumping ruling

The Big 3 may not be ready to accept defeat in their minivan dumping case against Toyota and Mazda. They have decided to appeal the June 24 decision by the International Trade Commission, which in effect ruled in favor of the Japanese automakers, a source familiar with the case said.

That appeal will probably be filed this week, the source said.

In a 4-2 vote, commissioners ruled the Big 3 did not suffer financial harm from Japanese pricing practices in the minivan market. Thus, no penalties were assessed against Japanese minivan importers, despite the fact that the U.S. Commerce Department had earlier found that Toyota and Mazda had "dumped" minivans at unfairly low prices.

The Big 3 have until Aug. 14 to begin the appeal process in New York at the U.S. Court of International Trade.

— Max Gates

House OKs hike of import tariff

The U.S. House of Representatives passed a tariff bill last Friday that includes a 25 percent duty on imported minivans and four-door sport-utilities.

The bill changes the classification of the vehicles from cars to trucks, and thus raises the duty 10-fold from the current 2.5 percent.

The higher tariff, championed by Rep. Sander Levin, D-Mich., is aimed exclusively at Japanese automakers because it exempts the only non-Japanese importers of multipurpose vehicles — Range Rover and Volkswagen.

Congress expects the higher tariff to produce an additional $215 million in revenues.

The Senate has not yet acted on tariff reclassification.

Sales rep Bradley dies

DETROIT — Michael J. Bradley, 51, an *Automotive News* sales representative since 1984, died July 28.

Bradley's accounts included General Motors and Volkswagen of America.

"Mike Bradley was a wonderful human being and a terrific asset to *Automotive News*," said Keith Crain, *Automotive News* publisher. "He touched all of our lives and will be missed greatly."

Bradley was sales and marketing vice president of Suburban Communications Corp. in Livonia, Mich., before joining *Automotive News*. He also held advertising positions with the *Detroit Free Press* and had worked at several Detroit advertising agencies.

Bradley was involved in a number of community and professional activities and lectured on advertising to students at Northwood Institute in Midland, Mich.

Mike Bradley handled the GM and VWoA ad accounts.

"I've always called him the Pied Piper of enterprise," said Bob Ellis, chairman of the school's advertising department. "He wanted to encourage young people to aim for the kind of career they wanted."

Bradley is survived by his wife, Carol, two sons and one daughter. ■

Navistar seeks to cut benefits

Navistar International has filed suit in federal court, seeking to reduce benefits for some 40,000 retirees. The company says those benefits result in a cost disadvantage that threatens its solvency.

The UAW, which represents Navistar workers and retirees, has vowed to take "appropriate action."

An internal Navistar memo said the company has a $200 million cost disadvantage against competitors — $150 million of it in health care costs.

Navistar has a three-to-one ratio of active to retired employes. It also wants active employees to accept a new health plan with co-pays and deductibles. The UAW represents 7,000 Navistar employees.

— Joseph Bohn

Renault loses rights to Jeeps

Chrysler Corp. will terminate on Jan. 1, 1993, the agreement under which Renault distributes Jeep products in France.

Chrysler said last week that Sonauto, Chrysler's distributor of passenger cars and Voyager minivans in France, will begin selling the Jeep Grand Cherokee 4x4 in October and the Jeep Wrangler and Cherokee after Dec. 31.

Chrysler described the parting as "amicable." The change reflects Chrysler's decision to use only one distributor for Chrysler and Jeep vehicles in European markets, Chrysler said.

Renault will continue to service the Cherokee and Wrangler, Chrysler said.

Ford vans get $1,000 cheaper

DETROIT — Ford Motor Co. initiated a higher-than-anticipated $1,000 dealer cash incentive on E-150 van conversions for Aug. 1 to Sept. 23.

The program is in addition to a $1,300 consumer rebate and an extended 150-day free floorplanning the company has been offering on van conversions to Sept. 23.

For more on incentives, see Page 38.

— Joseph Bohn

briefly

A headache in the making

Now comes U.S. Rep. Charles Schumer, (D-N.Y.) with a modest proposal for legislation requiring that all major parts on cars and trucks produced carry a code number (or maybe a vehicle identification number) to deter car thieves and chop shops. It has manufacturers and dealers trembling because there are so many major parts. If you count fasteners, there are 10,000 parts in a typical car. The proposal also calls for establishment of a data base of all those parts and their numbers, and rules about checking the data base when replacing a part or junking a car. If car thieves would quit, we could save a lot of trouble.

SPEAKING OF STEALING — The California State Automobile Association is warning its 3 million members about curbside car sellers who bill themselves as "free-lance" dealers. They specialize in good-looking vehicles that are ready to fall apart, or they salvage cars built from the junk yard. "Typically, the seller works for a dealer but is 'curbing' on the side," says an association press release.

MORE FOR L.A. — General Motors and its Hughes Aircraft Co. subsidiary announced $18 million in support for the Rebuild L.A. effort. The package includes loans for businesses that rebuild in the riot areas and a pledge to buy $15 million more in parts from minority-owned supplier firms.

ALCOHOL FUELS LUMINAS — The state of Illinois took delivery last week of 12 **Chevrolet** Lumina sedans that run on E85 (15 percent gasoline/85 percent ethanol) for the state motor pool. Illinois ranks first in the nation in the production of ethanol, frequently referred to as corn alcohol, and second in production of corn. Corn whiskey, by the way, is something else entirely.

BANKER JOY — Chrysler Corp. Chairman Lee Iacocca, in talking about his company's renegotiated $6.8 billion credit line, said the Jeep Grand Cherokee production is sold out, and units are fetching $2,000 over list in California. "That's the kind of thing that gives a banker great solace," a beaming Iacocca told journalists.

50 HIGH FIVES — Toyota Motor Sales U.S.A. Inc. sent 50 needy Detroit youngsters to the Isiah Thomas basketball camp last week. At the camp, the kids learn good things about hoops and bad things about drugs.

STEMPEL'S PROMISE — General Motors Chairman Robert Stempel said all the right things at the National Urban League's 1992 Conference in San Diego last week. He said the downsizing and restructuring at GM "are not going to affect our continuing commitment to education or diversity in the work force, our dealer body or our suppliers." He said that GM hired 7 percent of all black engineering grads last year; that 21 percent of all GM's college hires were minorities, and that GM will increase minority-owned dealerships from 192 in December 1991 to 260 by December 1993.

COMPANY CARS — Some tidbits from a Runzheimer International Survey and Analysis of Business Car Policies and Practices: ☞ 76 percent of firms permit employees with company cars to use them for personal driving. ☞ In 1991, the average was 22,068 business miles, 4,405 personal miles. ☞ 30 percent of the time, employees buy their own gasoline for personal use of company cars.

Mazda lures dealers to ad association fold

KRISTINE STIVEN BREESE
Staff Reporter

IRVINE, Calif. — To get its dealers to join advertising associations and adopt company-approved marketing programs, Mazda Motor of America Inc. says it will match all association advertising expenditures dollar for dollar — with no limits.

Beginning Sept. 1, when the company launches its new regional marketing program, Mazda will assess a fee that is 1.25 percent of each vehicle's invoice. Money generated from that fee will be used for regional marketing efforts.

Participating dealer groups now are assessed a flat fee, usually $100 per unit sold, that goes into a fund Mazda matches on a program-by-program basis.

Balsiger: Dealers will benefit.

Under the new program, the 1.25 percent assessment will go into two funds.

One fund, the dealer marketing allowance, will be based on 0.25 percent of the car's invoice. All dealers will get that money back quarterly, regardless of what they association is doing.

The biggest chunk, 1 percent of invoice, will go into a local advertising fund. That money will be allocated to dealer ad associations depending on whether they are participating in the formal association program. For those that are, the money will be paid out monthly.

In areas where dealers have been unwilling or unable to form an association, Mazda will reimburse ad costs, but it will not match the funds to increase the overall advertising effort. Non-association dealers will also have to provide tear sheets and invoices.

For the dealers that join the new program, Mazda will also pay all creative production costs and meet quarterly with its dealer Supergroups to get their input on the advertising strategies.

While Mazda stresses that the association program is voluntary, the company is clearly making it a lot more attractive for dealers to sign on than to be left out in the cold.

Rick Balsiger, director of advertising, says he expects most dealers will opt to join the program. In fact, 350 of Mazda's 907 dealers have already been told about the program, and all have signed on.

Balsiger says the co-op funds will increase media buying power and improve Mazda's advertising coverage in each market by 45 percent on average.

Balsiger says the program proves the "new Mazda is more than just five new products — it is a new way of doing business."

Because the ad dollars will be tied to sales and there is no limit to what Mazda will pay in matching funds, he says it will be an incentive for dealers to sell more cars.

Chevy 1st in latest Power truck tally

ARLENA SAWYERS
Staff Reporter

The addition of all full-sized light trucks — vans, sport-utilities and pickups — to a highly regarded consumer survey put Chevrolet and its dealers in the driver's seat for sales satisfaction.

Chevrolet took first place in J.D. Power and Associates' New Light Truck Sales Satisfaction Index, which was released last week. Arch-rival Ford tied for fourth place in the survey with Toyota and Plymouth.

For the second year in a row, Lexus leads Power's New Car Sales Satisfaction Index, followed by Infiniti and Cadillac.

J.D. Power and Associates is an automotive marketing information firm headquartered in Agoura Hills, Calif.

About 36,000 car owners and 9,000 light-truck owners participated in the survey. Consumers rated their buying experiences in terms of salesperson performance, the delivery process and the initial condition of the vehicle.

The study was conducted after the first 90 days of ownership.

Power assigns points based on consumer response. The Power industry average is 115 for cars and 107 for trucks. Among the leaders, Lexus earned 151 points and Chevrolet truck earned 118.

Power does not disclose the scores of makes that rank below the industry average.

For the first time, the light-truck survey included owners of all full-sized light trucks as well as owners of compact trucks, vans and sport-utilities.

General Motors, Ford Motor Co., and Chrysler Corp. are the only manufacturers that sell full-sized pickups.

Joan McConnell, Power account executive, said owners of full-sized trucks were added to the survey to better reflect personal use in the total light-truck market.

As a group, owners of full-sized light trucks rated their sales experience higher than did buyers of compact trucks, McConnell said.

Evaluations of their sales experience by buyers of Chevrolet full-sized light trucks were 14 percent higher than the truck industry average.

"Had full-sized trucks not been involved, the industry average would have increased two points," McConnell said. "With full-sized trucks, the average went up six points."

Other GM products and dealers fared well in the truck Sales Satisfaction Index survey. Oldsmobile finished second with 117 points, and GMC was third with 116. Ford, Toyota and Plymouth tied for fourth with 111 points.

Although only seven points separated Chevrolet trucks from fourth place, Chevrolet General Manager Jim Perkins was elated.

"If I could, I'd give every one of our 4,500 dealers a Texas-size hug," Perkins said.

He said the latest survey results coupled with Power's earlier Initial Quality Study, which ranked Chevrolet the full-sized pickup leader, represent a "one-two punch" for Chevrolet.

Until 1991, Mercedes-Benz held the top spot in the car Sales Satisfaction Index survey. Mercedes tumbled to fifth place in 1991 and to sixth place in 1992.

In 1992, Lexus topped second-place Infiniti by only one point. Cadillac slipped from second place in 1991 to third place in 1992. Saturn moved up from sixth place in 1991 to fourth place this year.

While no domestic has achieved the top position in the car Sales Satisfaction Index survey, they lead the industry in sales satisfaction as a group with a score of 120. European makes have an overall score of 111, followed by Asian makes at 107.

Ford and Chrysler profitable but wary

CHARLES M. THOMAS
Staff Reporter

Despite robust second quarter profits at Ford Motor Co. and Chrysler Corp. that were driven by reduced costs and high-margin truck sales, officials at both companies remain cautious about the third quarter — normally the weakest — and the economy's persistent malaise.

Chrysler boasted surprisingly stronger earnings than securities analysts expected, giving the company its best quarter in two years.

The automaker reported net earnings of $178 million for the quarter, compared with a net loss of $212 million for the same period a year ago. Higher production, lower incentive costs and improved sales of minivans, trucks and Jeeps bolstered earnings.

Iacocca: holds line on LH

"We achieved these results despite the second quarter launch costs for the new LH mid-sized sedans and the Jeep Grand Cherokee, which by the way, is starting to give us some real bite in the retail market," said Chrysler Chairman Lee Iacocca.

Ford posted second quarter net earnings of $502 million, compared with a loss of $324 million in the second quarter of 1991.

"Although we are pleased with the improvements achieved by Ford so far this year, we recognize the rest of 1992 will remain challenging," said Chairman Harold Poling. "The U.S. economy, while improving, is still fragile, as are the economies in many of Ford's key overseas markets."

General Motors will report its profits this week. Securities analysts say earnings could be as high as $479 million, but will be erased by a $749.4 million restructuring cost at its Hughes Aircraft subsidiary.

Vehicle production was a key to the rise in earnings. Production for

units in the second quarter, compared with 2.9 million units for the same period in 1991.

Incentive costs fell slightly at Chrysler to $1,250 per vehicle in the second quarter compared with $1,300 per vehicle for the same period in 1991.

Chrysler's ongoing cost cutting — $1 billion this year — also helped earnings.

Apparently, the automaker also held the line on costs associated with launching its LH models.

Truck and minivan sales soared as traditional car buyers crossed over to minivans and sport-utilities.

Chrysler Financial Corp. posted second quarter earnings of $49 million after a $24 million writeoff on assets the company is selling.

Ford's Financial Services Group buoyed company earnings by contributing $289 million in the second quarter, up $46 million from the same quarter in 1991.

Both companies also reduced sales to daily rental car fleets as retail sales began climbing. Automakers make more money on retail sales than fleet sales.

McCammon: fewer fleet sales

David McCammon, Ford vice president of finance, said incentive costs dropped to $900 per vehicle in the second quarter from $1,000 per vehicle for the same period in 1991. "Dealer orders are good so we will be able to maintain plant schedules," he said.

But McCammon stopped short of saying the auto industry is the bright spot in an overall lethargic economy, and that it could lead the recovery. "The outlook is encouraging and consumer confidence for autos is up," he said.

But he noted that "the economy is growing at a slow rate, unemployment is high at 7.8 percent, the commercial real estate market is overbuilt and the housing mar-

Alaska finds Nissan dealer's ad fishy

IAN MADER
The Associated Press

ANCHORAGE, Alaska — A car dealer who drove his trucks into a salmon stream to film a commercial pulled the ad off the air after the state warned him that he could face imprisonment and a $200,000 fine.

The dealer, Don Reed of Fairbanks Nissan-Volkswagen-Honda Inc., said the advertisement has been withdrawn from all local television stations.

The dealer also issued a public statement that the operation of vehicles in designated important waters where fish spawn is prohibited.

As a result, Cameron Leonard, an assistant attorney general, said the state will not pursue a criminal case against Reed.

It was illegal for the company to drive trucks into the Chatanika River, a state-designated salmon

Weber, the habitat biologist at the state Department of Fish and Game. "It's clearly against the law, and (the commercial gave) the public the idea that this is a fun thing to do — to drive through salmon rivers."

Driving a truck into the Chatanika could crush eggs and disrupt migrations, Weber said.

Biologists from the Department of Fish and Game got involved when an Alaska State Trooper saw the truck ad, recognized the stream and reported the apparent violation to authorities.

Reed, who narrates and stars in the commercial, said he was trying to promote the all-terrain capability of his Nissan trucks.

The ad showed three trucks sitting in a few inches of water.

"The gist of the commercial is there are a lot of beautiful places to go in Alaska, and Fairbanks Nissan will get you there," he said.

we were doing anything illegal. Then again, there are little, bitty salmon in the rocks."

Said Reed, "We had a Ph.D. come over here and explain everything to us, and she told us to pull the ads, and we've pulled the ads."

The incident left Reed and his ad agency somewhat baffled.

"I don't understand why they made such a big deal about it," said Reed.

Environmental groups found it less trivial.

"We think it is really irresponsible to encourage that kind of behavior," said Kevin Harun, executive director of the Alaska Center for the Environment. "Just think of what would happen if everyone would take Nissan up on their vision of driving their vehicles through salmon habitat."

Automotive News Special Correspondent Gwendolyn Zonghetti contributed

TOYOTA

New structure gives advisors to president

continued from PAGE 1

ecutive vice presidents.

All including Eiji, the family patriarch, will retain active management roles, Shoichiro said.

"Future management should not depend on a single leader," Toyoda said at a news conference to announce the change.

"Rather, there should be a group. Three plus five — all eight — will be consulted in decisions of the company, so fields of responsibility may not be clearly defined."

Shoichiro and his cousin have jointly run Toyota with an iron hand since 1982, when Eiji stepped aside as president and became chairman. Thus, although the titles will change in September, the new management structure seems to guarantee that the Shoichiro-Eiji reign will continue.

"I don't think there will be any major change in management," said industry analyst Koji Endo of S.G. Warburg Securities in Tokyo. "For the first few years at least, Shoichiro will still be making the big decisions."

Toyoda said he selected his brother to succeed him "because of his broad experience in production, sales and overseas operations. He is the best qualified person."

Toyoda said the new environment for the auto industry, with its emphasis on globalization, provided the background for selecting the new management team.

DAVID NELSON

Shoichiro Toyoda, left, at the press conference last week in Japan announcing that his brother, Tatsuro, right, has been named the new president of Toyota Motor Corp.

"We are fully cognizant of the tides of the age," he said.

Fluent in English and widely considered to be the most internationally sensitive member of Toyota's founding family, the younger Toyoda served as the first president of Toyota's joint venture with General Motors in California, New United Motor Manufacturing Inc., from 1984-1986.

Altogether, he has spent 12 years in the United States, and holds a master's degree in business from New York University.

The new president will thus present a more international face for a company that has been tied to a provincial base in central Japan since its founding by Kiichiro Toyoda in 1937.

Tatsuro himself, however, softly deferred any questions on what he planned to do as president.

"I will consult with the new chairman and honorary chairman to formulate new policy," he said.

The appointment triggered several questions about the role of family management.

But Shoichiro, pointing out that the family owns less than 2 percent of Toyota's shares, rejected intimations of a dynasty.

"Corporate management is not handed over from one generation to another," he said.

Indeed, he said, Tatsuro likely will be the last Toyoda to head the automaker.

"We are the last generation," he said. "We will be exhausting the family."

The next president is expected to come from the new corps of executive vice presidents. Two likely candidates are Iwao Isomura, who has experience in personnel, and Hiroshi Okuda, who has spent much of his career in finance.

Mexico sales rise 12.6% for first six months of '92

ANNE E. WRIGHT
Chief Statistician

New-vehicle sales in Mexico rose 17.5 percent in June, the sixth consecutive month of increases in 1992.

Each of the five large automakers posted increases for the month:

- Chrysler lead with a 40.4 percent increase.
- Ford rose 30.4 percent.
- General Mctors gained 15.3 percent.
- Nissan was up 14.4 percent.
- Volkswagen was up 1.9 percent.

Overall sales of cars and trucks for the five companies rose 18.3 percent in June. Other truck makers gained 1.6 percent from 1991.

Through the first half of 1992, new vehicle sales are up 12.6 percent. The nation's five automakers were up 12.2 percent and sales by other truck firms were up 21.9 percent at the half-year mark.

Mexico vehicle production mimicked sales with the sixth month of consecutive increases in 1992.

The Big Five produced 101,176 vehicles in June, 26.6 percent more vehicles than the year-ago month, while other truckmakers slipped 10.4 percent to 2,213. For the year, the other truckmakers are up 9.2 percent.

For the first six months of 1992, total vehicle production in Mexico was 566,686, 20.9 percent above the same period in 1991.

Export car production in Mexico for the first half of the year was 211,486, an increase of 36.7 percent from 1991. Most vehicles produced for export in Mexico are headed for the United States.

Scoupe has first Hyundai engine

KRISTINE STIVEN BREESE
Staff Reporter

FOUNTAIN VALLEY, Calif. — Hyundai Motor America President D.O. Chung says that beginning with the 1994 model year, the company will have one new product every year for five years.

INTRO-'93

In the meantime, the 1993 Scoupe sport coupe will have the first engine ever developed and built by South Korea's Hyundai Motor Corp., and the Elantra will have a new engine from Mitsubishi Motors Corp.

SCOUPE: The Scoupe's new Alpha engine is a 1.5-liter, 12-valve, multiport-fuel-injection four-cylinder. It produces 92 horsepower at 5,500 rpm. It has a cast iron block with aluminum head, cast iron crankshaft and carbon steel connecting rods. Hyundai's engineers in Korea have been working on the Alpha engine for six years.

Hyundai says it will still buy engines from Mitsubishi "when it makes sense." But as the name of the new engine suggests, the Alpha is the first of a series of Hyundai-engineered and built engines the company is planning.

The Alpha engine has 14 percent more horsepower and torque than the engine it replaces. The new powerplant will be used in both the base and LS models.

A turbo version of the engine will be Hyundai's first turbo.

For 1993, the Scoupe has styling updates and the first engine designed and built by Hyundai.

Even with the new engine, Hyundai says it plans to keep prices close to 1992 stickers. The base model is expected to be about $8,999, compared with $8,799 for 1992. The turbo option has not been priced yet.

Also new for 1993 are the front fenders and flush-mounted reflector headlights.

ELANTRA: Introduced in the United States as a 1992 model, the Elantra has a new engine after only one year. The base five-speed model retains the 1.6-liter, inline four-cylinder engine, but other models have a 1.8-liter, double-overhead-camshaft 16-valve engine as standard equipment.

The new engine has dual counter-rotating balance shafts to reduce vibration, and it generates 124 hp and 116 pounds-feet of torque.

The Elantra again is offered in two trim levels, base and GLS. Hyundai says it will be able to keep pricing "essentially the same" for 1993, meaning it will start around $8,999. Dealers will begin receiving the 1993 Elantras in October.

SONATA: With the Sonata due to be replaced next year, Hyundai is leaving it unchanged for the 1993 model year except for a new grille and the addition of full wheel covers.

EXCEL: For 1993, the Excel has new wheel covers and a black grille.

HYUNDAI FOR 1993

Model	Wheelbase (inches)	Length (inches)	Width (inches)	Height (inches)	Curb Weight (pounds)	Base engine	Drive type	Body styles
Scoupe	93.8	165.9	63.9	52.1	1,987	1.5L, I-4	fwd	2-dr.
Elantra	98.4	171.6	65.9	54.5	2,452	1.6L, I-4	fwd	4-dr.
Sonata	104.3	184.3	68.9	55.4	2,723	2.0L, I-4	fwd	4-dr.

Southeast Toyota suit settled

LINDSAY CHAPPELL
Staff Reporter

Toyota Motor Corp.'s independent distributor for the southeastern United States has agreed to settle a $22.3 million lawsuit brought by a former Toyota dealer in Anniston, Ala

Carl Ivy, former owner of three Toyota dealerships in Alabama, had accused Southeast Toyota Distributors Inc. of forcing him out of business by denying him adequate inventory in the late 1980s.

Ivy charged that the company pressured him to sell his dealership in order to award it to more aggressive owners.

Southeast Toyota denied the charges.

The parties in the suit agreed not to disclose the settlement amount.

The exclusive distributor is facing about a dozen lawsuits from former and current dealers around its five-state territory of Florida, Georgia, Alabama, North Carolina and South Carolina.

The settlement is a departure from Southeast Toyota's strategy in dealing with the litigation.

The company has vowed to fight the suits, most of which allege that Southeast Toyota engaged in predatory business practices by misallocating vehicles.

Earlier this year, a South Carolina jury ordered the company to pay a current dealer in that state $16.5 million. In North Carolina, state officials also ordered the distributor to pay $3 million in fines for obstructing justice.

A spokeswoman for the distributor said the company intends to fight the remaining lawsuits, not settle them.

The Ivy case went to trial earlier this year, but the judge ordered a mistrial after a witness speculated about the personal wealth of Southeast Toyota owner James Moran.

Under Alabama law, juries are not allowed to consider a defendant's wealth.

The suit was settled three days before a new trial with a new jury was scheduled to start.

Battery firm offers warranty

SALT LAKE CITY — A Utah company has announced a 100,000-mile warranty on its battery pack for a retrofitted electric pickup truck.

B.A.T. Technology Inc. said that in the 1993 model year, it will retrofit about 500 new Ford Ranger pickups with its Ultra Force lead-acid battery pack and DC electric motors.

The company, a subsidiary of October Associates of West Valley, Utah, says it will escrow the price of a replacement battery pack for three years in the customer's name to back up the battery warranty. The company also said it will warranty the trucks to achieve at least a 100-mile range per charge.

Company President Joseph LaStella, a former power company engineer, said B.A.T. Technology has developed a catalyst additive for the electrolyte that retards sulfation of battery plates and has a lower impedence, allowing for faster recharges and deeper discharges.

He said the batteries hold 20 kilowatts of power, equal to about 27 horsepower.

LaStella said the first 25 Rangers will be sold for $22,900. He did not announce subsequent pricing.

The company's plant in Springville, Utah, has an annual capacity of more than 1,000 units, hesaid.

The DC motor will be linked to Ford's five-speed manual transmission, he said. He added that with the battery pack, the truck's payload is reduced from about 1,600 pounds to 800 pounds.

calendar

GENERAL — '92

Aug. 5-7 — University of Michigan Automotive Management Briefing, University of Michigan and *Automotive News*, Grand Traverse Resort, Traverse City, Mich., (313) 764-5592

Aug. 10-13 — Future Transportation Technology Conference & Exposition, Westin South Coast Plaza Hotel, Costa Mesa, Calif., (313) 649-0420

Aug. 11-15 — Glass Management Institute, National Glass Association, Georgetown University, Washington, (703) 442-4890

Aug. 25-27 — Auto-Tech '92, Automotive Industry Action Group, Cobo Conference and Exhibition Center, Detroit, (313) 358-3570

Sept. 8-13 — Automechanika (trade fair for automobile workshop and service station equipment and auto parts and accessories), Messe Frankfurt GmbH, Frankfurt Fair and Exhibition Centre, Frankfurt, (069) 75 75 6320

Sept. 9-10 — LP-Gas Alternative Fuel Symposium, National Propane Gas Association and LP-Gas Clean Fuels Coalition, Sheraton International at O'Hare, Chicago, (708) 515-0600.

Sept. 9-16 — Manufacturing '92, Society of Manufacturing Engineers, McCormick Place, Chicago, (800) 733-4SME

Sept. 9-17 — International Machine Tool Show, Association for Manufacturing Technology, McCormick Place, Chicago, (703) 827-5288

Sept. 14-17 — SAE International Off-Highway & Powerplant Congress & Exposition, Milwaukee Exposition Convention Center & Arena, Milwaukee, (412) 776-4842, Ext. 456

Sept. 16-19 — National Association of Fleet Resale Dealers, annual conference, World Center Hotel, Orlando, Fla., (310) 203-0907

Sept. 19-24 — International Corrosion Congress, National Association of Corrosion Engineers, Westin Galleria Hotel, Houston, (713) 492-0535

Sept. 26 — Second Annual Walter Mitty Motors Mini-Grand Prix, Grand Rapids, Mich., (616) 942-7866

Sept. 28-Oct. 1 — Passenger Car Meeting & Exposition, Hyatt Regency, Dearborn, Mich., (313) 649-0420

Sept. 29-Oct. 2 — Natural Gas Vehicles Conference, American Gas Association and Natural Gas Vehicle Coalition, Walt Disney World, Orlando, Fla., (703) 841-8574

Oct. 2-4 — Consumer Automotive Products & Services Exposition, Automotive Parts & Accessories Association, McCormick Place West, Chicago

Oct. 5-7 — Quality Upstream conference and exposition, Engineering Society and American Society for Quality Control, Chrysler Technology Center, Auburn Hills, Mich., (313) 995-4440

Oct. 18-31 — Automotive Dismantlers and Recyclers Association Convention, Hyatt Regency, Phoenix, (703) 385-1001

Oct. 19-21 — Convergence '92, SAE and Institute of Electrical and Electronics Engineers, Hyatt Regency, Dearborn, Mich., (313) 594-7648

Oct. 21-23 — National Electric Vehicle Infrastructure Conference, Electric Power Research Institute and Pacific Gas and Electric Co., Mark Hopkins Hotel, San Francisco, (415) 855-2010

Oct. 27-28 — Tyretech '92, *European Rubber Journal* and Rapra Technology Limited, Novotel le Bagnolet, Paris, 44(0)71 608 1116

Oct. 27-29 — Regional Technical Conference of The Society of Plastics Engineers Chicago Section, Sheraton O'Hare, Rosemont, Ill., (312) 463-6150

Oct. 27-30 — 15th World Energy Engineering Congress, Georgia World Congress Center, Atlanta, (404) 446-0007

Oct. 28-31 — Automotive Dismantlers & Recyclers Association 49th Annual Convention and Exposition, The Phoenix Civic Plaza, Phoenix, (703) 385-1001.

Nov. 1-4 — Stapp Car Crash Conference, SAE, Stouffer Madison Hotel, Seattle, (412) 776-4841

Nov. 3-6 — Automotive Aftermarket Industry Week; Automotive Service Industry Association, Motor and Equipment Manufacturers Association, Specialty Equipment Market Association and Automotive Parts & Accessories Association; Las Vegas, (619) 284-9268 or (708) 850-7779

Nov. 18-19 — Auto Recycle '92 Conference, Schotland Business Research Inc., Radisson Plaza Hotel, Southfield, Mich., (609) 520-0100

DEALER CONVENTIONS — '92

Ky. antes up $44 million for Ford

FRANKFORT, Ky. — Kentucky has put together a $44.3 million package of tax abatements, grants and employment services to persuade Ford Motor Co. to expand its Louisville assembly plant.

Ford plans a $650 million, 1 million-square-foot addition. Employment would grow by 1,400 with a payroll of $60 million annually. First phase construction is slated to start in August.

The company announced expansion plans in April and has been negotiating incentives since. First phase expansion will allow production by October 1993 of 300 F-series Super Duty commercial and RV chassis, F-350 Chassis Cabs, and F-350 Crew Cab pickups.

The biggest part of the incentive package are corporate tax abatements totaling $32 million. Those tax credits will be available to the company over 10 years.

Kentucky expects to get back its money 10-fold in increased tax revenues, said Lt. Gov. Paul Patton, who also heads the state's Economic Development Cabinet.

Patton said, "This package is consistent with what will be offered to other companies in the future."

— The Associated Press

Chrysler makes Mexico executive a vice president

HIGHLAND PARK, Mich. — Carlos Lobo, president and managing director of Chrysler de Mexico S.A., has been elected a vice president of Chrysler Corp.

Lobo, 43, will continue reporting to Chrysler President Robert Lutz and retain current duties.

Chrysler de Mexico employs 11,000 and produced 195,000 vehicles for Mexico and North America last year.

U.S. AND CANADA CAR AND TRUCK PRODUCTION

Vehicles are assembled in the United States unless noted. Vehicles are cars unless noted.

Car build dwindles to 64,000

GWENDOLYN ZONGHETTI
Special Correspondent

The first week of Jeep Wrangler production in the United States brought output of 267, and the total almost doubled, to 500, in last week's second try. The Wrangler sport-utility has joined the Jeep Cherokee at Chrysler Corp.'s Toledo, Ohio, facility.

U.S. car production last week was scheduled at 64,132, down 5.3 percent from the prior week and 16.7 percent from 1991.

Year-to-date auto production in the United States is 3,303,797, up 4.8 percent from the same point in 1991.

In Canada last week, car production was estimated at 14,878, which was 3½ times the 4,132 assembled the previous week.

So far this year, Canada has produced 606,811 cars, down 4.3 percent from the 1991 period.

Truck production in the United States was 49,787, up 13.9 percent from the prior week and 14.9 percent over the year-ago week.

This year, 2,253,073 trucks have been assembled in the United States, up 17.8 percent over last year.

Canadian plants assembled an estimated 7,324 trucks, a 52.6 percent jump above the prior week, but a 25.5 percent fall from the year-ago week.

Year-to-date truck production in Canada is 585,976, up 24.1 percent over 1991.

Last week's estimated daily build rate of cars and trucks in the United States and Canada was 27,224, up 13.1 percent from the prior week but down 1.6 percent from the 1991 week.

Scheduled car and truck production was shared as follows:

Ford Motor Co., 46.6 percent; Chrysler Corp., 16.5 percent; Honda of America Manufacturing Inc., 8.4 percent; Auto Alliance International Inc., 6.1 percent; Nissan Motor Manufacturing Corp. U.S.A., 5.4 percent; New United Motor Manufacturing Inc., 5.1 percent; Toyota Motor Manufacturing (U.S.A.), 4.3 percent; Subaru-Isuzu Automotive Inc., 2.3 percent; Diamond-Star Motors Corp., 1.9 percent; miscellaneous, 1.7 percent; Navistar International Corp., 1.4 percent; and AM General, 0.3 percent.

General Motors assembly plants in the United States and Canada resume production today after a two-week vacation.

Last week, Ford slated daily overtime at its Chicago car plant, its Louisville, Ky., truck plant and its Kansas City. Mo., car-truck plant.

Ford's St. Louis truck plant worked two shifts of overtime last Saturday and will work three seven-hour shifts daily this week.

All Ford plants in Canada and the Toyota plant in Cambridge, Ontario, are closed today in observance of a civic holiday.

Chrysler's St. Louis and Windsor, Ontario, truck plants are scheduled to work overtime next Saturday. ■

GM suppliers decry bid tactics

Some are forced to bid on their own projects

AL FLEMING
Industry Editor

TRAVERSE CITY, Mich. — The purchasing system created by General Motors worldwide purchasing czar J. Ignacio Lopez has caused such a stir among suppliers that some have resorted to a grim sense of humor.

"It's good news, bad news," said one engine components supplier.

"The good news is we're bidding on 12 projects for GM.

"The bad news is five are our own."

Although Lopez did not attend the University of Michigan's Automotive Management Briefing seminar here last week, other GM executives tried to calm a flood of supplier concerns that dominated conversations among the 800 attendees. The main thrust of the criticism is that Lopez wants unrealistic price cuts of 20 percent or more, and wants them so badly he is forcing suppliers to reopen and renegotiate signed contracts.

Many suppliers are unwilling to publicly voice their objections, fearing a loss of GM business or other reprisal as payment for their candor.

Suppliers attending the conference shared several Lopez horror stories:

Lopez: controversy

latenews

Agreement near on trade pact

U.S., Mexican and Canadian negotiators appeared to be close to the final wording on a North American free-trade pact late last week.

The rules of origin on automobile content remain the "last, key sticking point" to wrapping up the controversial treaty, a project source said.

At the end of the week, the negotiations were headed toward a North American content standard of 60 percent to qualify for duty-free auto trade among the countries. That would be lower than the 65 to 70 percent that U.S. auto industry groups had lobbied for but higher than the 50 percent requirement that Japanese-industry interests urged.

Iacocca exit has Kerkorian eyeing board

CHARLES M. THOMAS
taff Reporter

Kirk Kerkorian, corporate raider nd billionaire financier, is hintng that he wants a seat on Chrysler Corp.'s board of directors ow that Chairman Lee Iacocca as said he will retire at year end.

Kerkorian has even called for a meeting with the board of directors as soon as possible to discuss what he terms "important issues."

"It's clear Kerkorian has requested a seat on the board but how much does 10 percent stock wnership get you — one seat or ore," said Steve Girsky, analyst with New York-based Paine Weber. "Management will definitely eet with him — they would meet with anybody who is that big of a hareholder."

Kerkorian: Let's meet

PRODUCT BARRAGE

Chrysler has new vehicles, but can't decide who sells them

First in a series exploring future product plans of the U.S. Big 3 and Asian and European importers.

MARY CONNELLY
Staff Reporter

One certainty: Chrysler Corp. plans to unleash a product barrage in the 1990s.

One uncertainty: What brands will sell the new vehicles?

Chrysler is in the midst of replacing virtually its entire car and truck lineup by mid-decade. But while the company knows what products it wants to field, it hasn't decided what divisions will market the lineup of new cars and minivans.

Chrysler has said it plans to merge its Chrysler-Plymouth and Jeep-Eagle franchises by the year 2000 and is considering dropping either the Eagle or Plymouth brand as part of the consolidation.

The company has mounted a far-reaching study of how many brands, dealers and nameplates it will need by the end of the decade. So far, nothing has been finalized.

Chrysler President Robert Lutz has stressed that neither Eagle nor Plymouth faces imminent demise. "There are new products planned for both of those franchises through the 1995 model year," he notes. Nonetheless, officials candidly acknowledge that Chrysler probably has too many brands and nameplates for today's market.

FUTURE PRODUCTS

The company will launch a new subcompact in the 1994 model year and a new compact midway through the 1995 model year. The PL subcompact is a replacement for the Dodge Shadow and Plymouth Sundance. The JA compact is a replacement for the Dodge Spirit, Plymouth Acclaim and Chrysler LeBaron sedans. But Chrysler has not decided which of its retail networks will sell the PL or JA models. For example, a merged Jeep-Eagle-Chrysler-Plymouth franchise wouldn't likely need both a LeBaron and Acclaim JA sedan.

Even future marketing of Chrysler's successful

Downturn batters Japanese auto suppliers

Cracks appear in keiretsus as losses continue to swell

MARY ANN MASKERY
taff Reporter

TOKYO — Japanese suppliers are bearing the runt of the economic and political pressures ounding their industry.

The Japanese boom of the late 1980s has now yielded a severe hangover, and the suppliers are suffering more than anyone else. By some estimates, they will face hard times for another 10 years.

"The suppliers will suffer severely," says analyst Katsumi Takahashi at the University Securities Research Institute. "They are the shock absorbers of the industry."

In the meantime, the pressure has exposed cracks in the vaunted Japanese *keiretsu* system of interlocking companies. With that, doors could open for U.S. suppliers seeking business with Japanese automakers.

Japanese suppliers matched their manufacturers during the 1980s when the industry splurged on new plants and equipment. In the process, automakers nearly doubled lineups with multiple platforms and quadruple variations in fierce competition for niche sectors.

When the automakers started to move assembly to Kyushu in southern Japan, suppliers fol-

Dealer tally is 23,081; down 287 in 1st half

JOHN K. TEAHEN JR.
Senior Editor

Dealership attrition slowed a bit in the first half of 1992, but the rate of loss remained high.

The latest *Automotive News* census found 23,081 new-car outlets in operation in the United States on July 1, down 287 from the 23,368 counted on Jan. 1. The dip compared with declines of 328 in the first half of 1991 and 576 in the second half of 1991.

A reduction in the death rate of dealerships is good news, but the trend line detracts from the pleasant tidings.

If the attrition continues at its first-half pace, this year's decline in the number of new-car stores will be 2.5 percent. Only three times in the last 25 years has the decline been greater than that. In 12 of those 25 years, it was 1 percent or less.

But even a 2.5 percent falloff this year would be a considerable improvement over 1991, when the total plunged 3.7 percent.

In the recession of a decade ago, the dealership population suffered successive annual declines of 5.6 percent in 1980, 2.4 percent in 1981 and 3.8 percent in 1982.

The first-half slip showed that the recession is definitely not over in the retail auto industry. Car sales have improved slightly this year, but for the dealer, sales are only part of the equation. Profit is

'95 Continental to get mod V-8

TRAVERSE CITY, Mich. — The 32-valve four-cam engine that Ford Motor Co. will introduce in the Mark VIII in December will be used in the new Continental, due in 1995.

Robert Transou, general manager of Ford's Powertrain Operations, confirmed that the powerful all-aluminum V-8 will be in the Continental, with some modifications, to give more torque in the mid to high range to compensate for the car's front-wheel-drive drivetrain.

The 32-valve engine will exceed 280 mph and more than likely will be used in the new Mustang as well, Transou said.

Transou would not confirm that Ford may introduce a five-speed automatic transmission in the new Taurus and Sable, due in 1995 or 1996. He said several companies are developing five-speed automatics to enhance fuel economy, particularly in larger vehicles.

Nissan buys GM engine blocks

TRAVERSE CITY, Mich. — Nissan North America Inc. has taken delivery of 100 engine blocks — the first of an estimated 10,000 per month — made by General Motors.

Shigenori Asoh, general manager of Nissan's international purchasing department, made the announcement last week at the University of Michigan Automotive Management Briefing seminar.

Under the agreement, GM Powertrain in Defiance, Ohio, will supply cylinder blocks to Nissan's Yokohama plant, where 3.0-liter V-6 VG30 engines will be assembled. Nissan plans to purchase 10,000 blocks per month by April 1993, Asoh said.

Separately, Nissan said it would import to Japan $3 million worth of Autolite advanced double-platinum spark plugs from Allied-Signal Automotive of Southfield, Mich.

Both announcements are part of Nissan's commitment to buy $3.7 billion worth of U.S. parts and materials by 1995.

ASC to supply U.S.-built BMW

SOUTHGATE, Mich. — BMW AG has signed ASC Inc. to provide roof systems for its planned production vehicle in the United States.

ASC is the first supplier BMW has chosen.

The German company will have a total of 21 suppliers of major systems and approximately 30 subsuppliers in North America for the new vehicle.

Problems grow for VW Mexico

MEXICO CITY — Volkswagen de Mexico announced Friday that parent Volkswagen AG has suspended an axle contract with its Mexican subsidiary because of the labor conflict that has shut VW's Mexican plant for three weeks.

The Puebla plant was building 1,200 axles a day for the German parent, a spokesman said.

The announcement may have been a warning to union dissidents. Last week, Volkswagen de Mexico awaited a decision on its petition to the Mexican government to disband the union. Dissidents say a July 2 contract was negotiated without rank-and-file approval. The conflict led to work stoppages before VW closed the plant.

— *John Watling*

NADA buys auction data

After some saber rattling over price, *N.A.D.A Official Used Car Guide* publishers agreed last week to a three-year extension of a contract to buy vehicle price data from AuctionNet.

AuctionNet is operated jointly by the National Auto Auction Association and the National Automobile Dealers Association.

Although officials declined to disclose the price of the data, sources said AuctionNet trimmed the price to NADA, which publishes the used-car price guide.

NADA uses the data to fix used-car and truck prices in the *N.A.D.A. Official Used Car Guide*, which has more than 400,000 subscribers.

— *Charles M. Thomas*

Illinois pounces on 78 dealers

SPRINGFIELD, Ill. — A surprise inspection of 78 new- and used-car dealerships across Illinois revealed that every dealer had some non-compliance with Illinois consumer protection laws.

Of the 2,374 used cars inspected, 51 percent did not have Buyer's Guides posted in the windows.

The 1984 Federal Trade Commission Used Car Rule requires dealers to place a Buyer's Guide sticker in the window of each used car offered for sale.

The stickers provide warranty information.

briefly

Senate sticks up for content tag

Like the nutrition guide on the side of your favorite ice cream carton, autos may have to reveal how much imported content they have. The Senate last week voted to require window stickers on 1994 cars to list their U.S. content and identify countries that supply at least 15 percent of the parts. The bill has been praised by the UAW but is sure to be attacked by Japanese importers and transplants, since its counting method excludes port-installed options and U.S. factory costs like assembly labor and mortgage expenses.

EXPLORER OF OPTIONS — A sport-utility for **Mercury** dealers? "Unlikely but not impossible," says Alexander Trotman, **Ford Motor Co.** executive vice president. Trotman says the company will watch sales of the new Mercury Villager minivan for a couple years, and if Mercury dealers do extremely well with the Villager, "then that would pose a serious question for us," he said.

NO ROOM ON BANDWAGON — At an auto conference last week, **Mazda** President Yoshihiro Wada lauded the Big 3 for forming consortia to jointly research projects such as electric-car batteries and recycling. But when Wada suggested that the consortia open their membership to other automakers like Mazda for example, executives from the Big 3 balked, reported *The Detroit News*. But all is not lost. A **General Motors** executive said once the domestic automakers learn how to cooperate in "blissful harmony," maybe the doors will swing open for others.

SELL, SELL, SELL — B&K **Chevrolet** in Peoria, Ill., is taking program car sales seriously. Last week the dealership opened what it says is the largest indoor used-car mall in the world featuring program cars — over 300 under one roof. Customers can also enjoy a free snack bar and supervised child care at the facility. The dealership hopes to move 250 vehicles per month.

POLITICAL AWAKENING — **Ford Motor Co.** will host a Government Awareness Fair today rallying around the slogan GIP-O-GOOB (Get into Politics or Get Out Of Business). This is Ford's first effort to educate employees on the impact of political legislation on competitiveness. Workers may register to vote and acquire information on legislative issues. The fair will feature exhibits on technology and safety, lunch and marching band entertainment. Ford expects 1,000 employees to attend.

HIGH AND DRY — **Chrysler Corp.** Chairman Lee Iacocca said he was sorry to see Ross Perot drop out of the presidential race. Iacocca said Perot was the only candidate to talk to him at length about a possible cabinet post. "I wish he had stayed in," Iacocca said at an auto conference sponsored by the University of Michigan in Traverse City, Mich. Iacocca will retire the end of the year and is a big proponent of balancing the trade deficit between the United States and Japan. He said he has not been approached by President Bush or Democratic candidate Bill Clinton.

Iacocca: disappointed

Car sales still bleed dealers' net profit

CHARLES M. THOMAS
Staff Reporter

Hurt by weak sales and weary of an economy that seems to just bump along, dealers continue to lose money in their new-car departments while total dealership profit as a percent of sales is stagnant.

Profits in the new-car department, before sales expenses and overhead, fell to a record low of 7.1 percent in 1991, according to the National Automobile Dealers Association.

The 7.1 percent does not include sales of extended-service contracts or finance charges and other add-ons.

Strauss: margin concerns

"Dealers have to ask themselves what their margin of profit is and what it will take to make money," said Richard Strauss, NADA president and owner of Dick Strauss Ford-Isuzu-Suzuki in Richmond, Va. "At 7.1 percent, a dealer is losing money."

From a record of $313 billion in 1990, total dollar sales of all franchised new-car dealerships fell to $305 billion in 1991, according to NADA Data, an annual study conducted by the association.

Slow new-car sales and only modest price hikes have kept the average dealership's total dollar sales stagnant for the past three years.

Total dealership net profit before taxes expressed as a percent of sales was 1 percent in 1991 — the same as in the prior two years.

CHARLOTTE WINTER / AUTOMOTIVE NEWS

Third Ford pickup in works for mid-'90s

New truck will be smaller than F Series, appear after '95

KATHY JACKSON
Staff Reporter

TRAVERSE CITY, Mich. — Declaring that Ford Motor Co. is "damned determined" to stay competitive in the pickup truck market, Alexander Trotman said the company will unveil a third pickup truck sometime after the 1995 model year.

Trotman, executive vice president of Ford North American Automotive Operations, was in Traverse City to address the University of Michigan's Automotive Management Briefing seminar. In an interview following his remarks, Trotman said the new truck will be larger than a mid-sized truck but smaller than the F series. He would not elaborate further.

Trotman discounted rumors that Ford will get out of the compact truck business and make the Ranger compact a larger truck.

Instead, he said Toyota's imminent entry into the nearly full-sized-truck segment means "there is a need for a third pickup in the foreseeable future" at Ford.

Ford's new truck likely will be the size of the new truck that Toyota Motor Sales U.S.A. Inc. will introduce to the public in November. Toyota's T100 is about four inches shorter, narrower and lower than Ford's F-150 pickup, but it is about six inches longer and wider than the Dodge Dakota mid-sized truck.

Trotman said the pickup market represents about 24 percent of all vehicle sales, and that percentage has remained pretty constant the past 20 years. He said the pickup market is unlikely to grow, so sales of Toyota's new truck will come out of somebody's hide. "It could hurt Toyota's compact pickup," he said, "but I can't imagine Ford will be totally invincible." ■

July sales dip 2%; Big 3 trucks still hot

JIM HENRY
Staff Reporter

Sales of light vehicles in the United States dipped a bit to 1.1 million in July, reversing six months of shaky improvement.

Still, the seasonally adjusted annual rate of 13.1 million units was the second-highest in 1992, behind June's 14.0 million.

And the industry's 1,138,530 car and truck sales were just 2.4 percent behind July 1991, last year's best month. Then, 14 nameplates posted better sales than a year earlier. Last month, 19 did.

But consumer confidence fell sharply in July, according to a survey conducted for The Conference Board in New York.

Initial unemployment claims have increased recently, and election-year politicking probably has people worried about the economy, said Fabian Linden, executive director.

Tom Webb, chief economist for the National Automobile Dealers Association, said the numbers were "no surprise" in view of the slowdown in the economy. "Sales are better than they were earlier in the year, but this is no real recovery," Webb said.

The action continues to be in light trucks, where Big 3 sales rose 7.0 percent in July and Japanese marques fell 14.6 percent.

As car share held steady, Big 3 truck market share jumped 3.2 points to 85.3 percent, while Japanese trucks fell 3.0 points to 14.7 percent.

The pattern was the same for the

Chrysler adds 5th LH car — sporty New Yorker LHS

MARY CONNELLY
Staff Reporter

MORE ON LH
Chrysler's product plans > 1
Florida tourist test > 33

Chrysler Corp. will introduce a fifth LH model, called the Chrysler New Yorker LHS, next spring.

The New Yorker LHS will be a limited-volume luxury sport version of Chrysler's new line of sedans. It will be the top-of-the-line model in the LH family.

The previously announced New Yorker and its new sporty companion, the New Yorker LHS, will be 1994 models built on a 207-inch wheelbase. The 1993 LH triplets — the Concorde, the Dodge Intrepid and the Eagle Vision — are built on a 200-inch wheelbase.

The addition of the LHS model means that Chrysler brand dealers will sell three LH versions: the Concorde, the New Yorker and the New Yorker LHS.

The New Yorker models are expected to compete with a range of domestic and imported luxury sedans including the Cadillac Seville STS, Lexus SC400, Infiniti J30 and Buick Park Avenue Ultra.

Chrysler executives earlier this year suggested that the Lexus SC400 is the competitive product target for the New Yorker, but that the car will be priced against such domestic models as the Buick Park Avenue, which has a 1992 base price ranging from $25,285 to $28,780.

Chrysler claims the LH cars are worthy competitors for the best sedans born in Germany or Japan.

"There is really nothing traditionally American about this vehicle," Chrysler President Robert Lutz has said of the LH. "This is the first American car that in terms of interior and exterior styling, ride and handling — and the way the whole car looks, feels and sounds — is like a German or Japanese car."

Chrysler has not confirmed the LHS. But service and parts operations manuals for the LH models include the LHS.

Chrysler plans to begin building the New Yorker Feb. 8, 1993, at its Bramalea, Ontario, plant. Production of the LHS models begins shortly after, according to sources familiar with the plans.

The two models share sheet metal and a 3.5-liter, 24-valve, V-6 engine. But suspension, trim levels and other styling cues will differ.

The LHS is the direct descendant of the Chrysler New Yorker concept car unveiled at the North American International Auto Show in Detroit in January 1992.

A hallmark of the LHS will be a monochromatic trim and grille design with few exterior cladding accents. The five-passenger sedan will have bucket seats and a center console and most likely will use 16-inch wheels.

The LHS will feature a touring suspension that differs from the standard suspension offered on the New Yorker.

In contrast, the New Yorker is expected to be offered as a six-passenger sedan with 50-50 split bench seats and 15-inch wheels. The New Yorker's exterior will use more traditional trim, including chrome accents.

The LHS may owe its existence to the uniformly rave press reviews the New Yorker show car generated.

There are suggestions that Chrysler had planned to field only the more conventionally packaged New Yorker, but added the LHS model after the concept car's show-stopping reception.

Dealers have not been briefed on the decision to offer two extended-wheelbase LH models. It is likely the New Yorker will be marketed to domestic luxury sedan buyers and the LHS to those shopping the import luxury segment.

Chrysler dealers this fall begin selling the 1993 Concorde, which is offered in only one version.

The 3.5-liter engine that will be standard in the New Yorker model is optional on the Concorde. The Concorde's standard powerplant is a 3.3-liter V-6.

The Concorde's base price is $18,341 but Chrysler has said it will sell for $19,500 to $22,000 typically equipped.

It is not clear how the New Yorker models will be priced, but the LHS is expected to be the priciest of the LH lineup. ■

JIM FRENAK

The LHS will more closely resemble the concept car; the more traditional New Yorker will have chrome accents.

JOE WILSSENS/AUTOMOTIVE NEWS

Chrysler may have added a fifth LH model after the New Yorker concept car's show-stopping reception at the Detroit auto show in January.

Mercedes adds holdback

Dealers get interest but no late billing

JIM HENRY
Staff Reporter

Not much new yet for '93 ➤ 15

NEW YORK — In an effort to shore up transaction prices, Mercedes-Benz of North America Inc. has adopted a "dealer reserve program" for the 1993 model year.

It is a holdback with two important differences. Mercedes-Benz will pay interest on the funds withheld, and only a portion of the funds will be returned quarterly. Dealers will get the rest at the end of the year.

In a holdback, the manufacturer withholds part of the dealer discount when the dealer purchases the vehicle — usually 2 or 3 percent of the suggested retail price — then returns the money later, generally quarterly.

The Mercedes dealer discount is 20 percent. A 1993 300SE, which retails for $69,900, will cost dealers about $58,000, with about $2,000 (3 percent of the sticker price) held in reserve.

Mike Jackson, executive vice president, explained how the program differs from other holdbacks.

Mercedes puts the dealer money into an interest-bearing account, at the prime rate plus 2 basis points. Mercedes pays interest because it does not offer dealers delayed billing, as other holdback programs do. The Big 3 figure that the floorplan money saved through delayed billing balances out the interest the dealer could earn on the holdback.

Like other companies, Mercedes doles out the money four times a year. But unlike other programs, most of the money — about 75 percent of the total — is saved for a big payoff at the end of the year.

In addition, the money goes into the dealer's account when the car is sold or leased, not when the dealer buys it.

"Most dealers are very positive about it, because it is different" from holdbacks at other companies, said Alan Feldman, dealer council chairman. Feldman owns Sovereign Motor Cars in Brooklyn, N.Y., a Mercedes exclusive, plus separate Jaguar and BMW-Porsche dealerships.

"Since Mike Jackson has been there, things have been a little different. He was a dealer, and he can understand the dealer standpoint," Feldman said. Jackson was part owner of EuroMotorcars in Bethesda, Md., before joining Mercedes in 1990.

Mercedes hopes the program will improve dealer profits and boost transaction prices, which in most cases are below sticker.

In effect, the program raises dealer cost temporarily, and that should raise sale prices.

Feldman said a holdback sets aside money that dealers might otherwise bargain away in order to close a deal. The Mercedes program, with most of the money withheld until the end of the year, further removes that temptation.

"If you know the check's only three or four months away, the guys who are going to do it (cut prices) will do it," he said. "If it's far enough down the road, they might be less tempted." ■

Monteros, Troopers get tepid reception

KRISTINE STIVEN BREESE
Staff Reporter

LOS ANGELES — For almost 10 years, the Isuzu Trooper and Mitsubishi Montero sport-utilities built reputations as low-price, high-value alternatives to wagons and minivans. Then earlier this year, the companies introduced redesigned products that shed that image and went upmarket.

But consumers haven't followed. While U.S. compact sport-utility sales rose 20.3 percent in the first seven months, the Trooper and Montero hit a roadblock. The segment-leading Ford Explorer continues to gain and now holds a third of the U.S. market. The hot new Jeep Grand Cherokee already claims 5.2 percent of the market.

In the process, compact Japanese sport-utilities, including the Montero and Trooper, have seen their share slip to 17.4 percent, down from 22.8 percent last year.

So far, at least, customers don't appear eager to plunk down $18,000 to $25,000 for Troopers and Monteros that last year cost as little as $14,000. That's in spite of their more rounded lines, upgraded engines, increased comfort and long list of car-like amenities.

For the first seven months of the year, Trooper sales were down 60.8 percent from a year ago. At its current pace, the Trooper will finish the year nearly 6,000 units behind the 16,000 units American Isuzu Motors Inc. projected when the vehicle was introduced in January.

But there's been some consolation. As Isuzu expected, the less-expensive, U.S.-built Rodeo sport-utility has become the firm's volume leader. What's more, Rodeo sales have jumped nearly 60 percent this year in the process.

Montero sales, however, were off 33.9 percent after seven months. It, too, is trailing projections. To jump-start sales, Mitsubishi Motor Sales of America Inc. introduced a lease program last week that costs $1,000 down and $399 a month.

Analysts and company executives suggest several reasons why the Trooper and Montero — which both have been well-received by the automotive press — are not doing better.

"The evolution from affordable to upscale is not happening as fast as anybody would like," said Jerry O'Connor, Isuzu's vice president of marketing and services. "But sales are increasing each month, and our research with buyers and owners of the old Trooper tells us that we're not off mark."

Susan Jacobs, president of Jacobs Automotive, an auto research firm in Little Falls, N.J., agrees the companies' strategy is sound: "The problem is the market. If either of these companies is going to re-establish its products, it needs a growing market, not a shrinking one."

"Neither of these companies should consider the product wrong or the strategy to go upmarket a mistake," Jacobs said.

Indeed, the old Trooper and Montero were truck-like models, with few amenities. Their replacements are far more refined and reflect the segment's evolution from utility to comfort and convenience.

George Peterson, president of AutoPacific Group, a consulting firm in Santa Ana, Calif., said the problem is Mitsubishi and Isuzu don't have the marketing muscle to make themselves heard above Explorer and Grand Cherokee ads.

"The advertising weight and the popularity of the Explorer and Grand Cherokee have drowned Mitsubishi and Isuzu out. If they could advertise the way that the big guys are, they'd have a lot more success," Peterson said.

Indeed, Chrysler Corp. spent $40 million in six weeks this spring to launch the Grand Cherokee, says *Advertising Age*, a sister publication to *Automotive News*. Ford Motor Co. countered with its own five-week campaign for the 2-year-old Explorer; *Adweek* magazine pegged Ford's bill at $28 million.

By contrast, Isuzu spent $17 million over four weeks to launch the Trooper. Mitsubishi gave the Montero only limited attention, since it tries to spread its advertising dollars over a large product line.

"Awareness is a big part of it," said Rick Lepley, Mitsubishi's senior vice president of marketing and sales. "We elected not to spend a lot of money advertising the Montero. We've had to pick and choose, and we picked to spend heavily to move the Eclipse, and that's working."

Lepley said Mitsubishi will spend about $1 million a month advertising the Montero this year.

He said the Montero is less than 100 units behind internal forecasts of 6,450 units for the 1992 calendar year — although the company said late last year that 12,000 units was its annual goal.

Lepley says Mitsubishi will probably drop the entry-level Montero within 10 months to simplify its lineup. The mid- and high-trim models are selling the best.

Although the base price of the Montero is $18,509, the average purchase price of the new Montero is $22,950. That, Lepley says, validates the decision to move upscale.

Isuzu will add a two-door model this fall. Dick Gilmore, Isuzu's director of marketing, said the two-door will be available around October and be priced below the four-door. Although sales of two-door sport-utilities are shrinking, Gilmore said Isuzu "has done well in that segment before," and is expecting to again. ■

Hughes write-off erases GM earnings

Officials maintain gloomy outlook

CHARLES M. THOMAS
Staff Reporter

General Motors officials last week expressed doubts about the economy during the next six months after sustaining a second-quarter net loss of $357.1 million due to a one-time restructuring charge of $749 miliion at its Hughes Aircraft Co subsidiary.

Net earnings without the special charge were $392 million, compared to a loss of $784.5 million in the second quarter of 1991.

Chairman Robert Stempel cautioned that the uncertainty about the sluggish economy in North America and a slowdown in overseas markets means the second half will be "challenging."

Stempel: challenge ahead

Stempel described results — less the special charge at Hughes — as "GM's best quarterly performance in the past two years."

He said cost reductions and increased sales in the first half helped earnings.

Securities analysts had said the restructuring at Hughes Aircraft, a defense contractor hurt by cutbacks in defense-related orders, was necessary for the overall health of the company.

GM's subsidiaries also helped earnings.

Electronic Data Systems reported second-quarter profits of $157 million due to growth in non-GM business.

GM Hughes Electronics Corp. reported earnings of $164 million, excluding the restructuring charge, and General Motors Acceptance Corp. reported earnings of $287 million.

Second-quarter sales and revenues were $35.2 billion. Outside North America, GM's international operations were healthy. Worldwide factory sales of vehicles totaled 2,033,000 units, 129,000 more than in the second quarter of 1991.

Ford Motor Co. and Chrysler Corp. posted robust earnings for the second quarter two weeks ago, driven by reduced costs and high-margin truck sales.

Chrysler reported earnings of $178 million — its best quarter in two years — due to lower incentive costs and improved sales of minivans, trucks and Jeeps.

Ford posted second-quarter net earnings of $502 million, but officials said the economy is fragile in the United States and its key markets worldwide.

Vehicle production was important to the rise in earnings. Production for the industry rose to 3.2 million units in the second quarter, compared with 2.9 million in 1991. ■

Ford may add incentives to boost U.S.-made Escort

KATHY JACKSON
Staff Reporter

TRAVERSE CITY, Mich. — Ford Motor Co. may put enhanced incentives or additional equipment on Escorts assembled in Wayne, Mich., to try to beef up sales.

Executive Vice President Alexander Trotman says he's concerned that Ford's one-price Escort program has placed Wayne workers on extensive layoffs, because most of the demand under the program has been for the sedan and wagon Escort models assembled in Hermosillo, Mexico.

"This has given us all a headache," said Trotman in an interview following his speech here to the University of Michigan's Automotive Management Briefing seminar. "It's very high on our priority list."

Trotman says he will soon meet with management members of the company's Body and Assembly Division to try to work out a plan to minimize downtime at Wayne.

Jeff Washington, president of UAW Local 900, which represents workers at Wayne, wants the company to retool the plant to produce the popular-selling Escort models and the Mercury Tracer.

The local union planned to protest the situation outside Ford World Headquarters on Aug. 6, but postponed the protest after Ford agreed to address the problem.

Trotman says it is unlikely that Ford will retool the plant, because retooling would take nearly two years and would require a huge investment.

"That would be impractical," he said, "but we've got to find a way to sell what Wayne is making."

Wayne produces the LX two-door and five-door hatchback models, the Pony and the LXE. It produces some wagons but only after Hermosillo meets its production quota on wagons. Hermosillo also produces the Mercury Tracer.

Wayne will be down for 10 weeks through November and has been down nearly 30 weeks since November 1990.

Ford initiated the national one-price program for 1993 LX models in April. Through July 31, Escort sales totaled 158,154 units, up 8.6 percent over the first seven months of 1991. ■

CENSUS

Dealer numbers, profits shrinking

continued from PAGE 1

what keeps the doors open.

Both elements of the dealer population tumbled this year. The Big 3 posted a decline of 179 outlets, and the import-only establishments were down 108.

For the Big 3, Chrysler Corp. lost 106 dealerships; General Motors was down 72, and Ford Motor Co. was the steadiest of the trio with a dip of only 21. That total of 199 was reduced to 179 by a change in the number of intercorporate duals — dealerships that handle cars of two or more of the Big 3 in the same showroom.

In the first half of 1991, the declines were 145 for Chrysler, 125 for GM and 90 for Ford, a net loss of 345 after adjusting for the change in intercorporate duals.

On July 1, the Big 3 had 18,672 car dealerships. Each has other dealers that handle its trucks but do not stock cars. The truck-only points are not included in this mid-year analysis.

The import-only total slipped to 4,904 at midyear, down 104 from 5,012 on Jan. 1. In the first half of 1991, the import-only count increased by 17 outlets.

The 4,904 import dealerships consist of 3,865 exclusives, which handle a single import line and nothing else, and 1,039 duals, which stock two or more import makes but no Big 3 cars. Both totals declined in the first half.

All figures in this article and in the accompanying tables refer to the net change in dealership totals.

MORE LOSSES AHEAD?

What will the second half bring? The total will decline, but picking a number is strictly a crapshoot.

Last year, the first-half dip of 328 outlets escalated to 576 in the second half for a full-year drop of 904. In view of this year's modest gain in sales, the downturn in the third and fourth quarters should be lighter than in 1991.

Turning to franchise totals, the term "yes, but" is important.

Big 3 franchises dipped 310 for the first half. Yes, but 292 of those bit the dust when Chrysler Corp. wiped its TC by Maserati agreements off the books. The sports car had been handled by some Chrysler-brand dealers.

Aside from the TC, the Big 3 cars were down a combined total of 18 franchises for the six months. Gains by Eagle and Saturn made up most of the loss by other makes.

Chrysler, Dodge and Plymouth were off 70 franchises, but Eagle was up 135. Buick, Oldsmobile, Pontiac and Cadillac had a combined loss of 35 franchises; Chevrolet was down 45, and Geo was off 34. But Saturn posted a gain of 48. Ford Motor was steady on the franchise side, just as it was on the dealership side, with a loss of 17 sales agreements.

YUGO, DAIHATSU GONE

The imports were down 400 franchises for the first half. Yes, but 157 of those were Yugo, which departed from the U.S. market in April. And yes, but 153 more were Daihatsu, which announced in February that it will withdraw from the U.S. car wars at the end of the model year.

At midyear, 58 Daihatsu dealers had new cars on hand. When a dealership sells all its new vehicles, it becomes a parts and service outlet. Daihatsu figures to have 200 of the latter on Sept. 30. Yugo and Daihatsu joined Peugeot and Sterling, which left the market in August 1991.

Aside from Yugo and Daihatsu, the surviving imported makes lost 90 franchises in the first half.

Lexus, Subaru, Infiniti, Mitsubishi, Honda and Isuzu reported gains of one to eight franchises. South Korea's Hyundai was the only other imported make to post an upturn. Hyundai was up one.

Japanese makes account for 66 percent of the import-car franchises in the United States. Japanese cars account for 84 percent of the import-badged cars sold in the United States.

Although most of the Japanese-brand dealerships handle cars built by their transplant operations in the United States and Canada, those dealerships are counted under the import banner in the *Automotive News* census.

The Japanese have 3,295 of the 3,865 single-line import dealerships. Honda leads with 800, followed by Toyota, 697; Nissan, 514; and Mitsubishi, 332. Acura, Lexus, Infiniti, Mazda and Subaru have more than 100. BMW and Volvo are the only non-Japanese imports with more than 100 single-line dealerships.

In the *Automotive News* compilation, an exclusive is a dealership that has a stand-alone sales and service facility. All 526 Mitsubishi dealerships have separate showrooms, but about a third share service facilities with another make.

Lexus reports that all its 155 dealers have separate showrooms and service-reception and customer-waiting facilities, although 36 of the outlets share a shop with another make. Mazda listed 217 exclusives among its 907 dealers and said 197 others have separate showrooms.

At the beginning of this year, a foreign car could be purchased at 21,900 of the 23,081 dealerships in the United States — 95 percent.

That is principally because of the captive imports. A captive is a line that is sold only by the Big 3 company or division that imports it. All Chrysler Corp. and all Ford Motor dealerships sell captives. So do all Pontiac dealerships and 89 percent of the Chevrolet dealerships.

Automotive News estimates that 16,016 of the 18,672 Big 3 dealerships carry a captive. The rest of the import sales locations are the import-only dealerships and the domestic duals with independent imports (no captive involved).

R.I. faces clean air crunch

PROVIDENCE, R.I. — State environmental officials are scrambling to meet EPA requirements to reduce smog after bills to regulate auto emissions died in the General Assembly.

Rhode Island has until November to meet EPA guidelines.

The bills would have improved emissions testing of cars, which generate 70 percent of the Providence area's smog.

Missing the deadline could lead to a lawsuit, limits on industrial expansion and reductions in federal highway aid, said a state official.

— The Associated Press

Brazilian firm to build Kia vans

SAO PAULO, Brazil — Korean automaker Kia Motors Corp. has linked with a Brazilian maker of fax machines and jet skis to assemble vans later this year.

The operation will be in the Manaus Free Zone, an industrial complex in the Amazon region that enjoys fiscal incentives to encour-

Kia plans to assemble 1,000 vans this year, according to Julio Albertoni, president of Milmar, Kia's partner. The van will be sold mainly to commercial customers for the equivalent of $16,000, said Albertoni, compared with $23,000 if the vans were imported directly from Korea.

in brief

RECREATIONAL VEHICLES

Ford adds three new converters

Ford Division is adding three firms to its consignment pool: Imperial Industries Inc. in Elkhart, Ind.; Hartland Conversions Inc. in Flint, Mich.; and D'Elegant Inc. in Three Rivers, Mich.

Imperial ranks among Chevrolet's top 10 accounts and also has a consignment pool with GMC Truck, said Andy Troyer, vice president and co-owner.

Hartland Conversions has had a bailment account with Chevrolet since 1988.

D'Elegant has been operation for a year, though its owner, Charley Morse, has extensive experience in van conversions.

He was salesman for the former Bivouac Industries in Vandalia, Mich., and national sales manager for the former Sands Automotive Industries in Three Rivers, Mich.

RV sales enter stable era

RESTON, Va. — The RV industry is entering a new growth phase in which baby boomers will be key buyers, says Richard Curtin, director of the University of Michigan Survey Research Center.

The 45- to 54-year-old segment is projected to grow 22 percent during the next decade.

The segment shows a preference for "car substitutes" and has the highest ownership of vans and trucks, Curtin said.

Converters: Sales hinge on rebates

JOSEPH BOHN

Truck Editor

Incentives will likely be key to how well Big 3 van conversions sell in the 1993 model year, according to converters.

Kevin Slater, vice president of sales at Glaval Inc. in Elkhart, Ind., said the market will likely be able to sustain price increases in the range of 4 to 5 percent, such as those in Ford Motor Co.'s pre-introduction price announcements.

But "if they have a big increase and pull back on incentives, we'll have a real slowdown," Slater said.

Ford added a $1,000 dealer cash incentive for Aug. 1 to Sept. 23 on top of the $1,300 consumer incentive it was offering on van conversions. The dealer incentive covers Econoline E-150 van conversions and E-350 commercial cutaway chassis.

Ford is also giving dealers an extra 90 days free floorplanning on conversion vans through Sept. 23 on top of the normal 60 days free flooring.

With its restyled van and sizeable incentives, Ford's retail sales of van conversions increased 20 percent in June and 30 percent for the first six months of 1992, according to Jerry Mittman, Ford Division RV sales manager.

Dodge has wracked up 25-percent retail sales gains in conversion vans during June and July, said Jim Lynch, special vehicle sales manager. This is despite having a dated, older-style van.

Dodge's retail sales on conversions for seven months of calendar 1992 are up more than 20 percent over last year, Lynch said.

Dodge is producing its current style vans as 1993 models only from July 27 to Dec. 22. It will begin building restyled, 1994 Ram Vans and Wagons on Jan. 15. Dealers will be able to begin selling them on arrival.

Dodge increased the base price of Ram Vans by 4.5 to 5.5 percent for 1993. Its 109-inch B150 Ram Van has a preliminary 1993 price of $14,564, compared to $13,799 for a 1992 model, said Chrysler spokesman Tom Jakobowski.

The B350 Maxi Van with the 127-inch wheelbase has a 1993 model price of $18,051 compared to a former price of $17,266.

Dodge is offering $1,000 consumer rebates on 1992 full-sized van conversions and dealer incentives of up to $2,000 per unit on 1992 and $1,500 per unit on 1993 vans through Sept. 30.

Dodge has assured dealers it would continue supporting conversions with wholesale and retail incentives through December.

Chevrolet is offering $1,000 incentives on conversions from July 17 to Sept. 24 in addition to its $1,300 consumer rebates. During the same time, GMC is offering $750 incentives on conversions to dealers until they hit a set quota and $1,500 per unit thereafter. That is in addition to a previous $1,300 consumer rebate.

No data on van conversion sales were available from Chevrolet.

Vans are high-profit items, particularly for Dodge and GM, which haven't had major chassis changes since the 1970s.

Slater said the Big 3 could stimulate the whole conversion market by taking a little less profit on their van chassis.

During the first two weeks after Chevrolet and GMC Truck Divisions new dealer incentives, Glaval's sales doubled, Slater said.

Slater said each time Detroit raises chassis prices, dealers ask converters to lower their prices.

But the ability of converters to offset Detroit's increases is dwindling, according to William Snook, president of Coachmen Vans Inc. in Elkhart, Ind.

Even if converters cut their margins and scrimp and put lower trim levels into conversion vans, they can't do much to bring prices down, Snook said. "Our portion of the cost of a conversion is becoming miniscule."

Snook said that as the economy comes out of its recession, there is a revival of blue-collar shoppers. They have been largely priced out of conversions, which now list for $22,000 to $24,000, Snook said.

The Chevrolet Astro minivan once sold well to women with children. But its lopsided price compared with a short wheelbase, full-sized Chevrolet G-van conversion has hurt its sales.

Denny Dunfield, general manager of Al Serra Chevrolet in Flint, Mich., said his dealership is advertising short wheelbase G-van conversions for $16,200, compared to $17,600 for its least expensive Astro conversions. The Astro has only a $500 consumer rebate and no dealer cash on it.

Dunfield said Astro sales have slowed steadily over the past two years, but took a noticeable drop this year because of their price disparity with the full-sized van.

The sales slowdown and excess inventory of Astro conversions poses a real problem for dealers and converters.

Glaval has developed a special $1,995 wholesale-priced Astro conversion to help address the problem. The price is close to cost to help move it, Slater said. "Astro desperately needs some additional incentive support." ■

Lenders profit from RV loans, survey finds

RESTON, Va. — A new national survey by the finance committee of the Recreation Vehicle Industry Association shows RV loans to be profitable for lenders.

Some 94 percent of survey respondents said RV loans were as profitable, or more so, than car loans.

Fifty-six percent of respondents said they would increase their RV loan portfolio, said Roger Kirwan, chairman of the RVIA finance committee and president of Ganis Corp. in Newport Beach, Calif.

The 12th annual survey was conducted by RVIA to analyze the scope of activity at banks, savings and loans, finance companies and credit unions during 1991.A total of 303 firms responded to the survey.

Eighty-six percent of the reporting financial institutions provided retail direct loans for RVs. Fifty percent were active in retail indirect loans, and 30 percent provided wholesale loans.

The survey revealed that 35 percent of the wholesale loans were converted to retail loans.

Responses showed that maximum maturities are getting longer.

About 63 percent of direct loans and 67 percent of indirect loans have terms of 10 years or longer.

Regardless of where the purchase is financed, most lenders continue to require a down payment of 10 to 20 percent.

Responding lenders found RV buyers a good credit risk; their loan delinquency rate was a low 1.90 percent in 1991 compared with 2.06 percent in 1990. Repossessions averaged 1.13 percent, with an average recovery of 75 percent of the dollar value of the vehicle. ■

Honda best, Ford 2nd on Fla. lemon index

HELEN KAHN
Senior Correspondent

American Honda Motor Co. Inc. is the best performer in Florida's latest "lemon index," but Ford Motor Co finished a close second in 1991, showing big gains over 1989 and 1990.

The scale is based on cases that were decided in consumers' favor under Florida's Lemon Law Arbitration Program. The index is determined by dividing a manufacturer's share of lemons by its Florida market share.

Honda settled all its lemon cases itself. Since none were brought before Florida's board, it had a perfect score.

Ford lost 10 arbitration cases, or 6 percent of the 165 decided for consumers last year. But since it held 20.7 percent of the Florida market in 1991, it improved its lemon index score to 0.29. Among other companies with more than 3,000 Florida sales, General Motors, Toyota, Mazda and Nissan also had fewer arbitration losses than their market share would suggest.

BMW got the worst rating by generating more than nine times its expected share of lemons. It was followed by Hyundai, Volkswagen, Mercedes-Benz and Volvo.

During 1991, the state approved 764 cases for its arbitration program, up from 726 in 1990. Of the 764:

- 71.1 percent (543 consumers) were awarded refunds or replacement vehicles.
- Fewer than half of the cases (298) went to arbitration. Consumers won in 165 cases, with awards adding up to more than $4 million.
- Manufacturers chose to settle 378 cases before arbitration. Settlements totaled more than $7 million and represented 49.5 percent of the cases, up from 41.6 percent in 1990.

The 543 settlements and awards added up to $11,645,821.

FLORIDA LEMON INDEX

Expected index score, based on registrations, would be 1.00.

Maker	1991	1990
Honda	0.00	0.53
Ford	0.29	1.01
General Motors	0.50	0.37
Toyota	0.70	0.57
Mazda	0.95	1.00
Nissan	0.97	1.43
Subaru	1.10	3.12
Chrysler	1.56	1.71
Mitsubishi	2.39	0.68
Isuzu	2.83	1.58
Volvo	3.32	1.47
Mercedes-Benz	3.63	1.67
Volkswagen	5.41	0.00
Hyundai	7.34	10.45
BMW	9.32	2.86

Source: Florida Lemon Law Arbitration Program

$186,278 MERCEDES LEMON ➤ 31

Of the remaining 221 approved cases, 41 were withdrawn, and 45 were settled for less value than provided by the lemon law. Two settlements weren't disclosed, and 133 cases were dismissed.

Some companies have their own arbitration programs that are certified by Florida; others do not.

During 1991, Porsche applied to certify its Autosolve program, which is administered by the American Automobile Association. Florida hasn't decided. Eight manufacturers, which account for more than three-fourths of Florida sales, had their informal dispute settlement mechanisms recertified. They are Ford, General Motors, Honda, Nissan, Rolls-Royce, Saab, Toyota and Volkswagen. Florida has not certified the Chrysler program.

Attorney General Robert A. Butterworth points to two other indicators of manufacturer performance in addition to the lemon index: the "case approval index" and the lemon law settlement rate.

The companies that did well in those areas generated fewer cases and fewer "lemons" than their expected share or settled in full a large percentage of their cases.

Seven manufacturers generated more cases than their expected shares: Hyundai (more than 12 times higher than expected); BMW (three times higher); Volvo (more than three times); Chrysler and VW (more than twice as high); Isuzu (almost 1½ times); and Ford (1.25).

Honda, Toyota, GM, Nissan, Subaru, Mercedes-Benz, Mitsubishi and Mazda had fewer cases than expected. ■

Chrysler heads back to Brazil

SAO PAULO, Brazil — After a 13-year absence, Chrysler Corp. is returning to Brazil. But unlike last time, the company will be an importer only.

The company has struck a deal with Sao Paulo-based Industrias Sao Jorge, which will serve as importer and represent Chrysler in creating a dealer network.

When Chrysler stopped building cars and trucks in Brazil in 1979, it sold its operations and the right to use its name to Volkswagen do Brasil. A spokesman for that company said there could be legal problems if Chrysler uses its name.

The first 21 cars are due to arrive next month,according to Luis Fernando Berea, Sao Jorge's general manager.

— Rik Turner

*Estimated †Breakdown of North American built and imported car sales not available.
There were 8 selling days in the period this year and 9 last year.

Mid-July vehicle sales up 8.6%; trucks strong

KAREN DETKOWSKI
Staff Statistician

U.S. vehicle sales in mid-July were up 8.6 percent from the year-ago period on the basis of the daily selling rate.

There were eight selling days in the period this year, compared with nine last year.

Comparisons in this report are based on the change in the daily rate.

Sales in the second 10 days of July increased 14.6 percent over early July.

Total car sales in the United States rose 4.8 percent above last year's rate.

Domestics were up 4.1 percent; imports rose 7.0 percent.

Automotive News estimates sales for all importers other than Toyota, Nissan and Honda, which report actual sales.

Light-truck sales were up 15.8 percent in mid-July.

Domestic truckmakers dominated with a 22.7 percent increase; importers trailed last year by 17.5 percent.

General Motors reported a daily-rate increase of 6.3 percent over 1991, with 130,862 units delivered in this year's eight-day selling period.

Trucks highlighted GM's gain. Sales were up in both year-to-year and daily-selling-rate calculations.

Automotive News estimates that Chrysler Corp.'s mid-month sales climbed 25.1 percent above 1991. Domestic trucks were up 28.6 percent.

Chrysler does not issue 10-day sales reports.

Ford Motor Co.'s sales advanced 10.7 percent over mid-July 1991. As with GM and Chrysler, trucks led the way with a gain of 18.8 percent. ■

Canada sales drop again

ANNE E. WRIGHT
Chief Statistician

Sales of cars and light trucks in Canada continued to lose steam in July as the market dropped for the fourth consecutive month.

Car sales in July totaled 73,613, off 12.5 percent from the year-ago month. Truck sales were 35,450, down 8.1 percent. The combined total dipped 11.1 percent.

For seven months, total light-vehicle sales were off 8.6 percent. Cars sales slid 11.2 percent, and trucks dipped 3.1 percent from the same period one year ago.

Chrysler Canada truck sales in July fell 19.1 percent, the first monthly decline in 1992. For the year, Chrysler's truck sales were 6.3 percent ahead of 1991.

Chrysler's car sales were off 31.0 percent for the month and 19.0 percent for the year.

Ford Motor Co. of Canada's July performance mimicked that of Chrysler with declines in both car and truck sales. Year-to-date truck sales were barely ahead of 1991.

General Motors' sales for the month were off 8.2 percent from last year. Year-to-date car sales were down 12.6 percent and trucks were off 8.2 percent, leaving the company 11.2 percent below 1991.

Manufacturers reporting increases for July included Mazda, 43.3 percent; Mercedes-Benz, 22.8 percent; and Toyota, 10.3 percent. ■

GM readies credit card program

DETROIT — General Motors will unveil as early as September its long-awaited general-purpose credit card program that offers a discount on a new GM vehicle, a company executive has confirmed.

The blue-and-white card, available as either Visa or MasterCard, carries GM's logo and will be issued by Household Bank. The card was delayed when the original issuer, Bank One, withdrew earlier this year.

The card will credit as much as 5 percent of a customer's annual purchases toward a new GM car or truck.

Florida tourists are first to put LH cars to the test

Close watch kept on rental fleets

RICHARD TRUETT
Special Correspondent

Some of the first production Eagle Visions went to rental fleets in Florida.

ORLANDO, Fla. — The temperature is in the upper 90s most days, and traffic near Walt Disney World and other popular destinations is lined up bumper-to-bumper because of the flood of tourists who bought cut-rate airline tickets.

That is the environment in which the first of about 800 Eagle Vision and Dodge Intrepid sedans have landed.

Chrysler Corp. wants to know how well its new LH cars will hold up under tough conditions. The cars sentenced to a six-month test in the Orlando rental fleets of General Rent-A-Car and Dollar Rent A Car, both owned by Chrysler, probably will take a pretty good pounding. Another 200 or so are in Denver for altitude testing.

Early results in Orlando appear promising. During the last week of July, the first full week the cars were available in volume, Dollar and General rented 400 Visions.

The rental companies said no vehicle-stopping problems were reported. Service managers at several central Florida Chrysler dealerships also said no LH cars were brought in because of mechanical failures.

"So far, so good. We've had no breakdowns. We've heard nothing but good," said Jerry Slynn, service manager at Dollar's Orlando airport facility.

Larry Nieves, General's Orlando city manager, also said the vehicles have performed well. He said tourists have praised the cars' room, handling and especially the air conditioners, Chrysler's first chlorofluorocarbon-free system.

However, Chrysler may be sorting out a few minor last-minute bugs before the cars are officially introduced Nov. 1.

A team of engineers working one blistering afternoon last week at the General Rent-A-Car facility near Orlando International Airport said they spotted a few minor fit and finish problems. A suspension engineer said Chrysler may be looking at ways to reduce road noise by modifying the rear shock mounts. There may also be some fine-tuning of the computerized transmission's shift timing.

In Detroit, Chrysler spokesman Tom Jakobowski was quick to downplay the significance of this first real-world test of the LH. He called it just a routine "field test."

But it is more than that. The engineers working out of Chrysler's Orlando zone office have the authority to put the brakes on the LH if they find any major problems. One call could stop the production line.

"We will close that plant down in a second if we feel that we are not at the quality level we need," said Chrysler spokesman Jason Vines.

The LH's four-speed electronic transmission is a distant relative of the troublesome A-604, but Glenn Gardner, LH team leader and general manager of Chrysler's large-car platform engineering team, said no major problems have been reported.

However, he said some last-minute changes were made in the transmission's software, and engineers are still evaluating the timing of the shifts under different throttle positions.

"We have been constantly making improvements in the transmission over the last two months. We are tweaking it to get to an absolute state of superior finesse," Gardner said.

He said Chrysler hopes to gather some crash data on the cars in Orlando. "We don't want any accidents, but Florida is known in certain circles to have many accidents," he said. "We are anxious, should any accidents occur, to know how our dual airbags perform in real-world tests."

Gardner said Chrysler will also take a close look at how well the LH's air conditioner performs.

"The summer environment is hot and humid," he said. "We think we have engineered the world's best air conditioner in this car. We said, 'Let tourists load it with people and have them test it.' "

Gardner said production at the Bramalea, Ontario, plant is up to about 150 cars per day and the plant is on schedule. Production began June 30.

While the Vision and Intrepid are in Orlando, Chrysler engineers will pull cars from the rental car fleet at random for durability checks that may involve taking apart engines, transmissions and other components.

"The launch will be very slow," Gardner said. "It won't accelerate very rapidly. That will give us more opportunities to catch any problems and fix them before too many cars get out in the field." ■

New MG sparks interest in U.S.

ED WENDT
Staff Correspondent

LONDON — Sterling Motor Cars may be gone from U.S. sales shores, but there's still a bit of demand for its products.

Denis Chick, product manager for British parent Rover Group, says the company has received several inquiries from U.S. consumers about the special edition MG RV8, which will be introduced at October's British Motor Show in Birmingham. Sterling executives had been pushing Rover to build an MG before Rover pulled the plug on its U.S. sales arm a year ago.

U.S. enthusiasts dead set on obtaining one of the special MGs can purchase it through a British dealer.

But Chick's invitation carries a warning.

"You are very welcome to buy one from a British dealer," he says. "But when you walk out of the door, you have no warranty coverage at all because the car is not designed to go into your market."

He also notes that the MG "is not engineered for America, the emissions controls are European and not federal, and the body shell and vehicle do not comply with federal safety standards."

EPA rules prohibit individuals from importing cars that do not meet U.S. safety and emission regulations.

The special edition will commemorate the 30th anniversary of the beloved British sports car, produced from 1962 to 1980.

Rover will build 15 a week. Chick estimates that production will continue for up to three years.

It will feature a 3.9-liter V-8, with an output of 188 horsepower. It will go from 0 mph to 60 mph in less than six seconds, with a top speed of about 134 mph.

The car will go on sale in December and retail for £24,500, the equivalent of about $46,730. ■

Audi positioned for comeback

Maker pins fortunes on revamped lineup

ARLENA SAWYERS
Staff Reporter

CHICAGO — Pointing to the positive results of a recent consumer survey, a revamped product line and a lean dealer body, Audi is poised for a comeback in the United States, said Richard Mugg.

Mugg, vice president of Volkswagen of America Inc. in charge of Audi of America Inc., said the company is studying the possibility of producing vehicles — perhaps smaller than those currently offered by Audi — in the United States, but added that there "are no concrete plans" to do so.

Still, he admits that additional production capacity would be necessary if Audi reclaims its place as a heavyweight in the U.S. luxury car market. Audi's two plants in Germany currently have two shifts to help meet international demands, he said.

"If (Audi) wants to grow in the United States they're going to have to have additional production capacity," said Mugg. "They recognize that and are studying the problem.

"This is all extremely speculative . . . there are always studies. There is a desire on Audi's part to regain its prominence in the U.S. market."

At its peak in 1985, Audi sold 74,000 vehicles in the United States. Plagued by accusations of sudden acceleration, sales plunged in the late 1980s.

While the company was eventually cleared of all fault, a marred reputation, a poor economy and increased competition in the luxury-car segment prevented a sales recovery. Audi sold 12,283 cars in calendar 1991, down from 21,106 in 1990.

In an effort to bolster sales, the company replaced most of its product line. The all-new 1992 Audi 100 was introduced last fall followed by the 1992 S4 in May, which replaced the 200, and the 1993 Audi 90 in July. Mugg said Audi expects to sell 17,000 vehicles in calendar 1992 and about 22,000 to 23,000 in 1993.

In the last two years, Audi pared its dealer body to 309, down from a peak of 400.

The dealers, Mugg said, "are somewhat frustrated. They see the product, they see the potential."

Mugg said the J.D. Power and Associates 1991 Image Nameplate Study, a consumer survey that indicates how nameplates are perceived, confirms what Audi and its dealers already knew.

He said consumers perceive Audi as more comfortable than BMW, sportier than Mercedes-Benz and Lexus and more luxurious than Acura.

"That tells us that Audi is perceived as a superbly balanced, value-laden automobile that matches its competitors without being extreme in any one attribute," he said.

Mugg declined to detail Audi's budget, but said the company is using databased marketing, cable TV, newspaper and radio to market the revamped product line.

He said, "We will increase our spending as we increase our volume in a steady, systematic way."

GM suppliers voice concerns at conference

continued from PAGE 1

- One supplier said GM took the supplier's blueprints for a part that had taken the supplier 10 years to develop and then sent the prints out to the supplier's competitors for bids.
- Another supplier said it had received calls from GM purchasing people asking it to bid on a component that the supplier was obviously not equipped to build.

When the supplier asked the purchasing agent why the supplier was being called, the purchasing agent apologized and said he had been instructed to get more than 10 bids for the component.

- A small supplier said it was trying to sort through bidding on nearly two dozen GM projects at the same time — including five contracts that the supplier already holds with the automaker.

That supplier said GM is now using a two-round bidding system. After the first round, GM takes the lowest bid and allows a handful of low bidders to try to beat that bid.

In the face of that criticism, conference attendee William Hoglund, GM executive vice president, defended Lopez and his tactics.

"There's going to be change inside of GM and outside," said Hoglund. "Things will be different for you. It's going to change, it's going to get tougher, but GM and its suppliers will both win over the long term."

Hoglund said Lopez can repeat the successes he scored in Europe, where he reduced GM Automotive Component Group labor costs by 64 percent, plant space by 40 percent and production lead time by 75 percent.

Hoglund said the Lopez-led teams "are loaded with manufacturing-engineering expertise, and provide damn good input to GM manufacturing people."

In recent years, GM "lost a lot of expertise in manufacturing," he said. The application of creative engineering to the shop floor is missing.

Also at the seminar was Donald Runkle, vice president of advanced engineering for GM. He believes matters related to Lopez "are being misconstrued."

Said Runkle, "There is a three-legged stool of quality, service and price. There's too much attention being placed on price."

He said the hubbub over Lopez "is mostly the substantial change that is now occurring. It takes a while to settle the waves down."

Runkle said GM's main problem now is that GM's purchasing has been centralized (the entire purchasing organization reports only to Lopez), while GM engineering operations are decentralized.

"That's the problem we're debating right now," Runkle said. "The centralized purchasing activity has caused confusion internally."

Runkle said he expects it will "be worked out within six months."

One of the more outspoken critics of the new regime was Gerald Jusco, ITT Automotive vice president of corporate and industry relations.

Jusco insists that the big suppliers already have squeezed prices and know how to be competitive without being told, adding that he has requested that GM honor its contract.

He said GM is trying to mandate change but is unwilling to make it a two-way street.

Jusco said there needs to be a dialogue between GM and its largest suppliers to find a solution.

He said several suppliers are talking about a plan in which the chief executive officer and perhaps another official from each of the 10 largest suppliers would sit down with Lopez and a handful of his staff to discuss how to reduce GM and supplier costs.

"We can't afford to go back to a 1970s mentality where price is the reason for supplier selection, because what eventually will happen is many suppliers will go out of business," Jusco said. "This has got to be straightened out very quickly."

Ford, Chrysler react to Lopez

AL FLEMING
Industry Editor

TRAVERSE CITY, Mich. — How do the top purchasing executives of Ford Motor Co. and Chrysler Corp. react to General Motors' J. Ignacio Lopez?

"As of now, Mr. Lopez is not causing us great concern," said Norman Ehlers, Ford's purchasing vice president.

"But should GM as a result of Mr. Lopez's programs claim that it is saving millions and millions of dollars by taking large costs out of suppliers, there will be a lot of rethinking by Ford and Chrysler to do the same thing," Ehlers said.

"We would prefer to concentrate on working with suppliers to reduce costs and improve efficiencies, and not upset the fruit basket by opening up contracts and rebidding," he said.

Thomas Stallkamp, Chrysler's vice president of procurement and supply, in an obvious reference to GM rebidding tactics, said Chrysler is empowering suppliers by signing multi-year contracts with them — from three to five years, and in some cases, for the life of the vehicle.

This replaces the annual bidding process, Stallkamp said. "Without long-term relationships, suppliers operate with less certainty. Instead, they can plan for the future and make intelligent capital investments. As far as we're concerned, these long-term agreements mean that it is their business to lose."

Stallkamp said Chrysler also tries to keep written contracts as simple as possible. "That means plain English, with as little legal jargon as we can get away with — and our lawyers are actually cooperating."

Stallkamp said Chrysler's SCORE (supplier cost-reduction) program, launched in 1989, has saved Chrysler $161 million to date.

Industry abuzz over changes

GM's new purchasing regime was such a hot topic that almost everyone had something to say:

- **Ralph Reins,** president of Allied-Signal Automotive: "We like what Mr. Lopez is doing in Europe, he didn't give GM's captive component suppliers a nickel's advantage over outside sources. It was straight competition. We're going head-to-head with several GM component divisions and we expect to get business on a even playing field."
- **John Spoelhof,** president of Prince Corp.: "Things are tough. Tough enough to think fondly about the good old days of 3-2-2."
- **Heinz Prechter,** chairman of ASC Inc.: "We've got a pile of contracts two-feet high from GM that we are looking at. We expect to get new business."
- **Lee Iacocca,** chairman of Chrysler Corp.: "I don't know Lopez. I hear about this dichotomy (between Lopez and suppliers). He wants lower costs and he sends out letters. What counts is how you get lower costs. You can't mandate them and say, 'Gimme 3 percent; I'll see you later.' "
- **Materials supplier:** "Our company has limited resources to invest in automotive product development and technology. We can spread it only so far among automotive customers. We may decide to withdraw from GM and focus on Ford, Chrysler and others."
- **Clinton Lauer,** retired purchasing vice president at Ford Motor Co.: "He (Lopez) has got the right idea but he's going about it the wrong way. Generally, suppliers who have contracts now have demonstrated that they are the best suppliers. In rebidding, a lot of old losers and low bidders may get new contracts, for a year, until they demonstrate their incapability. That could hurt not only GM, but Ford and Chrysler, because they may be led back into the 1970s low-bidder mentality."

NADA

More used than new sold in '91

continued from PAGE 3

Two years ago, franchised dealers sold more used vehicles than new for the first time since World War II. It happened again in 1991, and NADA says the trend will continue.

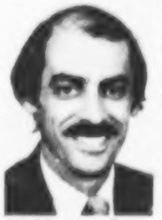
And more troubling to dealers, the gap between new-vehicle sales and used-vehicle sales has widened, according to the study.

Dealers sold 12.3 million new cars and trucks and 14.2 million used vehicles in 1991, compared to sales of 13.9 million new and 14.3 million used vehicles in 1990, according to the study.

Sales of used cars were partially driven by the popular program cars — nearly new vehicles repurchased from daily rental companies by automakers and redistributed to dealers at auctions. Program-car sales are estimated at 1.3 million for the 1992 model year.

But automakers are cutting back on fleet volume as new-car sales improve. Chrysler Corp., for example, is expected to reduce its program-car volume to 150,000 vehicles in the 1993 model year from 210,000 in the 1992 model year. General Motors' program car volume is expected to fall to 500,000 in the 1993 model year from an estimated 700,000 in 1992.

"We believe 1991 is the trough in the auto industry's latest downturn," said Tom Webb, NADA's chief economist. "A slow rebuilding is under way."



Webb: sees slow rebuilding

He said dealerships are more efficient now than ever before, service work has taken on additional importance and the dealer's ability to satisfy customers is better than ever.

Despite new-car department losses, dealers still know how to spend. Total dealership expenditures for 1991 included payrolls of $23.5 billion, advertising costs of $3.5 billion, rent of $3.7 billion and floorplan interest on their cars of $2.1 billion.

Used-vehicle dollar sales rose 3 percent in 1991. Service and parts sales rose only 2.5 percent last year compared to 5 percent in 1990.

A decade has wrought dramatic change in dealerships: small mom-and-pop shops are becoming an endangered species.

In 1981, nearly 10,000 dealerships sold fewer than 150 new units. Today, there are fewer than 6,000 such dealerships. In contrast, 5,200 dealerships sell more than 750 units today, compared to 3,650 at that volume in 1981.

Of the 14.2 million used vehicles sold by auto dealers in 1991, 8.8 million were retailed and 5.4 million were wholesaled. Dealers obtained 65 percent of used units retailed from trade-ins and a record of 28 percent from auctions.

The used-vehicle department accounted for nearly 25 percent of the average dealership's total sales volume in 1991. Parts and service accounted for 15.6 percent of the average dealership's total sales last year.

Service is the watchword: The average service department is open 48 hours per week, and 44 percent of dealers have instituted either evening or weekend service hours.

U.S. CAR AND LIGHT-TRUCK SALES, JULY — 1992 vs. 1991 (ranked by car and light-truck total sales)

SALES

Big 3 trucks strong, but July dips 2.4%

continued from PAGE 3

first seven months of this year.

Light-truck sales climbed to 404,981 in July, 3.0 percent ahead of the year-ago month.

Chrysler Corp. truck sales jumped 6.8 percent. The new Grand Cherokee, the only Jeep line with no incentive on it, made up more than one-third of Jeep sales, compared with less than 3 percent for the 1991 model it replaced. Jeep sales increased 12.8 percent overall.

Dodge and Plymouth minivans slid a bit for the month, but they're still far ahead of seven-month sales a year ago.

Chrysler car-truck sales improved 7.2 percent over a poor year-ago month. Chrysler-brand sales zoomed up 33.6 percent, but that's compared with a year-ago month that was down 51.7 percent from 1990.

General Motors sales fell 6.0 percent overall, despite a 6.4 percent improvement in light trucks. The Pontiac Trans Sport is the only one of GM's plastic-bodied minivans to show an increase this year. The Oldsmobile Silhouette and the Chevrolet Lumina were down sharply in July and also are down for the year to date.

GMC Truck and Saturn were the only GM divisions that posted a gain over the year-ago month.

Ford Motor Co. sales were up 5.5 percent, with a 7.8 percent improvement in trucks and a 3.8 percent hike in cars. The Taurus continues to battle the Honda Accord for first place in car sales, but the Accord fattened its lead in July by outselling the Taurus by 6,550 units. The Accord is 17,040 ahead for the year.

"Honda has demonstrated a willingness to spend quite heavily on marketing support," said Joel Pitcoff, Ford's research and analysis manager. "Accordingly, we should be cautious about predicting a Taurus victory by year-end."

In July, the 1992 Accord had dealer incentives of $200 to $1,500, based on performance against quota. Ford has customer incentives of $1,000 on the Taurus SHO and regional rebates of $750 to $1,000 on other Taurus models. SHO demonstrators also carry a $2,000 rebate to dealers.

Sales of American Honda Motor Co. Inc. were up 0.3 percent for the month, despite a 31.2 percent plunge for the Acura. After seven months, Acura sales were down 13.5 percent.

Toyota Motor Sales U.S.A. Inc. was off 6.4 percent compared with a strong year-ago month. Lexus sales rose 16.9 percent, but Toyota car sales were down 10.5 percent.

Nissan Motor Corp. in U.S.A. suffered a 30.3 percent drop in sales compared with a strong year-ago month that was fueled by incentives. Nissan Division added an array of dealer incentives in late July.

Sales slump resumes in Japan

MARY ANN MASKERY

Staff Reporter

TOKYO — July sales of cars and trucks in Japan were down 5.6 percent to 541,599, continuing the downward trend after a slight upturn in June.

Analysts now believe the industry is likely to post a second consecutive year-to-year decline, something that did not happen even during the oil shocks of the 1970s.

July sales returned to the pattern of earlier months, said Keith Donaldson of Salomon Brothers — an average decline of 5 percent, following the 0.5 percent blip of growth in June.

"July was in line with what should have been expected, but people were unjustifiably excited by June," he said.

Sales of cars and trucks for the first seven months of this year totaled 3.3 million, down 4.9 percent from 1991.

In July, sales of cars over 2.0 liters, the one segment that has shown consistently strong growth since 1989, rose 2.1 percent to 71,150. In stronger days, that class showed year-to-year gains of 45 and 50 percent.

"There may still be some growth in the segment," Donaldson said, "but the top end is weak. Most of the expansion in the last year was supported by the move from 2.0-liter to 2.5-liter engines."

Celsior (Lexus) and Infiniti reflected the softness of the luxury sector, with Celsior sales at 1,755 units, down 52.1 percent from 1991, and the Infiniti Q45 at 151, down 38.6 percent.

Small-car sales, the bulk of the market, continued to decline. They were down 8.7 percent in July to 311,105.

Large-truck sales were down 26.1 percent to 11,023. Small-truck deliveries, buoyed by steady sales of RVs, were off only 0.1 percent.

Mitsubishi Motors Corp. and Suzuki Motor Co. were the only gainers in July, and both had strong RV sales.

Mitsubishi was up 9.0 percent to 50,239, with the Pajero (Montero), its lead seller, up 59 percent to 8,632.

Suzuki was up 24.6 percent to 4,902, compared with a weak showing the previous year. Its big seller in July was the Escudo (Sidekick/Geo Tracker), up 16.2 percent to 2,874.

Four companies posted double-digit declines: Mazda Motor Corp., down 17.9 percent to 40,000; Honda Motor Co., down 12.6 percent to 35,261; Isuzu Motors Ltd., down 15.5 percent to 14,568; and Daihatsu Motor Co., down 19.2 percent to 2,482.

Toyota Motor Corp. and Nissan Motor Co. Ltd. reported lesser losses. Toyota sales declined 2.5 percent to 227,163 in July, and Nissan dropped 8.1 percent to 130,430.

Sales of mini vehicles (under 660 cc) continued their sharp decline, down 10.1 percent to 143,982.

Imports fell 6.2 percent to 18,306, with Volkswagen a notable exception.

VW sales reversed what had been a steady decline, rising 8.5 percent to 3,607, largely because right-hand-drive Golfs were available after a several-month delay in delivery.

Sales of Audi, BMW and Mercedes-Benz declined, as did big-ticket models throughout the market.

Audi was down 33.6 percent to 1,121; BMW dipped 16.7 percent to 2,402; and Mercedes-Benz was off 19.8 percent to 2,356.

General Motors sales continued their decline of the last few months after a strong showing for the better part of a year. GM's July deliveries totaled 848, down 8.7 percent from 1991.

But Ford Motor Co. was up 11 percent to 363, and Chrysler Corp. rose 54.8 percent to 195.

Honda remained the top seller of American-made cars with 2,516, up 83.9 percent. ■

5 imports post new rebates for cleanup days

incentive WATCH

ARLENA SAWYERS
Staff Reporter

Toyota, Honda, Mitsubishi, Subaru and Suzuki are trying to help dealers clear out 1991 and 1992 models with new incentive and/or lease plans.

Chrysler Corp. is paying dealer rebates on 1991 and 1992 Chrysler Imperial and New Yorker models, and Ford Motor disclosed a bunch of customer incentives on 1991 models to go along with payments on 1993s and 1992s.

Toyota Motor Sales U.S.A. Inc. is paying dealer incentives on 1992 Corollas and 1991 and 1992 Tercels, Celicas and pickups. Car incentives range from $200 to $1,000; truck incentives are $300 to $1,000. Payment amounts are based on the dealer's performance against quota. Toyota's program expires Sept. 2.

American Honda Motor Co. Inc. is offering dealer incentives of $500 on the 1992 Accord and $400 on the 1992 Civic until Sept. 30.

Mitsubishi Motor Sales of America dealers are eligible for incentives based on combined sales of the 1992 Eclipse and sales and leases of the 1992 Expo, excluding the Expo LRV. Beginning with the sixth sale or lease, dealers earn $500; the payments increase incrementally to $1,200 with the 51st unit. The $1,200 payment is retroactive to the 26th unit.

Also, Mitsubishi dealers may choose a cash rebate on either the 1992 Galant or pickup. Beginning with the sixth sale, dealers earn $500; the payments increase incrementally to $1,200 with the 51st sale. This program expires on Sept. 30.

Special lease plans are being offered to Mitsubishi customers through August.

Under its Triple Diamond Lease program, Mitsubishi is continuing its $500 down/$149-a-month, five-year offer on the 1991 and 1992 base Eclipse. Eclipses leased under this program are not eligible for dealer incentives. A luxury lease program offers the 1992 Diamante LS, 3000GT SL and Montero SR for $1,000 down and $399 a month for up to 36 months.

Subaru of America Inc.'s dealer incentive program pays $800 on the 1992 Loyale all-wheel-drive wagon and $500 to $3,000 on the 1992 Legacy. The amount of the Legacy rebate is tied to trim level, whether it was invoiced before or after Feb. 4 and whether it has an airbag.

On the 1992 SVX, the dealer may choose a $2,000 incentive or lease the vehicle at $399 a month for 48 months. Subaru's program expires Nov. 3.

American Suzuki Motor Corp.'s dealer incentives are $500 to $1,000 on the 1992 Swift; $300 to $500 on the 1993 Swift; $700 to $1,000 on the 1992 Sidekick; and $300 to $600 on the 1993 Sidekick. The program expires Oct. 2.

Through the end of August, **Chrysler** is paying rebates of $1,000 to $2,000 to dealers on the 1991 and 1992 Chrysler New Yorker Fifth Avenue, New Yorker Salon and Imperial. The payments are based on performance against quota.

Until Sept. 23, **Ford Motor** is offering rebates of $400 to $2,000 to buyers of 1991 Ford and Mercury cars and Ford trucks.

505	$6,000

Britain considers tax hike on company cars

ED WENDT
Staff Correspondent

LONDON — A new income tax proposal by the British government would make it more expensive for employees who drive expensive company cars.

Some industry officials believe the proposal will maim or kill the remaining British luxury car makers.

The government proposal is significant because more than half of the cars in Britain are company-owned and driven by employees as part of their compensation, for which they pay income tax.

Chancellor of the Exchequer Norman Lamont plans to replace the current system, which is based primarily on engine size, with one based solely on price.

Company cars are currently taxed on a fixed value determined by the vehicle's place in one of five bands, or ranges of engine size within a particular price range.

Under the proposed system, which will come before Parliament for approval in 1993, taxes on Jaguars, Mercedes, BMWs and top-of-the range Rovers would go up by 40 percent. Owners of Rolls-Royces and Porsches would pay 35 percent more tax.

The owners of smaller, less expensive, more fuel-efficient models such as the Ford Sierra and the Vauxhall Cavalier, will pay 10 percent less tax.

Leading auto industry groups welcomed the government's decision to reform the company system, but are not satisfied with the new proposal. Most seem to favor a system based on a car's actual price, not a system of price ranges.

"We are extremely concerned about drivers of mid-range executive cars who may face an increase in their taxation of as much as 40 percent," said a spokesman for the Society of Motor Manufacturers and Traders. "This factor will cause market distortion."

Jaguar Cars Ltd., already suffering from a severe decline in world car sales, criticized the price banding proposal.

"We support the view that a company car driver's tax liability should be based on a straightforward percentage of the vehicle's retail price," said Jaguar Cars Ltd. product manager Joe Greenwell.

He said that under the proposal, "Some of our customers will win and some will lose."

Graham Sayles, financial analyst for Ludvigsen Associates, accused the government of using the environment as a "smoke screen" to push through the new tax scheme.

"They are trying to persuade people to drive cars that use less petrol," said Sayles. "That is a lot of rubbish."

"It is not the job of the Treasury to try and guide the consumer," he said.

Sayles warned that the proposal, if implemented, "will kill off the remaining luxury car makers in the United Kingdom. It is going to be terrible news for Rolls-Royce and Jaguar."

Navajo and pickup rebates vary by model and region.	

Ferrari names new U.S. chief

ENGLEWOOD CLIFFS, N.J. — Gian Luigi Longinotti Buitoni has joined Ferrari North America Inc. as president and chief executive officer, replacing Giuseppe Greco effective Aug. 1.

Greco, who took over the U.S. sales and marketing arm in 1989, has returned to parent company Ferrari S.p.A. in Italy.

Greco was previously president and chief executive officer of the former Alfa Romeo Inc.

CHRYSLER

Kerkorian wants a seat on board

continued from PAGE 1

Kerkorian, holder of 9.8 percent of Chrysler stock, said in a letter attached to a filing with the Securities and Exchange Commission Friday that he is concerned about Iacocca's "continued leadership role" in the company.

Kerkorian's letter did not specify if he was referring to Iacocca's planned retirement and the company's selection of Robert Eaton as chairman-designate.

Nor did the letter specify if Kerkorian was unhappy with Iacocca, whom the letter said had promised Kerkorian he wouldn't retire as chairman until 1994.

Regardless, Kerkorian seems convinced that shareholders now need strengthened representation on the board of directors.

At the very least, he wants to know Iacocca's future role in the company.

Kerkorian and officials from his Trascinda Corp., based in Beverly Hills, Calif., were unavailable for comment.

Kerkorian sent shivers throughout the corporation in 1990 when he acquired more than 9 percent of Chrysler outstanding shares for $300 million.

But he remained a passive investor "based in great part on Mr. Iacocca's leadership and his continuing efforts to run the company in the best interests of the shareholders."

In the letter, Kerkorian said he trusted Iacocca so completely that he was even willing to give him his proxy to vote his shares as Iacocca sees fit.

Iacocca said Friday that Chrysler will meet with Kerkorian's representatives in the near future, but that his plans for retirement are unchanged.

Iacocca said he has confidence in Chrysler's management team.

When Kerkorian acquired the shares of Chrysler stock, the company moved quickly to bolster its "poison pill" provision to protect shareholders from unwelcome suitors. But Kerkorian stuck to his word, saying that he was only a passive investor who liked Iacocca's management style. ■

GM back; output up 47%

GWENDOLYN ZONGHETTI
Special Correspondent

Twenty-nine of General Motors' 31 assembly plants returned from vacation last week, raising car and truck production in the United States and Canada 47.7 percent over the prior week.

The Willow Run, Mich., and Doraville, Ga., facilities remain idle because of high inventories.

GM's Wentzville, Mo., plant returned to work with one shift last week instead of its usual two. The second shift will return Aug. 24.

Last week's estimated car production in the United States was 89,903, up 43.9 percent over the prior week and 3.2 percent over the year-ago week.

Year-to-date U.S.car production is 3,392,056, a 4.6 percent jump above 1991.

Car production in Canada last week was estimated at 21,190. It rose 45.9 percent from the prior week and 31.7 percent over the year-ago week.

Canadian automakers have assembled 627,642 cars this year, down 3.1 percent from the same period in 1991.

In the United States last week, 74,312 trucks were built, up 38.9 percent over the prior week and 39.0 percent over the year-ago week.

Truckmakers in the United States have assembled 2,331,100 vehicles this year, an increase of 18.6 percent over 1991.

Truck production in Canada last week was scheduled at 18,004, an increase of 148.8 percent over the prior week and 34.0 percent over the year-ago week.

In 1992, Canadian truckmakers have produced 603,892 vehicles, up 24.4 percent over 1991.

Last week's estimated daily build rate of cars and trucks in the United States and Canada was 40,682, up 47.7 percent over the prior week and 19.4 percent above the year-ago week.

Last week's scheduled car and truck production was shared as follows: GM, 35.6 percent; Ford Motor Co., 23.9 percent; Chrysler Corp., 16.2 percent; Honda of America Manufacturing Inc., 5.4 percent; Nissan Motor Manufacturing Corp. U.S.A., 3.6 percent; New United Motor Manufacturing Inc., 3.6 percent; AutoAlliance International Inc., 3.5 percent; Toyota Motor Manufacturing (U.S.A.), 3.0 percent; Subaru-Isuzu Automotive Inc., 1.6 percent; Diamond-Star Motors Corp., 1.3 percent; miscellaneous, 1.2 percent; Navistar International Corp., 0.9 percent; and AM General, 0.2 percent.

Ford said it will increase production of the Aerostar minivan by 25 percent at the St. Louis plant. From Aug. 24 through October, the plant will build 1,000 a day instead of 800, and the accelerated schedule may continue beyond October if market demand warrants.

The Aerostar plant will work daily overtime. Ford plans two 10-hour shifts Monday through Friday. ■

Chrysler wants 'Jeep' in Brazil

SAO PAULO, Brazil — Before Chrysler Corp. can sell Jeeps as Jeeps in Brazil, it has to get the name back.

Chrysler has gone to court for rights to use the Jeep trademark. On the other side is Autolatina, the holding company for Ford Motor Co. and Volkswagen AG operations in Brazil. Ford Brasil S.A. acquired the trademark in Brazil in 1967 when it took over Willys Overland de Brasil. Ford continued to manufacture the Willys Jeep until 1983.

Autolatina considers itself heir to the Jeep name in Brazil

GM sees 1,500 fewer points

Plan calls for duals, a shift to suburbs

PHIL FRAME
Staff Reporter

Faced with a projected loss of 1,500 dealerships by the year 2000, General Motors has developed a plan to encourage GM dualing and to move many dealerships out of stagnating central cities into growing suburbs.

A secret plan called Project 2000 calls for dealership mergers, more dualing in cities and rural areas, and relocation from withering markets to growth areas.

Project 2000 is a detailed marketing and market planning strategy that outlines the most desirable size, makeup and location of the company's dealer body going into the next century.

The central idea: Get GM dealerships into the best locations with the best combinations of franchises to reap the greatest possible GM market share.

The study found that only about 7,200 GM points are likely to survive until the year 2000 because of competitive pressures and demographic changes, said a GM source.

The *Automotive News* dealer census, based on figures from the company, counted 8,732 GM dealerships as of July 1, down 191 from a year earlier.

Current and former GM employees and GM dealers who have met with the company's dealer network planning officials say dealer survival strategies include:

- More metropolitan area duals.
- Emphasis on multi-franchise GM points in less populous areas.
- Relocation of dealerships, mostly from cities to suburbs, to follow the population.
- Dealership mergers.

The head of Project 2000 is Edward Roggenkamp III, 48, executive director in charge of dealer network development for GM's North American Operations. Roggenkamp, through a GM spokesman, declined several requests to be interviewed.

Roggenkamp: heads project

Project 2000 determined that the ideal dual of GM makes was Pontiac-Buick. Other allowable duals are Oldsmobile-Cadillac, Oldsmobile-Chevrolet and Pontiac-Oldsmobile. GMC Truck could be added to any but the Olds-Chevy combination.

Buick and Oldsmobile duals would be forbidden because their products and customer base are too similar. Only Oldsmobile could dual with Chevrolet.

At least for now, no fund is available to help threatened dealers move or expand to accommodate other points. But GM may relax lending rules so GM's Motors Holding Division and General Motors Acceptance Corp. can do more.

GM officials will encourage some single-point dealers to merge with other GM dealers.

Historically, GM branch offices have vehemently opposed mergers, but that policy has loosened in the past five years. In fact, the policy may turn to aggressively favoring mergers.

In small towns where only two GM points are justified, GM will suggest combining Pontiac-Buick-GMC Truck and Chevrolet-Oldsmobile-Cadillac.

In a three-dealer town, the combinations would be a Chevrolet

Trade pact sets off era of opportunity

MAX GATES
Staff Reporter

WASHINGTON — U.S. automakers applauded, Japanese automakers fretted, suppliers cheered and union leaders jeered after a historic handshake last Wednesday.

U.S., Canadian and Mexican negotiators agreed to create the largest trading bloc in the world: 360 million people making up a total market of $6 trillion in Canada, Mexico and the United States.

About 7,000 individual tariffs, duties and non-tariff barriers to trade will be eliminated over the next 10 to 15 years. Among them are Mexican barriers that have limited auto imports into a market that has seen four straight years of double-digit sales increases and is bound to produce a record 1 million units this year.

NORTH AMERICAN FREE TRADE AGREEMENT

But the future is more promising. Mexico has about 75 cars for every 1,000 people — far below the United States' 575. And with Mexico's economic house apparently in order, demand for cars can only grow with free trade.

FREE TRADE PACT FALLOUT

Carla Hills a tough negotiator ➤ 3
Japanese cry foul ➤ 34
UAW just says no to deal ➤ 35
Suppliers see opportunities ➤ 35

"After 20 years of stagnation, we are hungry," Volkswagen de Mexico President Martin Josephi said earlier this year.

Under the deal, rules that require Mexican cars to have 36 percent Mexican value-added content will ease to 29 percent over 10 years. Vehicles built in Mexico, Canada and the United States will have to have 62.5 percent of their parts come from any combination of the three to avoid duties.

The fine print still must be worked out. And legislatures in all three countries must approve the pact. But already the Big 3 are happy about sections that will make it difficult for newcomers — notably, the Japanese — to benefit from Mexico's opening markets, at least immediately. The Big 3, VW and Nissan are Mexico's only automakers.

To qualify for tariff-free shipment across the two borders eight years from now, autos will have to contain at least 62.5 percent North American parts. For the first four years, the domestic content requirement is 50 percent, the same

FORD'S BETTER IDEAS

Cruisin' in the '90s with 5-speed automatic, shared platforms

Second in a series.
KATHY JACKSON
Staff Reporter

Ford Motor Co. will spend about $30 billion over the next five years to improve its product lineup, with a significant portion of that money going into powertrains.

The spending could yield a five-speed automatic transmission that likely will go into a redesigned Taurus and Sable, set to debut in the 1995 or 1996 model year.

Ford could be the first automaker to introduce the five-speed automatic in the United States.

"We've experimented with the three and four-speed (automatic)," said a Ford official. "We think it's now time to go to the five."

The Ford executive also said that electric vehicle production will play a large role in Ford's plans this decade.

FUTURE PRODUCTS

An array of new and improved products will hit Ford and Lincoln-Mercury dealer showrooms between 1993 and 1997.

Some plans are firm; others are still in the dream stage but have a good chance of surviving.

A source familiar with Ford's product plans says: "Like Toyota, Ford has decided to use powertrains to differentiate itself. I think they're right."

The most long-awaited and costly program is Ford's world car project — the 1993 calendar year

GM's '93 price strategy: some up, some unchanged, some cut

ARLENA SAWYERS
Staff Reporter

In an effort to remain a viable contender with carryover product in a hotly contested mid-sized market, General Motors is holding prices on some 1993 mid-sized cars.

GM also said it is reducing prices on some slower-selling cars and hiked prices on its most popular models. It is unknown if equipment levels are changed from the 1992 model year. Freight and destination charges are unchanged.

The result is a net increase of 1.6 percent on the 1993 cars priced last week, GM said. Geo cars and some GM truck models have not been priced yet.

Susan Jacobs, president of Jacobs Automotive Inc., a forecasting and consulting firm in Little Falls, N.J., applauded GM. Jacobs said because the economy will continue to be relatively soft into the fourth quarter and GM's mid-sized products are dated compared with their competition, the company i wise to compete on price.

"GM's prices are the best of th Big 3 so far," said Jacobs. "Th actual increases are in the 2 to percent range rather than the 4 to

Ford checks 2-stroke result

TECUMSEH, Mich — Ford Motor Co. is testing two-stroke Orbital engines to confirm EPA test results that indicate the engines initially meet California's Ultra Low Emissions Vehicle standards that take effect in 1998.

Peter Simons, president of Orbital Engine Co. USA Inc., said the EPA already has passed an Orbital engine with 4,000 miles under the ULEV standards, but the standards call for engines to last 100,000 miles.

Simons told media his company's engine plant in Tecumseh, Mich., will build approximately 20,000 engines in 1995, but he did not name his customers.

— Jack Keebler

Local approves GM strike

LANSING, Mich. — Members of UAW Local 602 at the General Motors body plant here last week approved a local strike over health, safety, work standards and subcontracting.

According to UAW spokesman Karl Mantyla, regional and international UAW representatives have joined the local's negotiation team. Mantyla said that if the issues are not resolved, the UAW could walk out five days after notifying GM.

The plant supplies the nearby assembly plant which produces the Pontiac Grand Am, Oldsmobile Achieva and Buick Skylark.

— Liz Pinto

Hertz to cut car purchases

PARK RIDGE, N.J. — The Hertz Corp. will cut its new car purchases by one-third in the 1993 model year, company officials said last week.

"This is in line with what Detroit has been doing, which is reducing capacity," said Joe Russo, vice president for government and public affairs.

Ford Motor Co., which owns 49 percent of the largest U.S. rental car company, announced a year ago it would begin cutting sales to fleets, and other makers followed suit.

Russo said Hertz will hold onto its cars for nine months instead of six.

— The Associated Press

Dealer settles Viper lawsuit

PONTIAC, Mich. — A lawsuit over who gets the first 1992 Dodge Viper sports car from Oakland Dodge in Madison Heights, Mich., has been settled out of court.

A prosecuting attorney, Mike Gruskin, will get the Viper for list price, but he will leave it on display at the dealership for six weeks after its arrival. Dealer Hoot McInerney doesn't know when it will arrive.

Gruskin wants to try to resell the car for a profit. He said he had a deal to buy the first car, and McInerney said he didn't.

— The Associated Press

GMAC buys British insurer

DETROIT — Motors Insurance Corp., a unit of GMAC Financial Services, has acquired Car Care Plan Ltd., a British provider of automotive breakdown insurance, for $10 million.

Car Care Plan, based in Leeds, England, has annual revenues of $73.5 million and will provide GMAC with entry into the European market.

"Car Care Plan will provide Motors Insurance Corp. with the foundation to establish a pan-European operation for mechanical breakdown insurance for new and used cars," said Joseph Pero, Motors Insurance president.

— Charles M. Thomas

Labor blamed in Maserati loss

RED BANK, N.J. — De Tomaso Industries Inc. blamed labor problems at its Maserati subsidiary for second-quarter net losses of $19.1 million on sales of $37.2 million, compared with a net loss of $1.9 million on sales of $74.8 million in the second quarter of 1991.

"The labor problems being experienced by our Maserati subsidiary which resulted in curtailed production and lost sales opportunities during the first half of the year, coupled with depressed sales of luxury cars worldwide, produced significant losses from operations," said company president Alejandro De Tomaso.

16 Hummer dealers named

SOUTH BEND, Ind. — AM General Corp. has named the first 16 dealers to sell the Hummer off-road vehicle.

The Hummer is scheduled to go on sale this fall. The company said there will be four body styles: a four-passenger hardtop, four-passenger convertible, four-passenger utility wagon and a two-passenger pickup.

AM General President James Armour said he expects to have 50 dealers nationwide by the end of the year. The first 16 dealers named last week were:

- Farrish Olds-Jeep-Eagle in Fairfax, Va.
- Smyly Autos Inc. in Malden, Mass.
- NuCar Chevrolet-Geo in New Castle, Del.
- Ed Schmidt White-GMC Truck in Perrysburg, Ohio
- Naperville Jeep-Eagle in Lisle, Ill.
- C&O Motors Inc. in St Albans, W.Va.
- Boomershine Hummer in Smyrna, Ga.
- William Lehman Isuzu in Miami
- Reeves Imports Motorcars Inc. in Tampa, Fla.
- Hummer of South Texas in San Antonio
- Bell Hummer in Phoenix
- Bob Moore Cadillac in Oklahoma City
- Medved Hummer in Wheat Ridge, Colo.
- Lee Galles Oldsmobile-Hummer in Albuquerque, N.M.
- Central Rockie Hummer in Salt Lake City
- Houston Hummer Inc. in Houston ■

briefly

No dice for Stempel guess

General Motors Chairman Robert Stempel says operations in North America have improved $1.2 billion from a year ago, "all due to manufacturing efficiency, cost reduction and the true performance of the team. I see no reason why that wouldn't continue." But he won't make any predictions about GM profitability in the second half because the future is unpredictable. In his words: "It's just like the Monopoly game when you land on the block that says 'Go to Jail.' "

THAT AWFUL WORD — Japanese competition is tough, but if you've spent a lifetime at **General Motors,** another automaker might be at the top of your splutter list. GM Chairman Stempel told a news conference that GM had no deal with **Toyota** to supply a V-8 engine for Toyota's new large T100 pickup truck. Then he noted, "We think we have a decidedly superior product, and we call that our full-sized pickup truck. Our friends across town in Dearborn" (oblique reference) "would tell you they have a decidedly superior product, called an F-" (pause) "**Ford**-something truck," (at last it's out) "and we go head to head on that."

ON THE GRAPEVINE — Parent company **Fuji Heavy Industries Ltd.** has been pruning **Subaru of America Inc.** since buying it out two years ago. "We Southerners have an expression," said Charles F. "Chuck" Worrell, a North Carolina native who became executive vice president in the latest shake-up. "If you're green, you're growing. And if you're ripe, you're rotten."

FAMILY TIES — Why didn't **General Motors'** much talked-about purchasing czar, J. Ignacio Lopez, attend this month's University of Michigan Automotive Management Briefing in Traverse City, Mich., one of the auto supply industry's premier events? Alan Perriton, GM executive director of purchasing, explained: "He is packing his home up with his wife and children to move them from Spain. He believes in the theory that says, 'No success can compensate for failure in the home.' "

BELIEVE IT — Lynn Hickey **Dodge** in Oklahoma City wants the Guinness world record people to add a category for this stunt: Dangling a van with dad inside until son had sold 2,000 vehicles during July. General Manager Wade Hickey said the store planned the event for a year and added 284 staffers to meet customer demand. "My showroom was busy from 7 a.m. to 3 a.m.," he said. Lynn Hickey was suspended 200 feet in the air. Dad dropped a tad with each sale. "Dad was in the air all day long" from July 15-25, Wade Hickey said. "He only got out late at night when all the customers were gone." The final tally: 587 new and 1,421 used vehicles sold.

Mitsubishi talks Dakota

MARY CONNELLY
and KRISTINE STIVEN BREESE
Staff Reporters

Chrysler Corp. and Mitsubishi Motors Corp. are discussing the potential sale of a Mitsubishi-badged Dodge Dakota in the United States in the 1994 model year.

Talks are very preliminary. The two companies confirm only that they are considering many possibilities for product sharing.

Mitsubishi Motor Sales of America already has one pickup, the compact Mighty Max. Sales in 1991, hampered by a 25 percent tariff, were only 18,247 units. A larger truck, built in North America, should give the company more volume.

If the deal comes to fruition, it would mark the first time that Mitsubishi has sold a Chrysler-built vehicle. On the other side, Chrysler last year sold 69,118 vehicles built by Mitsubishi; that amounts to 4.6 percent of Chrysler's 1991 sales.

Ford Motor Co. builds the Navajo sport-utility for Mazda Motor of America Inc. In the 1994 model year, Mazda's U.S. dealers will retail a version of the Ford Ranger compact pickup.

Asked about the possibility of selling a version of the Dakota, a Mitsubishi Motor Sales spokesman said, "There is no such plan at this time, but considering the 25 percent duty on pickup trucks, it would be smart to keep our options open."

The mid-sized Dodge Dakota could get a Japanese badge.

Chrysler introduced the mid-sized Dakota in the 1987 model year, to fit between its Dodge Ram 50 compact and Dodge Ram full-sized trucks.

Toyota Motor Sales U.S.A. Inc. will be the first Japanese company to sell a truck larger than a compact when it begins selling its T100 pickup in November. The truck is closer to full-sized than mid-sized.

In 1991, Chrysler sold 82,336 Dakotas. The mid-sized truck, now produced only in Warren Mich., will also be produced in Toledo, Ohio, starting next summer. Depending on product mixes at the two plants, that could increase production capacity.

In July, Mitsubishi and Chrysler executives met in Tokyo to discuss future product strategy. Chrysler chairman-designate Robert Eaton and President Robert Lutz attended the sessions.

A Chrysler spokesman said the two partners have discussed "a variety of plans and future alternatives" and that such talks will continue.

Saab forms Japan unit

TOKYO — Saab Automobile AB will establish a subsidiary in Japan before the end of the year, trying to improve its standing in the Japanese market.

Last year, Saab's independent importer, Seibu Motor Sales Co., sold 2,236 units in Japan, a decline of 19.8 percent from 1990. The new company, Saab Japan, will supplement Seibu.

Saab's fellow General Motors Corp. affiliate, Opel, sold just 2,725 units in 1991, and decided to use Yanase & Co., Japan's largest importer, starting in January. Yanase also handles GM models from North America.

– Saab Japan is so far independent from GM Japan.

Truck sales flatten cars in early Aug.

JIM HENRY
Staff Reporter

NEW YORK — Trucks roared through another 10-day period as light-truck sales climbed 25.5 percent. Car sales remained flat.

"Sport-utility sales are through the ceiling. In 22 years, I have absolutely never seen anything like this," said Gary Grim, the owner of Roswell (Ga.) Jeep-Eagle Inc. outside Atlanta.

Grim said 12 Grand Cherokees had just arrived last Friday. "I've got people outside now, bidding against each other," he said, and he has deposits for 85 more.

Industry sales of 267,149 cars and light trucks were 9.0 percent above a disappointing year-ago period. Car sales totaled 158,534, at a daily rate almost exactly equal to last year. Comparisons in this story are based on the daily selling rate, since there were eight selling days Aug. 1-10 this year, and nine days last year.

This year, Big 3 truck sales continue to lead the way. Light trucks accounted for 40.7 percent of early-August unit sales.

"If it weren't for trucks and vans, dealers would really be hurting," said Tom Webb, chief economist for the National Automobile Dealers Association.

Many dealers hurt anyway.

"My business has always been about 50 percent cars and trucks, and it continues to be. Trouble is, I'm not selling enough of either one," said Robert Maguire, president of Bob Maguire Chevrolet, and Saturn of Bordentown (N.J.) He said his Chevrolet sales this year will be below 600 new units, off about 50 percent from 1987.

He said Saturn is doing better by comparison, and he expects to open a second Saturn showroom next March.

GM sales rose 5.3 percent, Ford was up 18.0 percent, and Chrysler Corp. was up an estimated 28.9 percent. *Automotive News* estimates 10-day sales for Chrysler and most imports.

American Honda Motor Co. Inc. was down 6.5 percent, Nissan Motor Corp. in U.S.A. was about even, and Toyota Motor Sales U.S.A. Inc. slid 13.0 percent below a slow year-ago period, even though Lexus sales were up 14.0 percent.

Saturn's cupboard is stripped bare

JIM HENRY
Staff Reporter

INVENTORY TABLE > 37

Saturn Corp.'s cupboard is bare, cleaned out by growing sales, a two-week shutdown in July and the changeover to the 1993 model year.

The General Motors subsidiary reported a 13-day supply of cars as of Aug. 1, the lowest reported supply in the industry. Some dealers had no cars at all. A month earlier, the supply was 23 days.

"In my 40 years in the car business, I can't remember ever going into a new model year so clean," said Eli Bloom, chairman of Saturn of Long Island City (N.Y.). Bloom is also president of Bloom Pontiac, Long Island City.

"We are down to four or five '92s, including demos, so we are practically out of cars. We've got salesmen driving used cars," Bloom said last week.

He said he's probably lost some sales because of the shortage, but he expected the 1993s within a few days, and most customers seem willing to wait. He said he has orders for "many more than dozens" of 1993 models.

"The dealers are not getting up in arms about this, telling Saturn to ship 'em and worry about 'em later. There are too many car companies that made a living doing that, and they always regret it later," Bloom said.

Michael Lazarus, co-owner of Saturn of Massapequa (N.Y.) and a satellite dealership, said he ran out of Saturn coupes two months ago. He said the last truckload of 1992 models arrived last Wednesday morning, and the first 1993s arrived that afternoon.

He said his two Saturn showrooms sold almost 400 cars in July, but some sales were lost because of the shortage. "I'm pretty pleased. We knew there would be a dry spell in August. Saturn has done what they promised they would do."

In general, automakers seemed to have inventories in hand.

The total industry posted a 62-day supply, exactly even with the previous month. Car stocks were at 58 days, which was the same as July 1, and a little thinner than trucks.

There was a 68-day supply of light trucks, about even with a 69-day supply a month earlier.

Saturn expected many dealers to be receiving their first 1993 models this week, said spokeswoman Necole Merritt. She said Saturn would not rush the model-year changeover, even though dealers are short of cars. "Our focus is on quality, not necessarily numbers," she said.

With a 61-day supply overall, parent company GM was just below the industry average.

GM Chairman Robert Stempel said at a news conference that he was pleased with GM's inventory performance.

"We are keeping our inventories in line. Our production is very balanced, we don't have any overhang, we have a few shortages of a few models, but we think we're appropriate for this marketplace."

He projected 1992 car and light truck sales for the United States "to be around the 13.1 million level."

"None of us sees this market coming back rapidly," said Stempel. "Obviously, this strategy would be at risk if all of a sudden the consumer turned on. But we don't see much opportunity for consumers to change their minds quickly. As you know, it's flat. Consumer sentiment dropped in July, and I think we're appropriate with our inventory."

Cadillac had the fattest inventory of the GM divisions, at 97 days, after its sales fell 23.3 percent in July. Buick pared its stocks to 48 days from 64, with supplies of Regal and LeSabre models cut nearly in half. LeSabre sales jumped 83.1 percent in July.

Sales of the LeSabre, which was redesigned for 1992, are up 44.1 percent for the year to date. Buick spokesman Larry Gustin said the 1992 model year has been the best for LeSabre in eight years. He said LeSabre is the No. 1-selling full-sized car for the model year to date. "And that's retail," he said, "not fleet."

Internal power struggle splits VW union in Mexico

JOHN WATLING and TALLI NAUMAN
Special Correspondents

MEXICO CITY — The auto workers union locked out of Volkswagen de Mexico's Puebla plant since late July has been one of the nation's strongest and most combative labor organizations.

Volkswagen de Mexico shut the doors on workers in late July after intra-union squabbles forced the plant to close for several days.

Most immediately, the shutdown creates a shortage of Beetles — Mexico's best-selling car — and the new Golfs and Jettas now on sale in Mexico. For VW's U.S. subsidiary, it threatens the launch of the third-generation Golf and Jetta this fall.

But disputes are not new at the Independent Autoworkers Union.

VW Mexico employees founded the union in 1972, after splitting from the Mexican Workers Confederation. Under the 52-year reign of confederation leader Fidel Velazquez, the confederation has been tightly knit with employers and a pillar of the ruling Institutional Revolutionary Party.

The first head of the VW union, Juan Ortega Arenas, was expelled after a bitter factional fight in 1982. But his legacy plagued the union afterwards. Statutes and practices he developed left the organization with an executive committee hierarchy where officials receive lucrative expense accounts, company cars and other perks. Seventeen contenders sought the secretary general position in union elections late last year.

In a runoff vote, Gaspar Bueno finally defeated Jesus Valencia by 80 votes. But the seed had been planted for another battle during this year's collective bargaining.

The 15,000-member Independent Autoworkers Union called off a 35-hour strike on July 2, when labor leaders announced they had negotiated the conditions they had demanded of Volkswagen. Union officials said the contract called for a 20-percent wage hike, 4 percent benefit increase and concessions from company demands that had spurred the strike in the first place.

The company had wanted more freedom to move workers around between tasks and shifts; more power to hire non-union subcontracting personnel; less union interference in decisions on quality and efficiency improvements; open shop at 40 German supply companies Volkswagen plans to attract to Puebla; and a merit-based pay scale to replace the existing seniority system.

But four days later, the union's executive committee told members it had also signed a separate covenant with Volkswagen to achieve higher productivity through instituting Japanese-style work groups.

On July 20, union members voted to oust Bueno, citing disillusionment with leaders for not informing them about the covenant. Led by Bueno's political rival, Jesus Valencia, they collected 9,000 signatures calling for a change in union leadership. When Bueno refused to step down, employees staged a work stoppage and held a sit-in at the plant gates.

After six days of lost production, Volkswagen locked out workers and called in police. On July 26, the company petitioned the federal labor board to rescind the union contract.

If the company wins, it could sever relations with the union by firing all union workers and rehiring them on company terms. In an effort to end the conflict, Mexican Labor Secretary Arsenio Farell negotiated an accord between Bueno and Valencia to hold a new election for secretary general. But Martin Josephi, president of Volkswagen de Mexico, said the offer would not assure stable labor relations and the company would insist on cancelling the contract.

Valencia's campaign promise to restructure union statutes remained unfulfilled when Valencia rallied supporters against Bueno after the clandestine signing of the work-group covenant.

Gonzalo Texis, president of the union negotiating commission, acknowledged that those who signed the contract and covenant had no formal mandate to do so and that no vote was held to call off the strike.

Texis said commission members simply announced their progress on the contract to strikers at the Volkswagen parking lot on July 2, and after receiving applause, returned to the bargaining table to sign both the contract and the work-group covenant that sparked controversy when it was announced later. ■

GM Brazil says new Omega is world-class competitor

RIK TURNER
Staff Correspondent

ORLANDO, Fla. — GM do Brasil's upcoming launch of the new Omega marks a sea change for the company.

The car has been been designed and built with modern manufacturing concepts, such as just-in-time delivery. But the project also took into account Brazil's integration into the world economy through the opening of its borders to imports.

The company unveiled the car to the press in Orlando this month, the first time in its 67-year history it has held such an event outside Brazil. GM said it made the move to demonstrate its belief the Brazilian-built Omega can compete with world-class cars.

Vice President Andre Beer said that initially some 25 percent of the value of each vehicle will be imported from Adam Opel AG in Germany, home of the Omega, or from GM in France, which supplies automatic gearboxes.

The company says it wants to produce as much of the car as possible in Brazil. But the main concern now is to have "reliable suppliers, wherever they are," says Jose Eugenio Pinheiro, manager of the Sao Caetano do Sul factory that produces the Omega.

With Brazilian President Fernando Collor progressively opening the country to imports, GM can now pursue a manufacturing strategy that banks on imported parts. That also increases GM's muscle when it negotiates prices with Brazilian suppliers.

Of the $380 million invested over the last 25 months, $250 million went to tooling.

The outlay is part of $1 billion the company plans to invest by 1995 to create what Beer calls "a new cycle of Chevrolet products" in Brazil.

The Omega will be launched Aug. 28th. The company will have 2,000 vehicles distributed around its 420-member dealer network.

The GLS will be fitted with the Brazilian-made, four-cylinder, 2.0-liter engine that powers the Monza sedan. The GLS will sell for under $30,000, Beer said, and compete against other Brazilian-made family sedans such as the Volkswagen Santana, Ford Versailles and Fiat Tempra.

The CD has a six-cylinder, 3.0-liter engine imported from Germany. It will sell for about $45,000 and face off against Japanese luxury imports and smaller BMW and Mercedes models.

"If we imported these two cars, they would retail for around $50,000 and $73,000, respectively," said Beer. Both models will be available initially only in gasoline-powered versions. Alcohol-driven alternatives will arrive a few months later.

Export possibilities include the Southern Cone Common Market (Brazil, Argentina, Uruguay and Paraguay), which comes into existence at the end of 1994. Another strong candidate is Chile, a highly competitive market that's now booming. ■

Saturn dealers' sales average still leads pack

KAREN DETKOWSKI
Staff Statistician

Saturn dealerships continue to leave the competition in their wake — but Toyota, the No. 2 ranked automaker in sales per dealer, keeps on showing increases.

The General Motors subsidiary topped the sales-per-dealer calculation for July with an average 123 unit sales at each outlet, down from 137 in June.

July U.S. vehicle sales dropped 11.1 percent from a month earlier, and the decline is reflected in the July sales-per-dealer calculation.

Automotive News sales-per-dealer calculations for July are based on an actual dealer census taken on July 1.

Only five makes showed increases as sales in July fell. Also, of 38 makes, 27 of them lost franchises in the first half of the year.

Toyota's dealer sales increased 11 units in July for each of its 1,190 franchises. The company's sales were up over June by 15.0 percent.

Mazda truck franchises reflected a four-unit increase per dealer in July.

There were 26 selling days in July and June.

The *Automotive News* dealer census reported Aug. 10 that Saturn's dealer network has increased by 48 dealers since Jan. 1.

In addition to Saturn, only nine other franchises increased dealers since the beginning of the year: Eagle, Lexus, Infiniti, Subaru, Mitsubishi, Lincoln, Honda, Hyundai, and Isuzu.

The remaining 27 automakers and importers in the United States lost dealers in the first half. ■

Geo line moves away from imports, fleet sales

LINDSAY CHAPPELL
Staff Reporter

Chevrolet's Geo line continues replacing import sales with North American factory output.

Import sales for the General Motors line were down more than 18.2 percent through the end of July, or about 9,300 cars.

At the same time, sales of Canadian-made Geo Trackers and Metros increased by about 18,500. Both were formerly built in Japan, and some Metros still are.

Sales of the Geo Prizm sedan, which also is built in North America, slipped by more than 10,000 units so far this year. Chevrolet is blaming that decline on cutbacks in fleet allocations this year.

Chevrolet channeled many of its nearly 100,000 Prizms last year into daily-rental fleets. An industrywide move away from such sales could cut that number by about a third this year, said a spokesman.

In the 1993 model year, which will see an all-new Prizm, Chevrolet intends to focus more on retail sales and to cut fleet activity as much as possible, a Chevrolet spokesman said. The Prizm is built by GM's 50-50 venture with Toyota Motor Corp. in Fremont, Calif.

Overall, Geo sales were off sharply in July, but only slightly for the year to date. Combined sales of cars and trucks, imported and domestic, totaled 173,975 for the period, a 1.5 percent decline from 176,671 in the first seven months of 1991.

Chevrolet Division was down 4.7 percent for the seven months. The sport-utilities saw a 1,231-unit growth in sales, to 21,020.

Sales of domestically built Metros shot up 44 percent to 56,581 units in the period. Imported Metros, primarily convertibles, increased nearly 27 percent to 9,831 units. AN

India maker expands horizons in Bangladesh

SADANANDA MUKHERJEE
Special Correspondent

NEW DELHI — Tate Engineering and Locomotive Company Ltd., India's largest manufacturer of commercial vehicles, is now setting up a joint venture in Bangladesh to assemble its trucks.

Telco's collaborator from Bangladesh is Nita Company Private Ltd., which will have a stake of 60 percent equity in the joint venture, valued at 27 million ruppees, or about $900,000.

to set up a base there. Under the new rules, completely built-up vehicles pay a 95 percent duty, while complete knock-down kits pay 28 percent.

The company's exports have been rising. In the most recent 12-month report, Telco exported 5,983 vehicles, up 89 percent over the previous year. Telco increased exports to Bangladesh, Malaysia and Sri Lanka and established new markets in Bolivia, Kenya, Malta, Morocco and Mozambique.

The company is exploring markets of some Euro-

TRADE

Auto accord key to North America pact

continued from PAGE 1

as under the current U.S.-Canada Free Trade Agreement. It rises to 56 percent after four years.

The deal also spells out a new method for calculating "domestic" content. Individual parts will be traced back to their source to establish their "true" North American content. That should get rid of some of the mystery behind the count and avoid disputes that have scarred the existing U.S.-Canada Free Trade Agreement.

In addition, the auto portion does away with the "roll-up" and "roll-down" system for counting key components. That has skewed the numbers — and created conflict — by allowing companies to count a part as 100 percent domestic even if it contained 49 percent offshore components, and calling a part 100 percent imported even if it had 49 percent local content.

Mexico expects difficult times during the early years of free trade. Its long-protected parts industry could be especially hard hit. But the hope is that foreign investment and increased markets for Mexican products will bring unprecedented prosperity to a nation eager to move from a state-controlled economy to a free market.

For Canadians, the deal means confronting once again a decision between protectionism and international trade.

The 4-year-old U.S.-Canada Free Trade Agreement has been blamed for the country's current recession and high unemployment. Critics say a three-nation treaty will just make things worse.

NORTH AMERICAN FREE TRADE AGREEMENT

But Canadian leaders defended the pact, saying it will bring new markets and long-term economic benefits.

THE AUTO DEBATE

The automotive sector was one of the last major pieces of the agreement to be put into place after 14 months of talks. The deal was struck after 14 intense days of top-level negotiations at the Watergate complex in Washington.

As the talks dragged on, U.S. interests worried that U.S. Trade Representative Carla Hills and her team would give away too much.

But there were no signs of a last-minute giveaway.

General Motors Chairman Robert Stempel was happy with the North American content rule.

"In the eleventh hour, I think our negotiators did a spectacular job. They brought Mexico along, moved Canada and the number came out 62.5 (percent)."

But Ford Motor Co. and Chrysler Corp. officials were less enthusiastic. They wanted North American content set at 65 percent, the figure endorsed by the Big 3.

Ford Chairman Harold Poling said 65 percent was necessary "to assure that tariffs are eliminated only for those companies that have made or are willing to make substantial economic commitments in North America."

Chrysler also was disappointed in the percentage, but said the agreement on balance was favorable to the company.

In Japan, the Ministry of International Trade and Industry will ask for a thorough review of the agreement by the secretariat of the General Agreement on Tariffs and Trade. MITI argues the change in local content regulations might violate international tariff rules.

The agreement may also open the door to U.S.-based auto dealers to set up shop or do joint deals with Mexican retailers. Progressive Mexican dealers have been studying the likes of Lexus and Saturn counterparts in hopes of becoming world class once trade doors open.

U.S. parts makers also will gain by enjoying greatly expanded access to Mexican markets. They also stand to pick up more business from Japanese transplants trying to meet the higher North American content requirements.

JOB LOSS FEARS

The three nations have issued a 44-page summary of the agreement, but many details are still to be written before the text is formally submitted to Congress, probably in early September.

Predictions of job losses came from all three countries.

"This deal in its present form will vaporize thousands and thousands more good-paying U.S. jobs," said UAW President Owen Bieber.

Canadian Auto Workers President Basil "Buzz" Hargrove said the three-nation pact will increase his country's job losses in recent years, which he blamed on the U.S.-Canada Free Trade Agreement. "With hundreds of thousands of job losses and the erosion of social programs, the expansion of FTA into the NAFTA will be of no benefit to Canadians."

Pablo Cuellar, an economist with the Monterrey, Mexico, Chamber of Commerce, predicted job losses in his country, at least in the early years of the deal.

"Many Mexican businesses will simply disappear" because they are small and unable to compete, Cuellar told the Associated Press.

U.S. and Canadian labor leaders fear automakers will transfer jobs to Mexico to take advantage of cheaper labor and relatively relaxed environmental protection costs.

But Mexican economist Roberto Salinas-Leon, a free-market advocate currently working at the conservative Heritage Foundation in Washington, argues that Mexican labor isn't all that cheap.

First, wages are bound to rise as Mexicans increasingly share in the profits of an open economy, Salinas-Leon said last week.

But even now, Mexican labor isn't cheap because low productivity more than offsets low wage rates, he said. "So Mexican labor is actually more expensive."

Meanwhile, the first shots have already been fired by Congressional critics of the deal.

They are particularly concerned about environmental protection along the U.S.-Mexican border and funding for worker compensation and retraining for those who lose their jobs under NAFTA.

House Ways and Means Committee Chairman Dan Rostenkowski, D-Ill., has scheduled hearings in early September. EPA Administrator William Reilly and Trade Representative Hills will be key witnesses.

Automotive News staffers Phil Frame in Detroit, Mary Ann Maskery in Tokyo, Jeremy Sinek in Toronto and Lindsay Chappell in Nashville, Tenn., contributed to this report.

Deal is far from done

WASHINGTON — Canada, Mexico and the United States spent 14 months negotiating the North American Free Trade Agreement. Here's what the United States needs to do before the deal can take effect:

■ Trade negotiators from the three countries must complete the fine print on a formal legal text. President Bush is expected to submit it to Congress after Labor Day. Hearings have already been scheduled for September.

■ Congress has 90 days to vote — but it will be out of session and on the campaign trail most of that time. If a simple majority says yes, Bush could sign the pact as soon as December. Under "fast-track" authority granted by Congress, the deal can't be amended.

■ If it is signed, another fight could come early next year. That's when Congress will be required to pass laws to implement the deal. More hearings could be held.

■ If Bush is re-elected, Democrats will likely want to spend more than Bush wants to protect Mexico's environment and to compensate and retrain U.S. workers who lose their jobs because of free-trade.

If Bill Clinton wins, his administration would likely commit more funds to those causes. That should make passing the implementing laws easier — if Democrats remain in power in Congress.

■ Legislatures in Canada and Mexico also must approve the deal.

— Max Gates

Pact changes CAFE content game

LINDSAY CHAPPELL
Staff Reporter

The new free-trade accord will permit automakers to count Mexican-made parts as "domestic content" and gives new flexibility for meeting U.S. corporate average fuel economy standards.

EPA rules require producers to classify cars as either domestic or import depending on whether they have 7[illegible] percent or more U.S. and Canadian content. Both fleets must average at least 27.5 mpg.

The EPA's definition of "content" is more liberal than the one used to determine duty-free trade. But in EPA's eyes, Ford Motor Co.'s Mexican-built Tracers have enough U.S. and Canadian content to qualify as "domestic."

Conversely, Ford uses enough "non-domestic" content in its Crown Victoria for it to qualify as an import. That big Canadian-built cars is averaged among Ford's high-mpg imports.

The new option, which takes effect three years after the pact's enactment, will allow carmakers to count Mexican parts in either camp. Counting Mexican parts, the Crown Victoria currently has more than 75 percent U.S., Canadian and Mexican content. But Ford won't have to count the Mexican parts as domestic, so it can still classify the cars as imports.

Japanese transplants decry increase in content levels

'Costly changes in tooling' needed

LINDSAY CHAPPELL
Staff Reporter

Japanese transplant carmakers in Canada and the United States see trouble in the North American Free Trade Agreement.

The Japan Automobile Manufacturers Association in Washington immediately called it "a giant step in the wrong direction."

The Japanese wanted a 50 percent North American (United States, Canada, Mexico) content level for duty-free trade. The agreement starts at that point, but raises it to 62.5 percent over eight years.

"As a result, there will be costly changes in the tooling and production plans of Japanese automotive plants operating in the U.S. and Canada," said a statement from the trade association.

The Japanese firms will be at a disadvantage because the Big 3 will be able to count their Mexican content as domestic. The Big 3 all build engines and other components in Mexico. Nissan Motor Co. Ltd. is the only Japanese company building cars in Mexico. It also builds engines and parts and will soon open a second assembly plant.

A spokesman for Toyota's Canadian plant in Cambridge, Ontario, noted that this will be the second time the government has changed content rules since Toyota began operations there in 1988. In 1989, the U.S.-Canada Free Trade Agreement changed the process for counting content.

"The tougher NAFTA rules won't affect the traditional American manufacturers," said Toyota spokesman Adrean Korstanje. "They make it more difficult for new entrants into the industry, while giving a privileged status to the traditional companies."

But Neil DeKoker, president of the Automotive Parts Manufacturers' Association of Canada, said the deal will not put free trade out of reach of the Canadian transplants.

He said that the eight-year phase-in should give the transplants time to source whatever additional content they require.

"Most of the transplants are already in good shape for meeting the new rules," DeKoker said. "They have announced major global sourcing plans that should increase what they're already sourcing here. Surely within eight years they will be where they need to be."

In addition, changes in the way that content origin will be traced could add 3 to 4 percent to existing levels, he said.

Under present rules, components with 50 percent or less U.S. or Canadian content are "rolled down" to count as zero. Components with at least 51 percent are "rolled up" to count as 100 percent local.

The rules resulted in an entire Ohio-made Honda engine, with an estimated value of $1,500, being rolled down to zero when U.S. Customs calculated the content of Honda's Ontario-made cars this year.

Under the proposed new trade rule, even if the Ohio engine contains only 49 percent "domestic" parts, at least that much of its value would be included in the completed car.

Toyota Motor Corp., Honda Motor Co. and Suzuki Motors Corp. have been struggling to convince U.S. trade officials that their Canadian-built cars meet the existing 50 percent North American-content requirement.

Toyota, and Suzuki's 50-50 joint venture with General Motors of Canada, are under audit by the U.S. Customs Service to prove their 50-percent claims.

"We have easily met the 50-percent requirement" under the U.S.-Canada Free Trade Agreement," said Gail Neuman, vice president of human relations at Nissan Motor Manufacturing Corp. U.S.A. in Smyrna, Tenn., which produces some vehicles for Canada. "I don't have any idea whether we would qualify under the new level."

Earlier this year, Customs informed Honda that its Ontario-built Civics contained only 46 percent local content. Honda had calculated the level at 69 percent.

"We still believe our cars meet the required content level," said a spokesman for Honda of America Manufacturing Inc. in Marysville, Ohio. "We really don't know what the new rules will mean for us, or how they will be implemented. It will take us some time to study it."

UAW just says 'no' to pact

Union sees exodus of jobs to Mexico

LIZ PINTO
Staff Reporter

NORTH AMERICAN FREE TRADE AGREEMENT

While economists, business leaders and the White House touted the joys of free trade with Mexico, the UAW shouted "no."

President Bush "has just driven another nail into the American auto worker's coffin," said Jim McNeil, president of UAW Local 600 at Ford Motor Co.'s assembly plant in Dearborn, Mich.

The sentiment was echoed by other UAW local officials across the country.

"You know if George Bush was involved in it, it wouldn't help the working class," said Jimmy Hyde, secretary/treasurer of UAW local 10 at General Motors' assembly plant in Doraville, Ga. "It will benefit business if Bush had anything to do with it."

The UAW contends that the North American Free Trade Agreement will drain the United States and Canada of automotive manufacturing jobs that have been the backbone of the economy. The union says free trade means high-paying manufacturing jobs will move south of the border, where auto workers earn about $100 a week.

U.S. businesses argue the agreement will increase American jobs by making businesses better able to compete against Pacific nations and a unified Europe.

Leo Troy, professor of economics at Rutgers University in New Jersey, said the only way to increase living standards in Mexico is to enrich the country through investment.

"You cannot get people out of poverty without economic growth within the country, and a free-trade agreement will accomplish this," Troy said.

But he also agreed with union members who say the United States will lose unskilled automotive manufacturing jobs to Mexico. This, he says, should be an incentive for auto workers to gain more skill and education because the highly skilled jobs will stay in the United States.

"Competition forces you to face facts," Troy said, "The U.S. auto industry has been somewhat sheltered from foreign competition in the past, but now that protection will be stripped away. But those people entering the work force will see that they need more skills and education to get good paying jobs, and those who don't retire from the industry will have time to get retrained and re-educated.

"The agreement is a positive thing and will benefit us by making the U.S. a country with a highly skilled work force which will enjoy a higher standard of living because products will be cheaper to buy."

Not so, says Billy Jackson, president of UAW Local 2164 at GM's plant in Bowling Green, Ky.

"Passing of the free-trade agreement will result in lower wages, fewer jobs and a reduced standard of living for the majority of U.S. workers," Jackson said.

Troy said the key reason U.S. workers have enjoyed a high standard of living is because they live in the world's largest free-trade area. The agreement builds on the that premise.

But with GM planning 21 plant closings and 80,000 layoffs in North America, auto workers find themselves behind the eight ball once again.

Bob Harlow, president of UAW Local 1776 at GM's assembly plant in Ypsilanti, Mich., lost a bid to keep his plant open earlier this year. He says GM's decision to keep a plant in Arlington, Texas, instead was tied to the free-trade plan. GM wanted a nearby source for cheaper-made parts, Harlow claims.

All the union local officials interviewed for this story said the free-trade deal has motivated members to back Bill Clinton for president.

Clinton has supported free trade with Mexico. But in a speech at the recent UAW convention in San Diego, Clinton said he would fight to force Mexico to raise its labor, wage, safety and environmental standards to keep investment flowing into the country.

UAW President Owen Bieber said in a prepared statement, "We'll be working to elect a president and congressional representatives who understand it's both possible and desirable to expand trade so that it benefits working people instead of economic elites."

Suppliers welcome more access

Trade group sees more export sales

LINDSAY CHAPPELL
Staff Reporter

New access to the Mexican market has U.S. and Canadian suppliers excited about the North American Free Trade Agreement.

Two large U.S. supplier trade groups and the major Canadian parts group expressed the same two sentiments over the proposal.

All three predicted that North American suppliers will find new export sales in Mexico once tariffs are eliminated and import restrictions curbed. They also said that easier foreign-investment rules in Mexico will give the industry new manufacturing flexibility.

The proposed rules would shave current Mexican requirements for 36 percent Mexican value-added content to 29 percent. The rules would eliminate Mexico's 15- to 20-percent tariff on most imported parts, and also the 2- to 6-percent U.S. tariffs on Mexican parts.

The pact would also allow North American firms to invest freely in new Mexican plants and to take over joint ventures. Foreign firms now are restricted to a 40-percent stake.

The plan also would require vehicles to contain at least 62.5 percent North American content in order to qualify for tariff-free movement among the three countries. That will press Japanese and German automakers on the continent to source more local components.

The 1,200-member Automotive Parts and Accessories Association in Bethesda, Md., said the agreement "opens the door to unprecedented North American and vehicle and parts-market growth."

Despite prospects that northern suppliers could take a new chunk of its traditional business, even the Mexican parts industry spoke optimistically about the accord last week.

"If the regulations remained as they are today, it would be better than under the negotiated rules," said Ernesto Garza, president of the Auto Parts Manufacturers Association of Mexico. "But we are aware that these changes are necessary in order to obtain free trade.

"There will be some Mexican companies who will not be able to compete. But in general, the parts industry will have the opportunity to grow and reach economies of scale that will make it competitive with parts makers in the United States and Canada."

Recent trade trends were already encouraging the industry. While Mexican parts sales to the United States have been booming in recent years, U.S. sales to Mexico have been booming louder.

As a result of liberalized trade, the United States recently erased its long-standing auto-parts trade deficit with Mexico. In the past three years, Mexican imports of U.S. auto parts have doubled to $5.4 billion a year.

That gave the United States its first parts-trade surplus with Mexico last year since the U.S. government began monitoring the trade in the 1970s. The 1991 surplus was $529 million, up from a $1 billion deficit two years before. In the first quarter of '92, the balance lapsed back to a $230-million deficit.

Rewards, costs of deal

Some potential winners and losers under the proposed North American Free Trade Agreement:

WINNERS

- **U.S. and Canada assembly plants:** Big 3 plants in the United States and Canada are expected to enjoy new demand from an opened Mexican market. Imports accounted for 1.5 percent of the Mexican Big Five's 614,823 sales last year. Most came from the United States. Once Mexico's restraints on imports are lifted, U.S. automakers could serve an expanding Mexico through underutilized U.S. plants.
- **Large U.S. retailers:** Mexico currently has 1,020 auto retailers. By U.S. standards, the Mexican retail network is antiquated. With relaxed rules on foreign investment, aggressive U.S. dealers could find opportunities for partnerships or direct investments in Mexico.
- **U.S. and Canadian suppliers:** They see the deal as a chance to boost sales to Mexican assembly plants, to Big 3 plants that would sell more to Mexico, and to Japanese transplants who now face higher North American content requirements.
- **Mexican labor-intensive suppliers:** Mexico's near-term advantage is in labor-intensive products, in part because worker compensation costs are low. Large numbers of "high touch" suppliers set up maquiladora plants in the 1980s.

James Womack, an industry consultant who advised the Mexican government on the trade pact, believes that demand for some low-priced Mexican commodity items, such as wire harnesses, batteries and seating material, will rise.

- **U.S. and Canadian high-tech suppliers:** As vehicle assembly increases in Mexico, the need for U.S. and Canadian technical services and products will grow, says James Mateyka, vice president of Booz-Allen & Hamilton Inc., a consulting firm. Likely beneficiaries: engineering services, castings firms, electronics and computer-system suppliers.

LOSERS

- **Mexican-built big cars:** With restraints on imports, Mexican plants often supply a wide variety of models. Booz-Allen's Mateyka believes an open door to the north will make such plants redundant and lead to greater rationalization with U.S. and Canadian plants.

Womack predicts the shift should create an opportunity for low-cost Big 3 vehicle production in Mexico. "Mexico gives Detroit the chance to reclaim the bottom section of the market that they handed over to East Asia. There's really no way Japan or Korea can compete with Mexico," he said.

- **Japanese transplants:** The 62.5 percent domestic content threshold stands as a hurdle for Japanese assemblers in North America who want tariff-free treatment. But the push to catch up could also backfire on U.S. suppliers if Japanese automakers turn to Japanese second-tier and third-tier transplant suppliers.

What the trade agreement means for the auto industry

Trade negotiators waded through some 20,000 government regulations and 9,000 separate tariffs in order to draft the North American Free Trade Agreement.

The exact agreement — which has not been fully released by the U.S, Canadian and Mexican governments — is long and complex, treating each tariff separately.

The following provisions affect the auto industry:

- Mexican rules that limit import sales will be reduced as the 1989 Mexican Auto Decree is phased out over 10 years.
- Mexican vehicle parts will be counted as "domestic" for EPA fuel-economy accounting after three years. Definitions of local content continue to be much stricter for determining duty-free trade status than for U.S. fuel-economy fleets.
- U.S. tariffs on car and engine imports from Mexico are eliminated immediately; trucks will take five years. Mexican tariffs on U.S. automotive products are cut in half immediately.
- Mexican duties of about 15 percent on most U.S. and Canadian parts are eliminated after five years.
- Mexican requirements for balanced trade are eased, which now force importers to re-export larger amounts.
- Mexican value-added content requirements are reduced from 36 to 29 percent over 10 years.
- Mexican import limits on medium- and heavy-duty trucks are eliminated after five years.
- The North American content requirement for tariff-free movement reaches 62.5 percent after eight years. The current U.S.-Canadian level is 50 percent.
- U.S. trade accounting principles for determining North American vehicle content are clarified and streamlined. "North American" or "domestic" content will now mean U.S., Canadian — and Mexican.
- Restrictions on greenfield investments are eliminated.
- Takeover of Mexican joint ventures by U.S. or Canadian partners will be allowed after five years, with Mexican government approval.
- Both commercial and consumer barriers to the Mexican auto-financing market are eliminated.

STRAUSS

NADA chief urges focus on quality

continued from PAGE 3

"Look at the growth of brokers — they prosper because customers are apprehensive. Well, who caused all this anxiety? No other business in the world has these kinds of middle men, so why should we have them in our business?"

Not that the manufacturers are infallible. Strauss scolds them for their addiction to using customer rebates. "Rebates create problems on the floor for managers and destroy the integrity of pricing," he said. "The customer doesn't know what's going on because the sticker means nothing.

"Price is the wall between the customer and the salesman," said Strauss. "We have to tear down that wall so price becomes less of a concern, so customers focus on the quality of the dealership and the products."

He is an advocate of price-point marketing — pricing a vehicle and letting customers decide whether price and value match.

Ford Motor Co. has tinkered with such pricing with mixed success. In 1990 the automaker switched from consumer to dealer incentive programs across nearly all of its car and truck lines, but when other automakers failed to follow its lead, Ford returned to consumer incentives.

More recently, Ford has experimented with value pricing on its Escort and other vehicles with more success. Value pricing is one price for all models of a vehicle with a set option package, regardless of the body style.

Although Strauss is a proponent of value pricing, he said there are potential hazards.

He said manufacturers must include a profit for dealers — he suggests a 10 percent gross profit on a vehicle. And he said dealers should avoid undercutting each other.

"When Ford introduced value-pricing on the Escort for $9,999, it was a good value," he said. "But the dealers weren't satisfied, and immediately started cutting the price. Customers got confused because national advertising and local advertising didn't tie in."

Since Strauss took office in February, he has witnessed several important milestones for dealers.

Ford took a leadership role by hiking the markup for parts replaced under warranty to 35 percent from 30 percent on 1993 models and 40 percent on 1994 models. That was followed by Toyota Motor Sales U.S.A. Inc.'s decision to pay 45 percent on 1993 models.

Manufacturers are resolving the program car dilemma by reducing the volume of rental fleet vehicles, thus raising the mileage on program cars and making them less of a threat to a new-car sale.

Strauss hopes to resolve the tax dilemma dealers face when selling extended service contracts. He said NADA is close to a settlement with the Internal Revenue Service that will help dealers.

But his main concern is to tell dealers that the industry is undergoing change, and they must look hard at some of their practices so they can start making a profit in their new-car departments.

Says Strauss: "If dealers continue to lose money in their new-car departments, then the number of dealers will continue to dwindle. We can't stay in business when the largest revenue producer in the dealership operates in the red."

GM PRICE

Overall increase averages 1.6%

continued from PAGE 1

percent range we're seeing from Ford and Chrysler."

GM's pricing strategy was apparent. The 1993 prices on the mid-sized Pontiac Grand Prix are unchanged from final 1992 prices, while Chevrolet concentrated the Lumina price increase on the coupe. Chevrolet made the V-6 engine and air conditioning standard on the coupe, driving the price up by $1,490. Prices on other Lumina models are unchanged.

The price increases on the Buick Regal were modest, but hikes on other mid-sized cars were substantial. Buick Century Custom sedan was increased $1,150, and Oldsmobile Cutlass Ciera S sedan rose $1,444. Prices on Oldsmobile's Cutlass Supreme S sedan and coupe remain unchanged while the Cutlass Supreme International was increased by $1,004.

Chrysler Corp.'s 1993 Dodge Intrepid, Eagle Vision and Chrysler Concorde are coming, and Ford Taurus and Mercury Sable already have a comfortable niche.

While Chrysler's LH sedans and the Taurus/Sable duo have airbags, GM's carryover Lumina, Cutlass Supreme, Regal and Grand Prix won't be equipped with airbags until the 1994 model year.

Prices on the Chevrolet Cavalier and Pontiac Sunbird were reduced. For example, the price of the Sunbird LE coupe was lowered $238 and the Cavalier sedan was slashed $579. The price on the Cadillac Fleetwood was lowered $2,370.

Popular-selling models that got hefty price increases included the Pontiac Bonneville SSEi, up $1,399, and the Cadillac Seville STS, up $2,515.

Chrysler ups incentives on 3 '91 models

ARLENA SAWYERS
Staff Reporter

Chrysler Corp. increased incentives on three 1991 models and is offering retail buyers optional equipment at no extra cost on some 1992 models.

From Aug. 13 through Oct. 31, the company is offering at no extra charge seven items of equipment — air conditioning, tilt steering wheel, automatic speed control, two extra speakers, floor mats, electric rear defroster and tinted glass — on 1992 **Plymouth** Acclaim, **Dodge** Spirit and **Chrysler** LeBaron.

The equipment, valued at $1,605, is in addition to the national rebate of $1,000.

Also, Chrysler increased consumer rebates on 1991 Acclaim, Spirit and LeBaron sedans from $1,000 to $1,500 until Sept. 30. The 1991 models are not included in the option incentive.

Cadillac is paying factory-to-dealer incentives on 1992 Eldorado and Seville, except STS, until Sept. 23. The incentives range to $1,500, based on the number of vehicles sold.

DEALERS

Changes ahead for GM's franchises

continued from PAGE 1

point, plus Pontiac-Buick and Oldsmobile-Cadillac, with a GMC Truck franchise at one of those two.

The GM dealer network planners have not endorsed assigning entire market areas to dealers, as Saturn Corp. has done, but the idea is under consideration.

Also being discussed internally is a plan to allow satellite locations for sales or service.

The company recently began discussing the conclusions of the study with dealers.

Dealers in Baltimore and Minneapolis have been briefed. In Baltimore, the study found most GM dealerships were inside the Beltway, where population and income has stagnated, and few in the outside suburbs, where population and income are growing and many key import competitors are situated.

Dealers familiar with Project 2000 who were interviewed for this story said they didn't feel threatened by GM's approach.

> "This is not a plan to punish dealers."
>
> NON-GM SOURCE

"This is not a plan to punish dealers or put them out of business," said a non-GM source familiar with Project 2000. "But if you know what's coming, you can make plans."

The dealers said they were approached with frankness and a detailed analysis of their market area. In some cases, dealers were told that if they don't move, their business won't survive.

Another source said some points are beyond help. Those owners may be counseled to avoid large capital investments and to prepare for life after their dealership goes out of business.

Roggenkamp and his group began the study more than a year ago when he was with the former Customer Sales and Service Staff at corporate headquarters.

Roggenkamp was assistant general sales manager at Chevrolet before he moved to his current job on Nov. 1, 1989. His 30-year GM career has included zone and regional assignments from Syracuse, N.Y., to Des Moines, Iowa, to California.

INCENTIVE WATCH — CUSTOMER INCENTIVES

HILLS

America's tough free trade negotiator

continued from PAGE 3

ereign actor," said one former trade negotiator, who, like other sources for this story, didn't want to be identified.

"The trade representative has to fit in politically. So if she acts, you know the wind is blowing hard and coherently behind her."

LAWYER BY TRAINING

It is Hills' style, more than her politics, that rankles some.

Conversations with a dozen acquaintances and former co-workers reveal a picture of a tough, competitive, sometimes thin-skinned workaholic who often shows up in her office across the street from the White House on Sundays.

Hills is a lawyer, not an economist or trade negotiator by training and profession.

"She is extremely well prepared, reads tons of briefing papers, and when she sits across from Japanese negotiators, she doesn't back down an inch," said a former trade office employee.

"But she's a details person, not a big picture person. She knows the issues she'll be questioned about or must negotiate, but she can get lost when she strays from her briefing paper or prepared text."

And she can be curt.

For example, during a recent round of free trade talks held outside Washington, both the Canadian and Mexican negotiators were complaining about Hills' attitude.

Concerns about Hills' style heightened as the last round of talks dragged on for two weeks.

"It takes a certain style to close a deal," the former negotiator said. "You have to be able to see the big picture, to give and take." He added, "She wants everything."

PRIVILEGED CHILDHOOD

Hills, 58, is used to the limelight.

She is the product of a privileged childhood. The family home in Los Angeles was grand enough to serve as the setting for the film "Sunset Boulevard."

Hills declined to be interviewed for this story. But she has described herself as a "tomboy" who sailed, rode horses and played varsity girls basketball and volleyball in private high school.

In 1955, Hills graduated with honors from Stanford University. where she was a champion tennis player. She earned her law degree at Yale University in 1958.

Hills first gained prominence nationally as secretary of Housing and Urban Development in the latter years of the Nixon administration. She was practicing anti-trust law when Bush tapped her as trade representative in 1989.

Like many who have spent most of their professional lives in Washington, Hills has been touched by scandal.

While providing legal counsel to a mortgage company in 1985, Hills met with Samuel Pierce, then HUD secretary. Pierce subsequently overruled a staff recommendation that the mortgage company be barred from further business with HUD. When the mortgage company later failed, HUD — and U.S. taxpayers — were left with a bill of nearly $800 million.

Hills was grilled for nearly six hours during Congressional hearings on the scandal in 1989. She defended herself, saying she had done nothing unethical, and that all she got out of the deal was $33,500 for 150 hours of legal work.

Kerkorian drops bid for board seat

MARY CONNELLY

Staff Reporter

Billionaire financier Kirk Kerkorian has dropped his bid for a Chrysler Corp. board seat — smoothing the way for Robert Eaton to uneventfully replace chairman Lee Iacocca Jan. 1, 1993.

Kerkorian, a corporate raider who is Chrysler's largest shareholder, questioned the management succession in a letter filed with the Securities & Exchange Commission Aug. 6. Specifically, Kerkorian said Iacocca's diminished corporate role after year end had prompted the request for board representation.

Kerkorian, who holds 9.8 percent, or 28 million shares, of Chrysler's common stock, reversed his stance and withdrew his request for board representation after meeting August 13 for more than an hour with Iacocca, chairman-designate Eaton and Malcolm Stamper, a Chrysler director and chairman of the board's nominating committee.

The meeting was held at the offices of Kerkorian's Tracinda Corp. in Beverly Hills, Calif.

"This was the first time Mr. Kerkorian had met with board members other than Mr. Iacocca. It was also his first meeting with Mr. Eaton," said Tracinda spokesman Gene Shutler.

In a statement, Kerkorian said he is "convinced that the interests of Chrysler's shareholders are being well represented by the current board."

Kerkorian said he is "comfortable" with Iacocca's plans to continue as a company director and chairman of the board's executive committee following retirement.

Kerkorian's spokesman acknowledged that Iacocca's chairmanship of the board's executive committee will be limited to one year. Iacocca had sought a longer tenure but was rebuffed by the board in July.

In his Aug. 6 letter, Kerkorian said he made the $300 million Chrysler investment because of Iacocca's "assurance that he would remain as chairman of the board through 1994."

In a letter to Kerkorian following the Aug. 13 meeting, Iacocca said he has "the utmost confidence" in Eaton.

He added he expects to "remain active in Chrysler's future and to continue to serve the best interests of the shareholders." AN

'92 build surpasses 7 million

GWENDOLYN ZONGHETTI

Special Correspondent

The 7 millionth vehicle in the U.S. and Canada was produced last Tuesday. In 1991, the 7-million mark was not reached until a month later on Sept. 9.

U.S. automakers produced 107,986 vehicles, up 20.2 percent from the prior week and 8.8 percent over the year-ago week.

Year-to-date U.S. car production totaled 3,500,004, up 4.8 percent from the same point last year.

Canadian carmakers assembled 20,808 autos last week, a jump of 57.3 percent over the prior week following one week of downtime at the Oshawa No. 1 and No. 2 car plants. So far this year, Canadian automakers have assembled 640,485 cars, down 4.9 percent from the same point in 1991.

Truckmakers in the United States built 77,578 vehicles last week, up 3.2 percent from the prior week and 9.6 percent over the same week of 1991.

Since the start of 1992, U.S. truckmakers have assembled 2,409,554 units, an 18.3 percent increase over last year.

Truck production in Canada last week was scheduled at 17,116 units, a 6.7 increase over the prior week and 7.4 percent over the corresponding week last year.

Year-to-date Canadian truck production is 619,041, 23.5 above the total at the same point last year.

The estimated daily build rate of cars and trucks in the United States and Canada last week was 44,698, up 15.0 percent over the prior week and 6.1 percent over the year-ago week.

Last week's scheduled car and truck production was shared as follows:

General Motors, 38.6 percent; Ford Motor Co., 27.8 percent; Chrysler Corp., 15.1 percent; Honda of America Manufacturing Inc., 4.8 percent; Nissan Motor Manufacturing Corp. U.S.A., 3.4 percent; Auto Alliance, 3.1 percent; Toyota Motor Manufacturing (U.S.A.), 2.6 percent; Subaru-Isuzu Automotive Inc., 1.4 percent; Diamond-Star Motors Corp., 1.2 percent; miscellaneous, 1.0 percent; Navistar International Corp., 0.8 percent; AM General, 0.2 percent.

GM's Lordstown, Ohio, car and truck plant has implemented a new operational plan starting today. The plant will begin working a seven-day work week with three shifts per day.

GM's Janesville, Wis., truck plant worked one shift of overtime last Friday and Saturday.

The company's Bowling Green, Ky., car plant lost a half-day of production last Wednesday, and was closed Thursday and Friday due to parts shortages.

Ford slated daily overtime last week at the Atlanta car plant and Louisville, Ky., truck plant.

Chrysler Corp. has no scheduled overtime this week. AN

Honda profits plunge 22%

TOKYO — Group net profits at Honda Motor Co. dropped 22.6 percent in the first quarter of the fiscal year that began April 1 as the company's worldwide car business continues to suffer.

Net earnings plunged to $131 million (16.5 billion yen) on a 3.3 percent decline in revenue to $8.73 billion. Group operating income dipped 18.6 percent to $325 million.

Honda blamed the fall in operating profits on a stronger yen and rising marketing, administrative and general costs.

Honda's automobile business accounted for revenue of $7.1 billion, a decrease of 5.3 percent.

Passenger-car sales during the quarter fell to 203,000 units in North America, down from 253,000, and sales dipped to 169,000 in Japan, down from 189,000.

European sales held at 52,000.

When Honda reported a profit decline of 14.9 percent for the last fiscal year, it forecast a 5 percent drop for the current year.

Japan to wait for Saturns

TROY, Mich. — Saturn Corp. will not export cars to Japan at least until the 1994 model year, when a right-hand drive version can be done economically.

Saturn is scheduled to redesign its interiors, installing standard dual front airbags in the process, for the 1994 model year. Sources said

Comeback car

A new attitude and approach helped Chrysler develop the LH in just 39 months. A special 36-page section follows Page 22.

Big 3 go easy on '93 stickers

2% average price hike puts pressure on Japan

JOHN K. TEAHEN JR.
Senior Editor

The 1993 price increase planned by the Big 3 is considerably less than that posted at the beginning of the 1992 model year, an analysis by *Automotive News* discloses.

The action puts pressure on the Japanese importers, most of whom have not priced their 1993 cars.

Based on preliminary figures from Chrysler Corp. and Ford Motor Co. and firm prices from General Motors, Big 3 cars will rise an average of $386, or 2.17 percent, over the final 1992 stickers. At introduction time a year ago, the Big 3 boost averaged $520, or 2.97 percent. The figures are sales-weighted and are based on comparably equipped 1993 and 1992 models.

Without credit for year-to-year equipment changes, Big 3 prices are up an average of $531, or 2.98 percent. A year ago it was $924, or 5.28 percent.

The Japanese makers are watching Detroit's pricing activities closely. The Japanese do their own thing on prices, but they cannot ignore the stickers of their domestic rivals.

Complicating the situation for the importers is the recession in Japan. It's every bit as brutal as the recession the United States is trying to crawl out of. The Japanese parent firms need the sales and dollars generated by their U.S. subsidiaries, and unwise pricing could jeopardize those sales and dollars.

The Japanese raised car prices midway through the 1992 model year, posting an aver-

Nissan Altima is priced to fight Accord, Camry

KRISTINE STIVEN BREESE and LINDSAY CHAPPELL
Staff Reporters

Trying to jolt dealers as they prepare to sell what Nissan calls the most important car in its history, Nissan Motor Corp. in U.S.A has put a $12,999 price tag on its new Altima sedan.

The sticker will make the Altima look good as Nissan tries to get the attention of shoppers looking at the Ford Taurus, Toyota Camry, Honda Accord and other cars in the ultra-competitive mid-sized segment. But even though the car has a driver-side airbag, it lacks a V-6 engine.

But the price tag may attract buyers who were left behind when the Toyota Camry moved upmarket in 1992.

"Every Nissan dealer in the country has been praying every night that they could price this

GM's Lopez scares ad agencies

RAYMOND SERAFIN
Crain News Service

J. Ignacio Lopez has turned his attention to the ad agencies that handle General Motors' $1.2 billion ad budget, and that's sending a shiver up the spine of agency officials.

In a mere four months as GM's vice president for worldwide purchasing, Lopez has attained fame — some call it infamy — for demanding and getting steep price cuts from GM material suppliers.

On the heels of a staggering $4.5 billion loss last year, GM management gave Lopez, formerly vice president in charge of supply for GM Europe, broad authority to attack costs.

Now, Lopez's zealous lieutenants have become increasingly involved in the contract bidding for marketing services such as catalog printing and direct-mail initiatives, according to *Advertising Age,* a sister publication to *Automotive News.*

Those ancillary programs have been the source of a significant part of GM agency profits ever since agencies took a cut in compensation in the late 1980s to 9 percent, down from 15 percent.

Lopez is said to have met earlier this month with Philip Guarascio, general manager of marketing and advertising for North American Operations. It's believed Guarascio, who keeps close tabs on GM agency profitability, tried to persuade Lopez that further deep cuts in agency compensation would af-

Next spring, Lexus dealers will get this Aristo-based sedan. It will be positioned above the ES300.

SLOWED, BUT NOT STOPPED

Asians have big plans despite political, financial pressures

Third in a series.

KRISTINE STIVEN BREESE
Staff Reporter

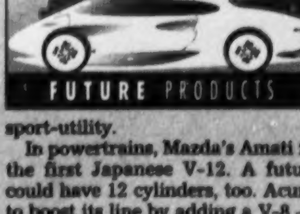
It used to be so easy. Asian automakers built high-quality, high-value vehicles, and Americans ate them up.

As recently as two years ago, analysts predicted that Japanese makes alone were bound to control 40 percent of the U.S. vehicle market. Now, their share is 24 percent and is shrinking.

That's due in part to recession and a "Buy American" campaign that seems to have real legs. Add to that some tightened purse strings in Japan, and it's clear that the future holds new challenges for the Asian automakers.

And lots of new product. Plans for the next five years show the Japanese bound for new heights in variety and innovation.

They will enter new segments. Toyota sets the tone this fall with its new intermediate pickup. Its next Cressida will likely be Japan's first six-passenger sedan sold here. A possible Honda entry promises to be a blend of minivan and sport-utility.



In powertrains, Mazda's Amati flagship will offer the first Japanese V-12. A future Lexus LS400 could have 12 cylinders, too. Acura appears poised to boost its line by adding a V-8 — either in a new

corrections

- The location for Southwest Chevrolet in a Page 23 item on Aug. 10 was wrong. The dealership is in Parker, Ariz.
- An Aug. 3 story on Page 22 incorrectly reported that J. Ignacio Lopez, General Motors vice president for purchasing, has authority only for manufacturing contracts. A GM spokesperson said Lopez's authority covers all purchasing. The spokesperson also said that although Electronic Data Systems Corp. computer-services work for GM will not be opened for competitive bidding, EDS will be subject to cost cutting based on "competitive benchmarks" GM is establishing.

Dodge van gets new look for '94

Dodge will give its full-sized van a more aerodynamic look up front for the 1994 model year. This spy photo shows changes that include flush-mounted headlamp units and grille treatment similar to that seen on prototypes of the forthcoming T-300 full-sized pickup. A short run of 1993 model vans is set to end in December, with 1994 production to start early next year.

Hino to build T100 for Toyota

TOKYO — Toyota Motor Corp. said the forthcoming T100 pickup truck destined for U.S. sale this fall will be built initially by Hino Motors Ltd. at its Hamura plant in Tokyo.

Last year, Hino built 245,000 Hi-Lux pickups for Toyota at Hamura. Toyota owns about 10 percent of Hino outright, and it is considered a Toyota affiliate.

The T100 is expected to be built in the United States within two to three years.

2 Ford recalls affect 533,000

DEARBORN, Mich. — Ford Motor Co. has recalled about 99,000 Lincoln Continentals (1988-91 models) to replace front brake rotors that are subject to corrosion.

Ford also has recalled about 434,000 of its 1988-90 Ford Taurus, Mercury Sable and Lincoln Continental cars equipped with 3.8-liter V-6 engines to correct excessive exhaust emissions.

The brake rotor problem affects Continentals in the Northeast or Midwest, where salt is used to de-ice roads. Severely corroded rotors may break from the hub, which increases stopping distances.

In the exhaust emissions recall, dealers will modify the evaporative emissions control system. About 16,000 of the affected vehicles are in Canada.

Navistar loss up to $182 million

CHICAGO — Navistar International Corp. lost $115 million on sales of $920 million for the third quarter of fiscal 1992 ended July 31, compared to a loss of $31 million on sales of $861 million a year earlier.

The company lost $182 million on sales of $2.7 billion in the first nine months of fiscal 1992, compared to a loss of $98 million on sales of $2.6 billion last year.

The rise in Navistar's third-quarter loss resulted chiefly from a $24 million charge to handle the voluntary recall of school bus chassis and a $65 million charge to settle litigation with Pension Benefit Guaranty Corp.

The litigation involved Navistar's pension liability for its former Wisconsin Steel Division.

Lordstown may cripple Saturn

Saturn Corp. could be forced to shut its Tennessee assembly line if General Motors' Lordstown, Ohio, metal fabricating plant strikes following its five-day strike notice issued Thursday.

Lordstown supplies Saturn with small metal parts, and Saturn spokesman Bill Betts said the plant's just-in-time parts system is "very fragile." Saturn keeps as little as 10 hours' worth of some parts on hand.

A shutdown would hurt sales, because Saturn dealers are already short of cars.

At issue in Lordstown is a GM plan to close a tool and die shop, subcontracting the skilled trade work, and various health and safety problems, said a UAW spokesman.

— Liz Pinto

U.S. estimates costs 3 ways

WASHINGTON — Government agencies need a standard method for estimating the effects of new regulations on the cost of a new car, says Congress' General Accounting Office.

Cost estimates from government bureaucrats often differ significantly from the estimates prepared by automakers, the report said.

Different agencies have responsibility for different regulations: EPA for emissions, NHTSA for safety, and three agencies — NHTSA, EPA and the Energy Department — for fuel economy. Each estimates costs differently, and the three rarely consult one another when implementing regulations, the report said.

The accounting office recommended that the government develop a single method for estimating costs and publicize it.

The report was prepared at the request of Rep. John Dingell, D-Mich.

— Max Gates

34% profit dip seen for Toyota

TOKYO — Toyota Motor Co. is set to announce a 34 percent decline in pre-tax profits to $3 billion (380 billion yen) on revenues of $71.4 billion for the fiscal year that ended June 30, according to Japanese financial press reports.

The company refused to comment on the reports, but one insider said the figures "are not too wrong."

The top Japanese carmaker is also expected to announce that it will cut capital spending from $4.5 billion to $3.2 billion for the new fiscal year.

Toyota will announce year-end results Wednesday.

— Richard Johnson

GE Capital buys Avis Europe

GE Capital Fleet Services has completed its acquisition of Avis Europe's vehicle leasing and fleet management business for an undisclosed price.

Avis Lease, based in Brussels, has assets of about $950 million. GE also bought the rights to use the Avis Lease name.

The acquisition is part of GE's expansion into the European market. GE will be able to serve corporate fleet needs in 14 European countries.

GE Capital, based in Stamford, Conn., is a subsidiary of General Electric Co. and is a diversified financial company with assets exceeding $80 billion.

— Charles M. Thomas

briefly

Chrysler plays beat the clock

Tom Gale, **Chrysler Corp.** vice president of product design, told journalists attending the LH sedan preview in San Diego that Chrysler will set a new standard for fast prototyping of car parts. Gale said the hood for the new JA compact due in 1996 went from concept to finished steel part in 109 hours. "When we first discussed this project, our people were thinking in terms of days," he said. "I told them to recalibrate themselves. We were going to put a watch on it and measure it in hours."

MORALLY PURE — **General Motors'** top executives are considering a new policy to ban employees from accepting gratuities from customers, dealers and suppliers. The proposed plan is "to make sure ethical practices are maintained," a spokesman confirms. He said he was not aware of any problems that led to the policy review. Until now, GM employees have been allowed to keep tokens of appreciation worth no more than $25 from business associates, but the proposal would ban even free lunches.

HOPEFUL FORECAST — "It is certain that **Oldsmobile's** 100th anniversary will be even brighter!" So wrote **GM** Chairman Robert Stempel and President Jack Smith last week in a full-page ad in *The Wall Street Journal* and other publications. They were congratulating Olds employees, dealers and customers upon the division's 95th anniversary. Still, sales and market share continue downward. Maybe by the 100th anniversary, things will look up for Oldsmobile.

FOREVER YOUNG — Sources say **Nissan Motor Co.'s** facelift for the Infiniti Q45 early next year will include a nose job. The unique badge on the hood that caused so much criticism when the car debuted in 1990 is expected to be replaced with a more traditional design.

FOND FAREWELL — **Chrysler** chief Lee Iacocca will bid adieu to the company's dealers this week. An estimated 10,000 people, including dealers from the United States, Canada, Mexico and overseas, are gathering in Las Vegas for the company's 1993 new model send-off. But the meeting will also be a send-off for Iacocca, who will retire at year-end. Thursday evening, Iacocca will speak to the dealers for the last time as Chrysler's chairman.

FOOD FOR THOUGHT — At a gathering of auto suppliers, Norman Ehlers, vice president of purchasing and supply at **Ford Motor Co.**, took a good-natured swipe at **GM's** new worldwide purchasing vice president J. Ignacio Lopez. Lopez has issued a booklet to his troops titled, *Feeding the Warrior Spirit*, which points out, "This planet has 70 percent water content. Your body has 70 percent water content. You must consume a diet based on foods with 70 percent water content." Tongue-in-cheek, Ehlers said he and Tom Stallkamp, **Chrysler's** vice president of procurement and supply, are putting out a cookbook called *Tom and Norm's Recipes for Worn-Out Warriors*. "They're recipes with 70 percent solids and 30 percent water," quipped Ehlers.

Ehlers: dishing it out

Freightliner chief expects rise in orders

JOSEPH BOHN
Truck Editor

Truck orders in the 1993 model year will be bigger than they have been for a while and more evenly spaced throughout the year, according to Freightliner Corp.

President Jim Hebe attributes the Class 8 sales surge to a reviving economy, larger fleets coming back into the market and strengthening used-truck demand. The company climbed to the top spot in Class 8 sales this year.

There is even something of a shortage in certain used trucks because of the low number of new models built over the past few years, Hebe said.

That is pushing prices up and allowing new-truck buyers to trade and replace vehicles they hadn't been able to before.

Some of the larger fleets are now placing 1993 orders — but spreading delivery dates out as long as 12 months.

"We're seeing larger purchases, but seeing them extended over a longer period of time," Hebe said.

"The big fleets — and even some of the smaller ones — are doing a better job of planning their equipment replacements. Instead of ordering 200 trucks and taking them all in one month, they're planning their replacement cycle in an orderly fashion." Hebe said.

Freightliner has a new 70-inch Raised Roof SleeperCab, a 58-inch SleeperCab and a 50-inch Walk-in Sleeper Box.

The 70-inch sleeper will go into production in November. But, after previewing it to selected fleets that run team operations, Freightliner sold out its November/December production of the unit, Hebe said.

The company is now trying to increase materials purchases to bump up production to 20 to 30 units a day from the original plan of 10 per day.

Based on Freightliner's normal 240 working days, that could mean sales of up to 7,200 units.

Freightliner also has big plans for its Class 6-7 Business Class trucks.

The company has an aggressive schedule of timed production increases that will take it to an annual rate of 4,000 medium duties by the end of calendar 1992.

Freightliner began the year building 10 Business Class trucks a day and will be up to 17 a day by December. Calendar year 1993 will see further, steady increases, Hebe said.

Most of Freightliner's medium-duty sales have been in Class 7. Leasing companies and vocation operators are the chief customers.

Freightliner is now offering new engine, axle and chassis options to appeal to niche vehicle markets like fire apparatus, public utilities, construction and refuse hauling.

The Business Class trucks now offer all Cummins' C 8.3-liter horsepower ratings and additional ratings for Cummins' B 5.9-liter.

They also offer Rockwell's RS-13-120 13,000-pound rear axles, Hendrickson air suspensions with 12,000-pound and 15,000-pound capacities, and Freightliner Air-Liner rear suspensions rated at 20,000 pounds capacity on single rear axles and 40,000 pounds capacity on dual rear axles.

Other options include additional Allison automatic transmissions such as the AT-545 and AT-542, plus Freightliner/WABCO antilock brakes and front power take-off enhancements. ■

Fruehauf sets up Asian venture

SOUTHFIELD, Mich. — Fruehauf Trailer Corp. has established a joint venture with Shunde Guang Lian Hong Communication Machinery Manufacturing Co. Ltd. in China to produce trailer axles for Pacific Rim markets.

The new company, Shunde Pro-Par Axle Co., will assemble Fruehauf's Pro-Par axles in the city of Shunde for use on the container chassis that Shunde Guang Lian Hong produces and markets to the Pacific Rim.

Arthur Rowe, Fruehauf president and chief executive officer, said a 70,000-square-foot assembly plant is being constructed and will start production early in 1993.

Within several years, the venture is expected to produce 40,000 trailer axles annually.

Volvo GM sees hardier trucks

GREENSBORO, N.C. — Volvo GM Heavy Truck Corp. expects improvements in truck design, maintenance and communication systems to reduce the downtime on a typical linehaul tractor-trailer combination to 25 hours a year by 2000 from the current 45-hour average.

Per Lindquist, vice president of product planning and communications for Volvo GM, also believes that heavy trucks will run nearly 1 million miles without a major engine overhaul.

Truckers plan safety parley

ALEXANDRIA, Va. — The Safety Management Council of the American Trucking Associations will hold its national meeting and exhibit program Sept. 27-29 in Atlantic City.

From 1980 to 1988, a total of 46,654 trucks over 10,000 pounds gross vehicle weight were involved in fatal accidents, according to a University of Michigan Transportation Research Institute study released in June.

In 1980, there were 5,056 such accidents compared to 5,467 in 1988. Some 72 percent of the 1988 fatalities involved tractors. The balance were straight trucks, the study found.

The 1988 accidents resulted in 6,431 fatalities, 787 of which were truck drivers

Buick offers service rides

DALE JEWETT

Service Editor

Buick is inaugurating a courtesy program for buyers of 1993 models who bring their cars to the dealership for service.

Under the Buick Courtesy Transportation program, dealers will provide rides up to 10 miles from the dealership for customers who are having minor repairs.

If the repair requires the dealership to keep the car overnight, dealers will provide a free courtesy car, or alternative transportation such as a taxicab or bus ride costing up to $30 per day, until the repair is complete.

To be eligible, the vehicle must be purchased as a new 1993 retail model and be within the 3-year/36,000-mile warranty.

Buick is strongly encouraging its dealers to participate in the program, a company spokesman said, but enrollment is voluntary.

"Many dealers are already providing this service," the spokesman said. "This gets us behind that effort even more."

For the same-day ride service, Buick will reimburse dealers $5 for each customer.

For service loaner cars, Buick is encouraging dealers to provide a late-model car or work with a rental agency. Buick will reimburse dealers up to $30 a day for five days for the loaner.

The program is similar to programs now offered by Cadillac and Oldsmobile dealers.

NO STARTS...for "would-be" thieves!

Magic-Touch anti-theft system is a simple, effective device which works on any vehicle with an electric starter. The system interrupts the starter circuit with a tape switch which activates a Bosch relay system. Absolutely nothing to do when you leave the car... when you want to start the car, simply press the hidden tape switch while turning the key. Magic-Touch uses no power from the battery. Simple installation... less than an hour.

European car sales fall 15.4% in July

ANNE E. WRIGHT

Chief Statistician

European passenger car sales in July dropped for the third consecutive month.

According to *Automotive News* estimates, July sales in the 17-nation European market were 1.1 million, down 15.4 percent from the 1.3 million units sold in July 1991.

Nearly every manufacturer reported double-digit sales declines. Beyond Saab's 5.7 percent rise, the few other gains were scant.

At the top of the market, Volkswagen lost 14.2 percent.

At the bottom, Daihatsu slipped 45.8 percent.

Germany, Europe's biggest market, plummeted 36.9 percent from 1991 levels. July was Germany's largest year-to-year decline in a seven-month skid.

Sales in Spain rose 5.8 percent from a year earlier to 106,000; Italy rose 4.1 percent to 224,000; and France was up 0.4 percent to 224,100.

Britain, the fifth largest market in Europe, fell 8.3 percent in July; sales are off 4.3 percent for the year.

Europe-wide sales for the first seven months were 8.5 million, off 3.3 percent from a year earlier.

Chrysler reads the minds of prospects

ARLENA SAWYERS
Staff Reporter

JIM FRENAK

LH will stretch upscale in 1994 with the New Yorker line. A chrome-accented New Yorker will likely be aimed at traditional buyers. The LHS luxury sport sedan is expected to resemble the concept car.

Chrysler Corp. believes it has identified three distinct slices of the mid-sized car market and has an LH sedan for each one.

The long-awaited LH triplets — the Eagle Vision, Dodge Intrepid and Chrysler Concorde — have been the subject of many consumer clinics and are probably the most carefully researched vehicles in Chrysler's history.

Though the three cars are quite similar from sheet metal to cab-forward design to suspension, Chrysler plans to market them with three unique personalities:

Vision is viewed as the sporty, sophisticated answer for import intenders, while Concorde is expected to find its niche among older, upscale buyers. Intrepid, designed to have the broadest appeal of the three, will target "traditional" families, whose transportation needs range from mom's taxi to dad's performance roadster.

From a demographic standpoint, prospects for all three LH models are similar.

They are married, 35 to 50 years old with an annual household income of $35,000 to $75,000, and many own an import or are import-oriented.

Research went beyond demographics into psychographics, the study of lifestyles and attitudes.

"We had to find out what people wanted; we knew we were moving into a new market," said Dave Bostwick, director of business planning and research at Chrysler.

"We needed to break into the baby boom market, and concentrate on people who will buy these cars over the next 10 years."

Chrysler tapped those differences by conducting qualitative and quantitative consumer clinics last fall in Chicago and Anaheim, Calif.

The clinics focused on such attributes as price, equipment, styling, handling and how the consumer perceives Chrysler and its various brands vs. the competition.

Bostwick said the company conducted "driving situation" tests in which consumers were paid $50 to $100 to drive and evaluate LH cars and competitive cars such as the Audi 80, Mazda 929, Nissan Maxima, Chevrolet Lumina and Ford Taurus.

Bostwick said Chrysler used consumer feedback to determine that LH's tighter suspension was appropriate and to locate the child safety seat in the center of the rear seat.

"People want a high level of quality and safety," he said.

"The best cars used to be a cushy, floating ride. Now, buyers want something much tighter. They're not looking at how fast it goes from 0 to 60 mph; they are looking at how the car drives. Baby boomers now define the market."

During one clinic last December, Chrysler exposed a group of consumers to the three LH cars and to several competitive cars, among which were the Honda Accord, Ford Taurus, Toyota Camry and Pontiac Bonneville.

"We wanted to quantitatively see what they perceived the image to be, their estimation of the cost, and whether they would consider buying it," said Wally Anderson, Dodge marketing plans manager.

"We had a separate group when we qualitatively explored the position we planned to use in advertising and marketing."

Additionally, each division conducted separate research that yielded a generic composite buyer-couple for each division.

Eagle was the only brand that sent researchers into the homes of consumers, said Larry Baker, Jeep-Eagle general manager.

The research was conducted by Campbell-Mithun-Esty, the advertising agency for Jeep-Eagle, which had conducted similar research for Jeep several years ago.

While neither Baker nor the ad agency would disclose details of the study, Baker said researchers went into about 100 homes of consumers who liked the LH cars in general and the Vision in particular.

The purpose was to find out what is important to potential Eagle buyers by observing how they live, work and play.

"We noticed the pictures on the walls, the books on the shelves, the TV programs they watched and what they did in their spare time," Baker said. "We looked for a common thread."

As it turned out, there were several, he said.

Vision prospects are the yuppies of the LH prospects. They are more likely than other LH prospects to own an import. They live for their work. They are health conscious, eat out twice a week and shun prime time network TV in favor of cable TV, books and magazines.

"They don't stand out from the crowd; they stand away from the crowd," Baker said. "They don't worry about keeping up with the Joneses; they think of themselves as the Joneses.

"They see themselves as unique; we see them as unique. We think we know these people."

To get a handle on their potential customer bases, Dodge and Chrysler turned to Prizm, a data-based system that enabled them to study the lifestyles and purchase patterns of prospects.

The two divisions also used geo-demographics — the linking of people within certain geographic areas — on the premise that people of similar age, income and buying attitudes gravitate to the same areas.

Dodge marketers believe the Intrepid will find its audience among families who proudly consider themselves part of the mainstream.

Intrepid prospects see work as a means to an end — to support the family.

Family activities such as soccer practice and Little League baseball dominate their lives.

They eat out twice a month and watch prime time TV almost every night.

"They have strong traditional moral values," said Anderson, Dodge marketing plans manager.

Chrysler Concorde prospects are the oldsters of the group. Many are upscale "empty-nesters" who have outgrown the minivan, but still need more car to accommodate elderly parents.

They watch prime time TV regularly, are avid gardeners and prefer taking car trips when visiting their college-aged children.

"The cars clearly change the image of the brand and the company," said Steve Torok, Chrysler-Plymouth general manager.

"We are redefining what luxury means to our buyers. The new definition is detail to fit and finish and being more in touch with your environment.

"We're selling a new Chrysler, a new approach. This is not business as usual." ■

LH CUSTOMER PROFILES

Eagle Vision
- Yuppies
- Health conscious
- Live for their work
- Eat out twice a week
- Favor cable TV, books, & magazines

Chrysler Concorde
- Older, upscale
- Empty-nesters
- College-age children
- Avid gardners
- Favor prime time TV

Dodge Intrepid
- Traditional families
- Main stream lifestyle
- Family activities
- Eat out twice per month
- Watch prime time TV everynight

PRICES

Big 3 increases average 2 percent

continued from PAGE 1

age increase of $441, or 2.8 percent, last spring. The Big 3 did not hike prices at that time, thus the Japanese are one price increase ahead of the Americans.

Late last week, Mazda Motor of America Inc. was the only major Japanese importer that had priced its full line of 1993 cars. Mazda vehicles went up an average of $422, or 2.9 percent.

The current Big 3 numbers may change a bit before the official introduction dates, but the pattern is firm. Chrysler and Ford have labeled their prices "preliminary" or "pre-introductory." Last year, Chrysler and Ford reduced their early prices before introduction day.

Only Chrysler shows a bigger increase than last year. Its preliminary hike is $403, compared with a meager $138 a year ago. The new LH sedans are not included in the analysis since they had no 1992 counterparts.

Ford's increases, with allowances for year-to-year equipment changes, are $506 for 1993 and $590 a year ago; GM's are $313 and $570.

All figures in this article are sales-weighted, both for the individual companies and for the Big 3 as a group. Sales-weighting means that the increase on each car line is balanced against that line's share of the company's total sales. In sales-weighting the Big 3, each maker's share of total Big 3 new-car sales is part of the procedure.

The GM announcement on Aug. 13 probably sent the Ford and Chrysler price gnomes back to their abacuses. GM sprung a surprise by posting a hike of 1.60 percent; it was lower than had been anticipated. Earlier, Ford had said 2.90 percent, and Chrysler had said 2.60 percent.

GM's 1.60 percent does not include Saturn. Factoring Saturn into the equation makes the GM boost 1.66 percent.

GM no longer holds the commanding position it once enjoyed in pricing and other automotive matters, but its rivals — both domestic and import — are still wary of twisting the General's tail. Ford and Chrysler have a month to study their stickers before their official 1993 intro dates.

The Big 3 figures in the *Automotive News* analysis show the effect of equipment shifts on a company's pricing activities.

Chrysler's adjusted and unadjusted numbers are about the same, but Ford has a boost of $673 before adjusting for 1993 equipment tinkering and $506 after making the allowance. GM's increases are $477 before and $313 after.

A year ago, the comparisons for the three makers were: Chrysler, up $138 adjusted and $507 unadjusted; Ford, $590 and $903; GM, $570 and $1,032. The Big 3 added more items to the standard equipment last year than they will for 1993.

The 1993 Chevrolet Lumina two-door sedan is a good example of the equipment-switch game. That model went up $1,490 (11.29 percent), while other Luminas didn't go up a dime. But a V-6 engine and air conditioning are standard equipment on the 1993 two-door. As options for 1992 (total price $1,490), each had an installation rate of more than 95 percent.

For most Lumina buyers, the two-door hasn't gone up at all. But for those who can get along very nicely without air or V-6 power, the price is up a heap. Maybe enough to keep the buyer out of the market entirely, or at least to propel him to the showroom of another make.

Five vehicles fare poorly in government crashes

MAX GATES
Staff Reporter

WASHINGTON — Five of nine 1992 vehicles in the government's latest 35-mph crashes showed possible serious head injury to the driver or front-seat passenger.

The Hyundai Elantra sedan had head-injury scores of 1,345 for the driver and 1,240 for the front passenger. Scores of 1,000 or above indicate that serious head injury is possible, says the National Highway Traffic Safety Administration.

The Elantra also recorded a driver-chest injury score of 70. A score of 60 or above indicates that chest injury is possible.

The Oldsmobile Achieva had a driver head-injury score of 2,021. Also scoring over 1,000 were the Isuzu Trooper, Nissan Pathfinder and Ford Ranger.

Two vehicles scored at levels where serious head, chest or leg injuries are considered unlikely. They were the Mazda B2200 pickup and the Hyundai Excel sedan. The Ford Festiva also fell into that range, but its results were incomplete because of missing head-injury data.

None of the nine vehicles crashed in the latest phase of the New Car Assessment Program had an airbag. In the program, NHTSA will crash 35 vehicles from the 1992 model year.

The consumer information program is designed to detect differences in frontal-crash protection.

HEAD-INJURY SCORES

(Over 1,000 indicates possible serious injury)

	Driver	Passenger
Ford Festiva	NA	477*
Hyundai Excel	520	544
Plymouth Colt Vista	920	362*
Hyundai Elantra	1,345	1,240
Oldsmobile Achieva	2,021	343
Nissan Pathfinder	1,211	817*
Isuzu Trooper	1,219	1,258
Mazda pickup	535	424
Ford Ranger	1,009	415*

*Indicates head did not strike interior surface
Source: NHTSA

The Hyundai Elantra sedan registered head-injury scores of 1,345 for the driver and 1,240 for the front passenger.

Vehicles are crashed head-on into a barrier at 35 mph. The crash produces 36 percent more energy and injury potential than the 30-mph frontal crash tests that all new cars are required to pass under federal safety standards.

NHTSA says comparisons should be made only among vehicles within a weight range of 500 pounds.

Smyrna adds V-6 engine to output of cars, trucks

LINDSAY CHAPPELL
Staff Reporter

SMYRNA, Tenn. — Nissan Motor Manufacturing Corp. U.S.A. begins commercial production this week of the first V-6 to be built by a Japanese manufacturer in the United States.

Nissan can build as many as 135,000 of the engines a year. They will be used in the Mercury Villager/Nissan Quest minivan assembled by Ford Motor Co. in Avon Lake, Ohio. Nissan will supply up to 50,000 for the Quest; the rest will go to Ford for the Villager.

Production of the Quest/Villager began in April. Nissan has been supplying the V-6 engine from a plant in Japan.

The V-6 is one of two important new products for the Smyrna plant. This week, Nissan dealers will receive their first shipments of the new Altima sedan. It goes on sale Sept. 1.

The addition of Altima production this summer makes Smyrna the nation's largest auto factory under one roof. Smyrna now has an annual capacity of 450,000 units. Ford's Explorer/Ranger plant in Louisville, Ky., built about 420,000 in the 1992 model year.

The $475 million expansion that was completed this summer gives Nissan a plant that can build up to 125,000 Sentras a year, 125,000 compact pickups, 200,000 Altimas, 125,000 four-cylinder engines and 135,000 V-6s. It also builds steel panels for all vehicles made at Smyrna, Avon Lake and Nissan's plant in Cuernavaca, Mexico.

Nissan last week completed hiring for 2,000 new jobs at the plant, which now employs 5,600.

Two shifts of employees are currently working side-by-side on the Altima, so workers can learn from each other and catch mistakes. Those shifts will be separated into day and night crews by the first week of September.

The plant is building about 260 Altimas a day and plans to reach 800 a day during 1993.

The Smyrna plant is also adopting new technology in its body assembly and paint operations.

In body work, Nissan has introduced a robot-controlled "intelligent body assembly system," an automated welding line that can correct alignment errors and adjust to eight different models in simultaneous production.

Nissan uses the technology at some plants in Japan, but this is the first application in North America.

In paint work, the 11-year-old Smyrna plant has devised a system for applying water-based topcoat paints electrostatically — paint technologies that are usually considered virtual opposites. Since water-borne paint conducts electricity, manufacturers have avoided applying it with electrostatic tooling, both as a safety measure and to avoid short-outs.

Jerry Benefield, president and chief executive officer of Nissan Motor Manufacturing, said the Altima launch "is going better than any launch we've everhad."

ALTIMA

Dealers hail intro price

continued from PAGE 1

car low enough to get us into the market. I think this is really going to help," said C. Harrell Schaeffer, president of Bluff City Nissan in Memphis, Tenn. "Price is everything, no matter what anybody says."

The cheapest 1992 Camry sedan, a four-cylinder, goes for $14,798. That Camry model and the $12,999 Altima XE have manual transmissions.

Nissan is counting on the Altima to make Nissan a significant player in the heart of the market. The Altima, which is smaller and narrower than the Accord and Camry, replaces the Stanza, whose 1991 sales totaled 73,475.

But Nissan executives and dealers admit they won't sell many base Altima models, even though they have a driver-side airbag, tachometer and tilt steering wheel. Most buyers in that segment want air conditioning, an AM/FM stereo cassette and cruise control.

Earl Hesterberg, general manager of Nissan Division, said the bulk of Altima's production and sales will be the mid-trim GXE model, which starts at $14,024. With an option package that includes a cassette stereo, air conditioning, cruise control and power windows and door locks, the price is $15,024. Adding automatic transmission makes it $15,849.

A similarly equipped 1992 Honda Accord LX sedan with automatic transmission is $16,850. Honda's 1993 prices are due next month. A similarly equipped 1992 Camry LE is $17,498.

The most expensive Altima, the GLE, carries an $18,349 sticker. That compares with $19,428 for the top-of-the-line, four-cylinder 1992 Camry XLE and $19,270 for the high-trim 1992 Accord EX with automatic transmission.

"With this pricing for Altima, we know that whatever (Honda and Toyota) do, we'll be fine," Hesterberg said after making the announcement to dealers in Nashville, Tenn., last week.

> ‘We wanted to jolt people. We want to position this car as an uncommon value. The dealers are pumped.’
>
> **EARL HESTERBERG**
> NISSAN GENERAL MANAGER

"We wanted to jolt people. We want to position this car as an uncommon value. The dealers are pumped," Hesterberg said.

And pumped they were.

"The Camry has been hurting us pretty bad," said Kenneth Griffin, a Nissan dealer in Sterling, N.C. "This is going to help us a lot."

Nissan has taken some knocks for not offering a six-cylinder engine (the Honda Accord doesn't have one either) and for the Altima's size relative to the new Camry. The Altima has a 2.4-liter, four-cylinder engine, and it is three inches narrower and seven inches shorter than the Camry.

Clearly, Nissan hopes to make up for Altima shortfalls with price.

"I just built a brand-new Nissan store, and I was thinking, 'A four-cylinder? I hope we don't fall on our face.' But with this pricing, I think we'll be fine," said Mark Lacher, general manager of Koeppel Nissan in Jackson Heights, N.Y. "This is the '90s, not the '80s. I think the times are right for a four-cylinder, for value."

Other dealers appreciated the pricing ploy, even if it proves to be temporary.

"Even if it's only a marketing move to help establish our position in the marketplace, they're doing the right thing," said Jerry Heuer, general manager of Torrance Nissan in Torrance, Calif. "I'm impressed."

Hesterberg said he's determined to stick with this price as long as possible.

Hesterberg said the Altima launch strategy is modeled after the 1988 introduction of the Maxima, which he called "our most successful launch ever." The strategy includes staying away from incentives as long as possible and holding the price.

Infiniti hikes freight charge

CARSON, Calif. — Infiniti Division of Nissan Motor Corp. in U.S.A. has increased the destination charge 12.5 percent, effective Sept. 1. The freight charge will be $450, up from the current charge of $400.

Infiniti also hiked the price of its G20 four-door sedan $400 for the 1993 model year. The G20 will be $19,500, up from $19,100. Automatic transmission is $900 extra, the same as in 1992.

Lexus ads cite upgrades

TORRANCE, Calif. — Lexus will use the fall introduction of a restyled LS400 to hammer home its dedication to continuous improvement, according to *Advertising Age*, a sister publication to *Automotive News*.

The campaign scheduled to break in October will show how the company listened to its owners in updating the model, said J. Davis Illingworth, Lexus general manager.

"We'll show customer letters where a customer asked for something, and here it is," he said. Team One of El Segundo, Calif., handles Lexus advertising.

Among the improvements to the $40,000-plus sedan are the addition of a passenger-side airbag, a new pocket-size portable car phone that operates on voice command, and a new air conditioning refrigerant.

Pickup base	$800-1,000, quota
Other pickup	$300-500, quota

Toyota tries another lean-burn

RICHARD JOHNSON
Staff Reporter

TOKYO — Toyota Motor Co., which struck out with a lean-burn engine in the Japanese market several years ago, is back with a new, improved unit first used in Europe and mated to an automatic transmission for the first time anywhere.

The four-door Carina sedan, spun off from the new, mid-sized Corona launched last winter, has a 1.6-liter, twin-cam, four-valve, four-cylinder engine that uses the first mass-produced combustion pressure sensor, Toyota said.

The sensor directly monitors combustion from the pressure inside the cylinder and adjusts the fuel intake. The result, according to Toyota, is stable combustion at a lean air-to-fuel ratio and lower emissions of oxides of nitrogen.

Toyota's previous lean-burn engines met Japanese emission standards only when offered on small cars with manual gearboxes. But the company says the Carina's 4A-FE engine is capable of high performance and response and meets emission standards even when coupled with an automatic.

The new lean-burn unit was introduced in Europe in May with the launch of the Carina E. In Japan, Toyota expects to sell about 8,500 Carinas monthly, but only about 1,200 figure to be equipped with the lean-burn powerplant.

In 1984, Toyota offered its first-generation 4A-ELU lean air-fuel ratio engine in Japan. However, only about 1,000 units sold in four years and the company pulled the engine from the market. Toyota blamed the lackluster response from customers on poor performance. A second-generation lean-burn introduced in 1987 has been sold in Europe only.

"We wanted to market a lean-burn engine that people want to buy," said spokesman Hiroshi Hashimoto. The driveability of this engine is comparable to conventional gasoline engines.

The Carina lean-burn offerings are capable of 105 horsepower at 6,000 rpm. Fuel consumption of 40 to 42 miles per gallon is 9 to 10 percent better than the previous 1.6-liter Carina.

The engine operates with an air-fuel ratio of 22:1 to 24:1, near the practical combustion limit of 25:1. Toyota says electronic fuel injection and a newly designed helical port with swirl-control valve provides superior fuel atomization, thus lowering oxides of nitrogen emissions in a wide range of driving conditions.

Cars with the 1.6-liter lean-burn engine are priced at $10,800 to $12,300.

There are no plans to offer the engine in the United States, though company officials say they don't rule it out for the future.

Last year, Honda Motor Co. and Mitsubishi Motors Corp. unveiled new lean-burn engines on subcompact-class cars. Honda's 1.5-liter Civic VTEC-E engine is offered in the United States, though not in California.

NHTSA sparks recall of 1988-89 Grand Prix

MAX GATES
Staff Reporter

WASHINGTON — General Motors will recall nearly 113,000 1988-89 Pontiac Grand Prix cars, following an investigation by the National Highway Traffic Safety Administration.

The company will install an improved stoplamp switch. The faulty switches prevent brake lamps from lighting or staying lit when brakes are applied.

In vehicles with cruise control, the switch could activate cruise control when the brake pedal is released, NHTSA said.

In other actions reported last week, the agency has opened investigations of:

- Inadvertent door opening in 1988 Mazda 626 and 929 models.
- Eight complaints of fuel line fires in 1990-92 General Motors APV minivans. Nearly 280,000 vehicles would be affected.
- Window shattering in 1991-92 Chrysler Caravan and Voyager minivans.

The federal safety agency upgraded its investigations to engineering analyses of:

- All BMW passenger cars from the 1984-92 model years. The agency has received 71 complaints of heater core failures that can spray occupants with hot coolant. Four injuries have been reported. Nearly 520,000 vehicles are involved.
- Isuzu Troopers and pickups from the 1984-91 model years, which have been the subject of 23 complaints of heater core failures. A total of 450,000 vehicles would be affected.
- GM full-sized Chevrolet and GMC pickup trucks with four-wheel drive and the 4wd Astro Safari. The agency has 16 complaints of brake disc separation from the hub. The problem, which affects 1988-92 model year vehicles, is already the subject of a recall in Canada.
- Sticking throttles in 1.4 million GM vehicles from the 1987-91 model years. The agency has received 121 complaints, including reports of 31 accidents, 13 injuries and one fatality. Included are 2.8-liter engines and GM vehicles with bodies designated A (Oldsmobile Cutlass Ciera and Custom Cruiser Wagon, Buick Century and Century wagon), J (Chevrolet Cavalier, Pontiac Sunbird), L (Chevrolet Corsica, Beretta) and W (Chevrolet Lumina, Oldsmobile Cutlass Supreme, Buick Regal, Pontiac Grand Prix).

BMW drops CFC from all '93 models

JACK KEEBLER

Staff Reporter

BMW of North America Inc. announced last week that its entire 1993 car line will use chloroflurocarbon-free air conditioning systems.

"We have followed an aggressive schedule in replacing CFC-12 with the HFC-134a refrigerant," said Karl Gerlinger, president of BMW's U.S. subsidiary.

"BMW has been a leader in addressing the side effects of CFC applications. In 1991, BMW enforced a recycling policy for all CFC-12 refrigerant fluids. In March 1992, BMW began to install CFC-free air conditioning systems in selected models such as the 735i."

BMW reports that it has supplied each of its dealers with 30 pounds of the new refrigerant to avoid shortages that would inconvenience customers. Refrigerant suppliers have not yet reached full production capacity of HFC-134a.

The importer said that as of September production, it will discontinue use of CFCs, including those used in manufacturing instrument panels and seats.

Scientists believe chemicals like CFC-12 destroy stratospheric ozone, which protects the earth from excessive exposure to ultraviolet light. Researchers have linked such exposure to crop damage and skin cancer. AN

Jensen files for bankruptcy

LONDON — Jensen Car Co., the British high-performance sports car builder that made cars for Clark Gable and other Hollywood stars, has filed for bankruptcy.

Creditors are owed £638,000 ($1.23 million). The Grant Thornton accounting firm has been named receiver and hopes to sell the West Bromwich company as a going concern.

Jensen, which made its first car in 1926, is known for its S4 EFI sports car. During its heyday, Jensen earned a niche as a builder of fashionable handcrafted muscle cars after Gable commissioned a sports tourer based on a Ford V-8 chassis.

Car-truck output up 9% in '92

GWENDOLYN ZONGHETTI

Special Correspondent

Car and truck producers in the United States and Canada have assembled 7,396,665 vehicles so far this year, 9.4 percent ahead of the 6,761,863 built one year ago.

In the United States last week, 116,677 cars were produced, 11.8 percent more than the prior week and 11.4 percent more than the year-ago week.

Year-to-date car production in the United States is 3,613,031, up 5.0 percent over the same point last year.

Canadian automakers produced 20,428 cars last week, 37.5 percent more than the prior week and 3.3 percent more than the same week last year.

So far this year, Canadian car manufacturers have assembled 654,964 autos, down 5.4 percent from the same point in 1991.

Truck production in the United States last week was estimated at 82,531, up 7.4 percent over the prior week and 14.0 percent over the 1991 week.

Year-to-date U.S. truck production is 2,491,317, up 18.0 percent over last year.

Canadian truckmakers produced 17,611 units last week, down 1.1 percent from the prior week but up 8.8 percent over the year-ago week.

Year-to-date truck production in Canada is 637,342, up 23.2 percent over 1991.

The estimated daily build rate of cars and trucks in the United States and Canada last week was 47,449, up 11.0 over the prior week and 11.4 percent over the year-ago week.

Last week's scheduled car and truck production was shared as follows:

General Motors, 39.1 percent; Ford Motor Co., 26.8 percent; Chrysler Corp., 15.7 percent; Honda of America Manufacturing Inc., 4.9 percent; Nissan Motor Manufacturing Corp. U.S.A., 3.2 percent; Toyota Motor Manufacturing (U.S.A.), 2.5 percent; AutoAlliance International Inc., 2.4 percent; Subaru-Isuzu Automotive Inc., 1.3 percent; Diamond-Star Motors Corp., 1.1 percent; New United Motor Manufacturing Inc., 1.0 percent; miscellaneous, 1.0 percent; Navistar International Corp., 0.8 percent; and AM General, 0.2 percent.

Ford's Atlanta car plant will work overtime today for the 1993 model start-up.

Chrysler announced last week that it may be necessary to reduce production of Jeep Cherokees at its Toledo, Ohio, plant due to lack of orders.

This week, Chrysler has scheduled daily overtime at four plants — the Newark, Del., and Belvidere, Ill., car plants and the Warren, Mich.; and Jefferson North (Detroit) truck plants.

The Windsor, Ontario, and Toledo truck plants will work one shift of overtime this Saturday.

Two shifts of Saturday overtime are scheduled for Chrysler's St. Louis No. 2 truck plant. AN

Big 3 file minivan appeal

WASHINGTON — The Big 3 on Friday filed their appeal in the minivan dumping case against Toyota and Mazda.

Chrysler Corp., General Motors and Ford Motor Co. are contesting a June 24 International Trade Commission ruling that domestic minivan makers were not injured by Toyota and Mazda pricing practices.

The Big 3 argued at the Court of International Trade in New York that the trade commission underestimated the competition for minivan sales and the impact of artificially low Japanese prices.

If the Big 3 win, Toyota Previas and Mazda MPVs could be subject to $2,000 or more in additional duties.

— Max Gates

Dodge adopts ram emblem

Chrysler Corp. will adopt a new Dodge emblem in the 1993 model year.

The logo is a new rendering of the division's trademark ram's head, according to Frank Galeana, chairman of the Dodge National Dealer Council. It will be featured in advertising and affixed to the rear or side panel of the 1993 Dodge Intrepid sedan, Galeana said.

Dealers at the company's 1993 new-model announcement show in Las Vegas last week also previewed upcoming advertising.

Chrysler Chairman Lee Iacocca, in his last TV ad for the company, touts the 1993 LH sedans as a home run and looks to the company's future. Minivan TV ads feature owner testimonials. And one TV ad for the LH stresses the

Chrysler hikes parts markup

MARY CONNELLY
Staff Reporter

On Jan. 1, Chrysler Corp. will raise dealer margins by one-third on parts used in warranty work for vehicles built on new platforms.

By agreeing to dealers' demands for a higher parts markup, Chrysler joins Ford Motor Co. and Toyota Motor Sales U.S.A. Inc. and adds pressure on General Motors to follow suit.

Starting Jan. 1, Chrysler will pay a 40 percent markup on warranty replacement parts for the Jeep Grand Cherokee, Dodge Viper and the new LH sedans — the Dodge Intrepid, Eagle Vision, Chrysler Concorde and Chrysler New Yorker. Chrysler will pay the higher rate on future models built on new platforms.

Chrysler will continue to pay a 30 percent markup on warranty replacement parts for other vehicles.

The markup on warranty parts is the amount (expressed in percentage) above dealer cost that the factory pays the dealer for the parts installed in warranty work. Labor is not involved. The norm is 30 percent. Dealers want 40 percent or more. On a $20 part with a 30 percent markup, the factory pays $26. On a $20 part with a 40 percent markup, the factory pays $28.

Chrysler said it expects "a significant decline" in warranty work because of new product quality.

In May, Ford agreed to raise its markup to 35 percent on all 1993 models beginning June 15, and to 40 percent on 1994 models. Warranty parts on pre-1993 models carry a 30 percent markup. Ford chose the June 15 date because some of its 1993 models had gone on sale by that time.

In June, Toyota Motor Sales U.S.A. said it will pay Toyota and Lexus dealers cost plus 45 percent for parts on warranty claims beginning Oct. 1 on 1993 models. The markup remains at 30 percent for warranty parts on older vehicles.

Last February, the industry had expected GM to lead the way in increasing the markup on

BALANCING ACT

GM divisions hunger for new product, but funds are tight

Fourth in a series.

PHIL FRAME
Staff Reporter

Much of General Motors' product future hangs in question as the company balances some desperate needs against a capital budget crimped by two straight years of heavy losses.

Look no further than Chevrolet — the heartbeat of GM and America — for an illustration. Chevrolet/Geo has lost 1.6 percentage points of market share since 1990. In just about every product, it's been outrun by rival Ford. And the division hasn't had a major product restyled since the widely derided 1991 Caprice.

Some help arrives this year in the form of a new Camaro and Geo Prizm and a freshened Caprice. But a clear sign of Chevrolet's needs comes next year, when an overhauled Lumina reaches showrooms. Like the Caprice, the car has never lived up to its expectations. And significantly, GM kept the remake in the 1994 model year rather than delay it, as it did with the other W-body cars: the Pontiac Grand Prix, Oldsmobile Cutlass Supreme and Buick Regal.

FUTURE PRODUCTS

Seven other Chevrolet cars and trucks get redesigns or facelifts next year. And their fate will help determine how far GM's product reach extends for the rest of the decade. More Chevrolet sales mean more profits for GM and more capital for new

One-price will stay, study says

No-haggle system picks up support

KRISTINE STIVEN BREESE
Staff Reporter

LOS ANGELES — Should consumers be able to buy a car the same way they buy dresses, dishes and detergent — without having to haggle over price?

In a study to be released this week, J.D. Power and Associates suggests they should.

The 134-page study, called "One Price Selling: Revolution in the Showroom," says "selling cars and trucks without negotiation may become a dominant selling practice within the U.S. automotive industry in the future."

Citing other research that shows that more than two-thirds of buyers "dislike the negotiation process and distrust automotive salespeople," the Power study suggests that dealer-initiated, one-price strategies may be the best way to win over weary consumers.

"We're convinced that customers aren't happy with the way things are now and they want to buy cars a different way," said Doris Ehlers, a J.D. Power account director who headed the study. "To the degree that one-price, no-haggle is a solution to that, it's here to stay."

J.D. Power and Associates is a market research firm in Agoura Hills, Calif.

Ehlers estimates that hundreds of dealers use the single-price procedure. Although that is a tiny portion of the nation's 23,000 dealers, the practice has attracted lots of attention this year.

Advocates say it clears up the confusion caused by rebates and incentives and the sales process itself. It also has been billed as a way to gain attention and improve customer satisfaction.

Even the National Automobile Dealers Association is taking the concept more seriously.

"We're critical of any move away from salespeople, and some one-price dealers seem to be going that way to cut expenses," said Tom Webb, NADA's chief economist. But Webb said he has nothing

Hurricane gives dealers possible knockout punch

CHARLES M. THOMAS
and JACK KEEBLER
Staff Reporters

In the aftermath of Hurricane Andrew, many automobile dealers in south Florida and coastal Louisiana are wondering when and if they should rebuild their businesses.

"Some dealerships suffered massive damages," said Richard Baker, executive vice president of the 200-member South Florida Auto-Truck Dealers Association. "It will take months for residents to get back on their feet. Dealers don't know when people will have enough money to start buying cars again or whether they should rebuild."

Baker said the city of Homestead, where 20 dealerships were destroyed, sustained the most hurricane damage.

"Buildings are just flattened, and there is 30 miles of it," he said. "The further south in Dade County you go, the worse it gets."

Hurricane Andrew's 140 mph winds with gusts exceeding 164 mph pounded the city for four

Iacocca bids adieu to dealers

Chrysler Corp. Chairman Lee Iacocca last week challenged the company's dealers to vault the automaker into the forefront in satisfying customers.

Iacocca, who is preparing to retire at year's end, asked the dealers to pledge to satisfy customers in the showroom.

In a farewell address to 4,900 dealers at the company's 1993 new-model announcement show in Las Vegas on Thursday, Iacocca said, "I am absolutely convinced service is the thing that will separate the winners from the losers in this business from now on."

Iacocca told the dealers that he wanted to be remembered not for what he has left behind, but for what he has had a hand in starting while at the automaker's helm.

— Mary Connelly

1993 Mirage starts at $7,649

LOS ANGELES — Mitsubishi Motor Sales of America Inc. has priced its 1993 Mirage.

The entry level coupe will start at $7,649, the ES model at $8,939 and the LS at $10,299. The sedan also comes in three trim levels, with the base at $9,439, the ES at $10,479 and the LS at $12,079.

The base model has the same 1.5-liter, four-cylinder engine as the coupe while the ES and LS get a 1.8-liter, four-cylinder engine. The 1992 Mirage came as a three-door hatchback and a sedan.

Diamond-Star workers settle

BLOOMINGTON, Ill. — Hourly workers at the Diamond-Star Motors Corp. plant here were expected to ratify a new three-year contract on Sunday.

The tentative pact was hammered out late last week, but no details were released.

Daewoo moves into Uzbekistan

South Korea's Daewoo Group announced last week that it will set up a $600 million joint-venture plant in the former Soviet Republic of Uzbekistan to build some 180,000 mini-vehicles a year. Daewoo said it will hold 50 percent of the venture, which will be located near the city of Tashkent.
Daewoo is Korea's fourth biggest conglomerate. Its Daewoo Shipbuilding and Heavy Machinery Co. produces mini-vehicles based on Suzuki Motor Co. models.

— Oles Gadacz

Ford exports up 33% for '92

DEARBORN, Mich. — Increased orders for the Ford Explorer and Probe should help keep Ford's export numbers up through the remainder of the year, Ford officials say.

Ford Motor Co. exported 22,892 North American-made vehicles in the first six months of this year, a up 33 percent from the year-ago period.

More than a third of those vehicles went to Middle East countries, which favor the Mercury Grand Marquis and Ford Crown Victoria. But several new European countries will receive the Explorer by year's end.

Ford also signed its largest single export fleet order to send 3,010 Tempos to the People's Republic of China for use as taxicabs.

A much larger deal with an association of taxi drivers in Argentina for 65,000 Tempos never materialized.

GM offers Hughes stock

General Motors will sell 25 million shares of Class H common stock, a class based on the financial performance of GM Hughes Electronics Corp.

The offering includes 21.5 million shares acquired by General Dynamics Corp. when Hughes Aircraft Co., a GM Hughes Electronics subsidiary, purchased General Dynamics' missile business. At that time, it was agreed that GM would sell the stock for General Dynamics.

Newly issued Class H stock from GM makes up the balance of the offering. The underwriters have an option to exercise a 15 percent overallotment of shares.

The main purpose of the public offering is to sell General Dynamics' shares, although GM also wants to increase the liquidity of the Class H stock. Gross proceeds from the sale could reach $612 million, or about $704 million if the underwriters exercise their overallotment option. Proceeds from the offering beyond General Dynamics' shares will be used for general corporate purposes, GM said.

— Phil Frame

GM to sell bearing plants

General Motors is seeking a buyer for its bearing business operated by the Delco Chassis Division at three plants in the United States and Spain.

About 3,000 people are employed at Delco Chassis' bearing plants in Sandusky, Ohio; Bristol, Conn.; and Cadiz, Spain. The Sandusky and Cadiz operations make integral wheel spindle bearings and speed sensing bearings. The Bristol plant makes a variety of bearings for automotive and aerospace applications.

GM previously announced the Bristol plant was for sale, but added the other two plants so a prospective buyer could acquire a full bearing business portfolio, said George Johnston, Delco Chassis general manager.

— Phil Frame

Peterbilt to relocate

NEWARK, Calif. — Peterbilt Motors Co., a division of Paccar Inc., will move its headquarters and engineering activities to Denton, Texas, in 1993.

Division staff will move next spring and the engineering group in the summer.

One of Peterbilt's two Class 8 truck plants is in Denton, which is just north of Dallas.

briefly

Madison Ave. take note

U.S. makers just aren't aggressive enough when it comes to the Japanese consumer. So says Takaharu Kobayakawa, general manager for corporate communications for **Mazda Motor Corp.** Kobayakawa, who was the project manager for the new RX-7, says the **Chrysler** minivans would be a big hit if marketed properly in Japan. "The Chrysler minivans are excellent," he said, "and the new Jeep Grand Cherokee, that's also nice." The engineer-turned-Mazda-spokesman says Chrysler's minivans are the most talked about vehicles in Asia and Europe. Kobayakawa said the Probe, which **Ford** will export to Japan next year as right-hand-drive versions, should be a hit in Japan. Two vehicles that wouldn't make it, in his opinion: The **Cadillac** Seville, which he says is a good car but too large, and the **Saturns** "because they're not stylish enough."

VROOMSKY, VROOMSKY — A park built under Josef Stalin to show the Soviet people how Communism was outpacing the West was the site of the first Moscow International Motor Show last week. Automakers eager to break into the market brought their hottest models to Moscow's first international auto show. Imported cars have become a status symbol for the new rich, and an object of fascination for ordinary Russians as the country tries to switch from Communism to a free market.

JUST LOOKING — Pontiac held a 1993-model press preview at the remodeled Bob Jeanotte Pontiac-GMC Truck store in Plymouth, Mich. That drew about 110 journalists, division personnel and others. Pontiac General Manager John Middlebrook told dealer Jeanotte, "Look around; this proves the factory can build showroom traffic."

GREAT EXPECTATIONS — After five years, **Nissan** has replaced its "Built for the human race" slogan with a new pitch: "It's time to expect more from a car." Or in the case of the campaign's first target, the Quest, "It's time to expect more from a minivan." Ad agency Chiat/Day/Mojo created the spots to help paint Nissan as a full-line automaker, not just a purveyor of speedy cars.

THE NAME GAME — First, Nissan's U.S. sales arm fought to rename the Stanza the Altima for 1993. Then, the company had to battle with a Concord, Calif., computer company, Altima Systems Inc., that has a patent on the name. Nissan won that battle last week. But since Nissan missed a deadline for filing the name with the government, it needs to keep a Stanza badge on it.

Spy photographers: Eat your heart out.

COY CAMARO — Though **Chevrolet** won't take the wraps off its all-new Camaro for the media until fall, it tucked this tease shot into the division's 1993 press kit with a message for undercover shooters Jim Dunne and Hans Lehman. The photo's caption: "1993 Chevrolet Camaro . . . Jim, Hans, et al.: Eat your heart out."

Toyota offers aid for bad Camry door locks

KRISTINE STIVEN BREESE
Staff Reporter

LOS ANGELES — Aiming to preserve its reputation for quality, Toyota Motor Sales U.S.A. Inc. has launched a program for 890,000 Camry owners whose automatic door locks could jam and trap them in their cars.

Under the plan:

- Customers with broken locks can call Toyota's toll-free assistance center for instructions.
- Toyota dealers will temporarily convert working power door lock systems to manual operation.
- Toyota will fix any problems for no charge and will consider reimbursing owners who have already paid for repairs.

Consumer Reports magazine brought the issue to national attention in its September issue. It cited some problem cases, including a Maryland woman who had to have firefighters break into her 1989 Camry, where she was trapped after she found the locks disabled, the door panels hot and the car filled with smoke.

Since May, the National Highway Traffic Safety Administration has been investigating reports that automatic door locks on 1987-91 models can jam and lock people out of their cars — or worse yet, lock them in.

According to Toyota, there have been 60 reported cases.

According to the magazine, the problem is caused by an electric relay that sticks open, allowing an uninterrupted flow of electricity to the door lock solenoids. The solenoids then overheat and seize, disabling the locks. Melted insulation from the solenoid will drip onto the lock mechanism, preventing the locks from being opened manually.

Before Toyota initiated the program, dealers were charging customers for repairs. Toyota spokesman Joe Tetherow says those customers can submit a claim that "will be considered for reimbursement."

If customers are worried even though the car is fine, they can have the car converted from automatic locks to manual for no charge.

Dealers will convert the locks back to automatic once the investigation is complete.

Until then, *Consumer Reports* recommends owners take several precautions, including leaving the doors unlocked while driving except in high-crime areas and carrying tools inside the car to break a window if necessary.

Toyota stresses that it began the program to alleviate customer concerns even though Toyota doesn't yet think the problem warrants a recall. Toyota is participating in the NHTSA review. Toyota will submit a response to a supplemental investigation inquiry today. ■

SERVICE

Land Rover starts parts program

LANHAM, Md. — Land Rover North America Inc. is inaugurating a training and incentive program for dealership parts and service staffs.

The Parts Pro program includes questionnaires, product and parts information, business improvement tips from dealers and special price offers on Range Rover parts and accessories.

Dealership participants will also compete for prizes under the incentive part of the program, which is modeled on the company's Grenadier incentive program for salespersons.

EPA certifies UL-tested recyclers

NORTHBROOK, Ill. — The EPA has approved Underwriters Laboratories Inc. to certify equipment used to recover and recycle R-12 refrigerant from auto air conditioners.

The Clean Air Act requires service facilities to use EPA-approved equipment to service auto air conditioners. The approval is retroactive and covers UL-approved equipment already in use.

As part of its testing procedure, UL simulates a typical day of operation for the equipment by removing and cleaning refrigerant from the equivalent of 18 auto air conditioners and by testing the purity of the recycled refrigerant. To be certified, the equipment must clean the recovered refrigerant of moisture, oil and air to minimum SAE purity levels.

Aftermarket hits high, MEMA says

RESEARCH TRIANGLE PARK, N.C. — The aftermarket business in parts and service reached an all-time high of $110.6 billion in 1991, according to the Motor and Equipment Manufacturers Association, representing a 3 percent increase from 1990.

Aftermarket product purchases rose 1.7 percent in 1991 to $82.6 billion, while service business rose 7.2 percent to $28 billion.

Service business continues to grow as a share of the aftermarket. In 1991, purchased service accounted for 25.3 percent of all expenditures, up from 24.4 percent in 1990.

Hyundai mails discounts on service to customers

FOUNTAIN VALLEY, Calif. — Hyundai Motor America is offering special discounts on maintenance to more than 500,000 of its customers with the Preferred Owner's Program.

The program, which is coordinated through Hyundai dealerships, sends coupons good for discounts on service work to Hyundai owners three times a year.

Under the program, Hyundai dealers select from a menu of discount offers.

The mailings are handled by the corporate office in Fountain Valley, Calif.

Dealers receive a list of customers who were mailed the discount offer and timing of the mailing so dealership personnel can follow the offer with personal contact.

Last spring, the first mailing included discounts on services such as cooling system maintenance, lube, oil and filters, tune-ups, front brake specials, automatic transmission service and 30,000-mile maintenance.

The second round of coupons was sent in July offering a free 21-point inspection and discounts on an air-conditioning inspection, 7,500-mile maintenance and vehicle security systems.

The third round will be sent out in November, just in time for the holidays. Hyundai dealers are now selecting from a list of more than 20 items the coupon discounts to be offered in the mailing.

"This is an effective way to keep our consumers happy and show our commitment to quality service," said Frank Ferrara, director of parts for Hyundai Motor America.

"Vehicle maintenance is an important part of the confidence equation for our customers," Ferrara said.

The program is the latest in a series of moves by the Korean automaker to repair its quality image that was tarnished in the late 1980s.

Last year with the introduction of its Elantra sedan, Hyundai introduced the ValueCare Ownership Program, which provided scheduled maintenance for Elantras at no charge for two years or 24,000 miles.

The automaker also increased its warranty coverage for powertrains to 5 years/60,000 miles from 3 years/36,000 miles.

Hyundai Motor America has 500 dealers nationwide. ■

Service business rises in July

Business at new-car dealerships this summer continues to be better than last year, according to the *Automotive News* Service Index. Service business in July was 107 percent of the volume recorded in July 1991.

July's showing was the second consecutive monthly increase in the index. The June result was 108.7 percent of the previous year's figure.

For the year to date, service business totaled 104.1 percent of the amount recorded in the first seven months of 1991.

For July, large gains were noted in shop parts sales, up 9.4 percent, and sales of all parts and accessories, up 8.3 percent. Gross profit on all labor and parts and accessory sales rose 6.2 percent; total labor sales were up 4.1 percent.

Large year-to-date increases also were noted for shop parts sales and sales of all parts and accessories. The only decline was in repair orders written, down a scant 0.1 percent for the period.

Despite the overall increase, a number of dealers said their repair business was down during July. A common reason cited was technician vacations. Others blamed a continued soft economy and the fact that late-model cars need less maintenance.

Of those reporting an increase, reasons cited included the hiring of more technicians, which increased the business volume, and more parts sales per repair order due to sales training.

Figures used in the Service Index are complied from a cross-section of new-car dealerships. ■

SERVICE INDEX
107.0★

	July, '92 vs. July, '91	Jan.-July, '92 vs. Jan.-July, '91
Gross Profit on All Labor and P&A Sales	+ 6.20%	+ 2.60%
Repair Orders Written	– 0.01%	– 0.01%
Total Labor Sales (Customer & Warranty)	+ 4.10%	+ 1.20%
Shop Parts Sales (Customer & Warranty)	+ 9.40%	+ 6.70%
Sales of All P&A	+ 8.30%	+ 6.50%

★ Survey by Automotive News shows that dealers' service and parts business in July 1992 was 107.0 percent of business in July 1991. Service business in 1992 was 104.1 percent of business in the corresponding period in 1991.

Agency Auto Sales

Extra day helps sales move up

Scenario unaltered: Trucks do the job

JIM HENRY
Staff Reporter

Truck sales rolled on in mid-August, despite a continuing drop in consumer confidence.

Sales of light trucks, including pickups, minivans and sport-utilities, jumped 23.4 percent above a poor year-ago period. The surge offset mediocre car sales and pushed the total market 5.8 percent above 1991.

Car sales sagged 3.3 percent despite improvements for Ford Motor Co. and Toyota Motor Sales U.S.A.

Percentage changes are based on the daily selling rate. There were nine selling days in the mid-August period this year and eight last year. Total sales were 358,251 this year and 300,969 in 1991.

August sales show "it's clear the bust is over," said Tom Webb, chief economist for the National Automobile Dealers Association.

But the Conference Board in New York reported that its consumer confidence index fell again in August, following a sharp drop in July. "There now appears to be scant likelihood of any significant quickening in the pace of economic growth in the immediate months ahead," said Fabian Linden, executive director of research.

Light-truck buyers seem to have a more bullish view.

Trucks accounted for 40 percent of the light vehicles sold in mid-August, compared to 34 percent a year ago. Domestic trucks rose 32.3 percent while imported trucks dropped 29.7 percent.

Through July, trucks had 35.3 percent of the total 1992 market vs. 33.1 percent in 1991.

General Motors sold 48,506 domestic light trucks in mid-August, 19.3 percent above the year-ago period's daily rate. Sales of the C/K pickup shot up 49.5 percent.

GM cars fell 10.4 percent in mid-August. Besides Saturn, Cadillac was the only GM division that posted higher car sales than a year ago on a daily-rate basis. Cadillac was up 19.3 percent. Sales skyrocketed for the Eldorado and Seville, which were lame ducks awaiting radically restyled models a year ago. Seville sales were 10 times the year-ago total.

Saturn's daily rate was 35.3 percent above the year-ago period, yet Saturn's numbers have plunged in August because dealers are short of 1992 models. Saturn averaged more than 7,000 sales per 10-day period in June and July, but fewer than half that so far in August.

Ford Motor Co. was the only one of the Big 3 with a higher sales rate for both cars and trucks. Ford's truck sales ballooned 36.7 percent; car sales were up 12.6 percent. The company's combined car-truck sales rose 22.8 percent.

Chrysler Corp.'s sales rate improved 21.5 percent on a 43.3 percent upswing in light trucks. *Automotive News* estimates 10-day sales for Chrysler and for most imports.

Toyota's corporate sales rate rose 19.1 percent, even though Japanese marques as a group dipped 3.4 percent. Lexus improved 70.0 percent; Toyota cars rose 16.9 percent; its trucks were up 12.9 percent.

Sales for American Honda Motor Co. Inc. slipped 12.5 percent on a daily rate basis. Ten-day sales for Nissan Motor Corp. in U.S.A. fell 24.4 percent. AN

Cabriolet	$1,500
Corrado G60	$1,200
Passat	$750
Jetta	$500

ONE PRICE

No-haggle system picks up support

continued from PAGE 1

against the one-price trend as it addresses "finding ways to make the sales experience more pleasant for the customer."

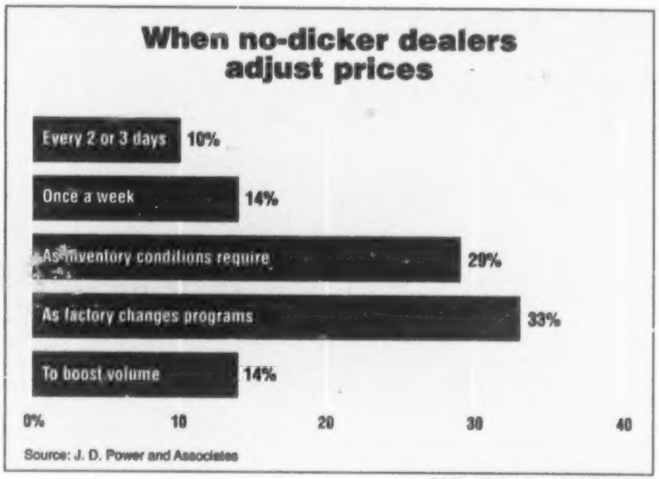
Ehlers studied an original group of 24 one-price dealers in April and May to reach her findings. Since then, she has talked to 39 other dealers. And she says she has "a huge stack of messages from other one-price dealers who want to talk about what they're doing."

The original group of 24 included many domestic-make dealers and dealers whom Ehlers calls "desperate to try anything to increase sales." But she said that is changing rapidly.

Today, she says, import and domestic dealers — successful and marginal — are trying the idea in equal numbers.

Some results from the study:

- Ninety-two percent of the dealers studied said sales have increased since they went to one-price selling. Greg Stewart, chief executive officer of Westwood Buick in Westwood, N.J., said his sales have doubled to 60 units a month since he switched.
- Half the dealers said their average grosses have increased since the onset of one-price. Twenty-five percent said it hasn't had any effect on grosses, and 25 percent said grosses have declined.



When no-dicker dealers adjust prices

Source: J. D. Power and Associates

DAVID L. BURHANS / AUTOMOTIVE NEWS

Ehlers said such disparity could reflect the many different approaches dealers are taking to one-price. She said she believes the differences in performance will be reduced as a standard emerges.

For example, in setting prices, 33 percent of the dealers said they adjust their one-price stickers according to factory incentive programs; 29 percent do so "when inventory conditions require;" and 10 percent said they change the prices "every two or three days."

Dealers also report widely varied practices in handling trade-ins and extending no-haggle policies to their used-car operations.

Fifty-four percent of the dealers studied said they still negotiate trade-in values. Sixty-five percent said they practice one-price only on new cars, while 35 percent said new and used cars are being handled identically.

The Power study addresses local-market, dealer-initiated one-price selling. Another study is due late this year on national pricing strategies set by manufacturers such as General Motors' Saturn Corp. and Ford Motor Co.

> ❛ Can you really use national solutions for local problems? I don't think so. ❜
>
> **DORIS EHLERS**
> J.D. POWER AND ASSOCIATES

Ehlers said consumer dissatisfaction with the current system is so great that dealers and manufacturers will have to respond. But she said that establishing a true one-price strategy should be left to individual dealers who best know their costs, grosses and the price that the market will bear.

"Can you really use national solutions for local problems? I don't think so," she said.

Even at Ford Division, where the $10,499 one-price program for all Escort LX models has met with great success, General Manager Ross Roberts believes that the final transaction price is up to the dealer.

"Competition really determines what your price is," Roberts said. "We can suggest a price of $10,499," but if the market won't bring it, dealers are going to cut into their gross to make the deal. AN

How Power examined one-pricers

KRISTINE STIVEN BREESE
Staff Reporter

LOS ANGELES — For its study, J.D. Power and Associates defines one-price selling as a system that "establishes a unique, market-adjusted retail price for each vehicle, publishes that price and then sells the vehicle for that price."

Power began the study in April by contacting 24 one-price dealers around the country and conducting 60-minute interviews with the dealer principal and general manager. That was followed by two focus group sessions attended by representatives from all 24 dealerships.

Study director Doris Ehlers did on-site, videotaped interviews with management, salespersons and customers at seven of the 24 dealerships.

Since beginning work on the study, Ehlers says she has talked to 39 more one-price dealers and has conducted the same 60-minute interview with each one of them. While those 39 were not part of the initial study, Ehlers says that in almost every case, the findings from the second group echo what was found from the first.

She says that the study is "more qualitative than what you usually see out of Power," but that it is meant "to start a dialogue among dealers and their management, among manufacturers," about one-price strategies.

A more quantitative study will be released in December. It will measure how widespread the practice is, break down the practice by nameplate and discuss in detail how it is affecting dealer profits. AN

Ministers ready to buy Ill. dealership

KATHY JACKSON

Staff Reporter

A group of Chicago-area ministers may close a deal this week to acquire a Chrysler dealership.

Chrysler spokesman Tom Houston would not confirm that the deal is imminent, but says Chrysler is "ready to go" as soon as the group meets the company's requirements.

Houston says the group needs $800,000 — $400,000 in unencumbered funds — and a dealer that meets Chrysler's approval. Sources say the ministers have $1 million and a candidate.

Harvey Chrysler-Plymouth closed in July when owner Bobbie Faulkner, a black man, declared bankruptcy.

The dealership is in Harvey, Ill., a predominantly black community, and the ministers initially staged a sit-in to prevent Chrysler from closing the business.

That's when Chrysler agreed to negotiate with the ministers about them acquiring the dealership.

Sources say the ministers have selected Detroiter Cliff Curry to run the store.

Houston confirmed that the ministers are talking with Curry. AN

GM trucks draw Ditlow blast

WASHINGTON — The Center for Auto Safety has asked the National Highway Traffic Safety Administration to investigate certain GMC and Chevrolet pickup trucks equipped with fuel tanks that sit outside the protective frame rails.

The center says such tanks, used in 1973 to 1987 models, can break open in side collisions.

Clarence Ditlow, executive director of the center, said he believes there are as many as 2 million such trucks on the road.

A NHTSA spokesman said agency officials are reviewing the petition. NHTSA has 120 days to decide whether to begin a recall investigation.

Ditlow said NHTSA's earlier safety testing of the pickups failed to detect the potential gas tank problem because the agency conducted only frontal-crash tests.

Ditlow claimed GM has settled out of court lawsuits that resulted from accidents in which gas tanks ruptured in collisions and caught fire. He said the out-of-court settlements kept the lawsuits from getting wider notoriety.

Van Nuys ends run of GM 'F'

GWENDOLYN ZONGHETTI

Special Correspondent

After 45 years of operation, General Motors closed its assembly plant in Van Nuys, Calif., last Thursday.

The last vehicle assembled at the plant was a red Chevrolet Camaro. The 1993 GM F-cars, the Camaro and the Pontiac Firebird will be produced in St. Therese, Quebec.

In the United States last week, car production was scheduled at 116,339, up 2.0 percent from the prior week and 16.1 percent over the year-ago week.

Year-to-date U.S. car production is 3,726,802, up 5.2 percent from the year-ago week.

Truck production in the United States was 81,867 last week, down 2.1 percent from the prior week but up 12.6 percent from the 1991 week. So far this year, 2,574,282 U.S. trucks have been built, up 17.7 percent from 1991.

In Canada last week, car production was scheduled at 17,535, down 8.9 percent from the prior week and 19.6 percent below the year-ago week.

Year-to-date auto production in Canada is 671,310, down 5.5 percent from the 1991 week.

Last week, truck production in Canada was estimated at 18,268, down 4.0 percent from the prior week but jumping 31.9 percent ahead of the same point in 1991.

So far this year, 657,023 trucks have been produced in Canada, up 24.2 percent from 1991.

Last week scheduled car and truck production was shared as follows:

GM, 37.9 percent; Ford Motor Co., 27.3 percent; Chrysler Corp., 16.0 percent; Honda of America Manufacturing Inc., 4.8 percent; Nissan Motor Manufacturing Corp. U.S.A., 3.2 percent; AutoAlliance International Inc., 2.9 percent; Toyota Motor Manufacturing (U.S.A.), 2.5 percent; Subaru-Isuzu Automotive Inc., 1.3 percent; Diamond-Star Motors Corp., 1.1 percent; New United Motor Manufacturing Inc., 1.0 percent; miscellaneous, 1.0 percent; Navistar International Corp., 0.8 percent; AM General, 0.2 percent.

GM scheduled daily overtime last week at the Janesville, Wis., and Moraine, Ohio, truck plants.

A strike at GM's Lordstown, Ohio, metal fabricating plant caused a loss of Chevrolet Cavalier and Pontiac Sunbird production last Friday. Second-shift assemblers were told not to report.

Saturn Corp. was also affected. It did not build cars last Friday because of parts shortages caused by the Lordstown strike. Approximately 1,100 units were lost.

Ford slated daily overtime at its Atlanta and Chicago car plants and the Kansas City, Mo., and St. Louis truck plants.

Chrysler scheduled overtime last Saturday at its St. Louis, and Jefferson North (Detroit) plants.

Canadian plants will be closed Friday, Sept. 4 in observance of the Labor Day holiday. AN

Service contract tax deal set

WASHINGTON — More than 1,000 dealers who are being audited by the Internal Revenue Service for selling extended service contracts and not accounting for them according to revenue service guidelines are being offered a settlement by the government.

Under an IRS ruling issued Thursday, dealers can compress future deductions on the sale of the extended service contracts into the year the contract was sold, but discount them to reflect the time-value of money.

Though the new ruling will create an additional tax, it should not be as large as the levy under the original IRS ruling, according to Steven

Saturn curbs sales inside GM

LINDSAY CHAPPELL
Staff Reporter

So tight is the demand for General Motors' Saturn line that Saturn is trimming discount sales to its employees and the rest of GM's 375,000 workers and their family members.

The unusual move widens the gulf between Saturn Corp. and the rest of GM because Saturn treats employees differently.

A Saturn executive estimated that about 10 percent of Saturn's sales nationally — or about 1,200 cars a month — are going to GM employees. At the four Detroit-area dealerships employee sales can run as high as 50 percent.

Under the new rules, only Saturn's 5,500 employees in Tennessee and Michigan, and their immediate families, will receive GM's standard 5 percent employee discount when ordering new Saturns. Other GM employees will continue to receive the discount only on cars purchased out of dealer inventories. But Saturn inventories are almost gone, and it will likely be

Lordstown is omen for '93

Parts plant scuffle is tip of labor iceberg for GM

LIZ PINTO
Staff Reporter

It could be a long, cold winter and a long, hot summer for General Motors and the UAW.

It's a full year before their contract expires — at midnight on Sept. 14, 1993 — but the two sides already are feeling each other out and posturing for the coming fight.

Most analysts believe the Lordstown tool-and-die strike over 240 jobs is a clear harbinger of bloody 1993 contract talks. The nine-day strike shut seven assembly plants and cost 24,415 cars and trucks through last week.

At the heart of the matter is the developing reorganization in the United States. GM President Jack Smith and his team are building the new North American Operations, paring the excesses of the past four decades, in an effort to become lean and competitive in every segment of the business.

That means labor too.

So GM, which last December said it would close six assembly plants and eliminate 80,000 North American jobs by 1996, will come to the bargaining table next year seeking ways to reduce labor costs and improve competitiveness.

The UAW will come to the bargaining table with its own list of demands, seeking to keep jobs and benefits.

PACESETTING LABOR PACTS

Saturn's secret is simple ➤ 42
Diamond-Star talks end on upswing ➤ 42

Items sharing first-priority status for both sides at the 1993 talks are likely to include:

- Health-care cost sharing.
- Guaranteed income fund replenishment.

Clearly, the financial community wants GM to take a hard line. After the strike began, Wall Street signalled its approval as the price of GM's stock nosed up.

"This strike (at Lordstown) reveals the

Pontiac's teaser

Pontiac has lifted the veil on the redesigned 1993 Firebird Trans Am Coupe, which goes on sale early next year. The new model features plastic body panels, dual airbags, antilock brakes, a six-speed manual transmission and a 280-horsepower 5.7-liter LT-1 V-8 powerplant.

Hurricane aftermath: dealership is shelter

CHARLES M. THOMAS
Staff Reporter

A south Florida Mazda dealership's parts and service center has served as the temporary shelter for eight families of dealership employees after Hurricane Andrew leveled their homes.

Even though the windows and garage doors of Zinn Mazda's service center were blown out, the families, who had no place else to go in the hours after the storm, sought shelter there. The hurricane destroyed the dealership's showroom.

Other families moved on, but the family of the dealership's chief technician remained at the service center until Friday when dealer Robert Zinn found a trailer for them to live in.

He said the technician arrived at the service center armed and ready to protect the only possess-

A dirty job

Federal and state environmental laws are forcing dealers to clean up their service departments, and the changes are cutting into profits. See *Automotive News Insight*, which follows Page 24.

Fleet sales swing away from Big 3

WILLIAM R. DIEM
Assistant Managing Editor

The Big 3 backed away from rental sales in the first half of 1992 as they promised, but Nissan Motor Corp. in U.S.A. picked up part of the slack.

In 1992, Nissan quietly doubled its fleet car sales in the rental and leasing category, according to figures compiled by R.L. Polk & Co. for *Automotive News*. Nissan's first-half sales were 24,204, up from 11,985 last year.

Toyota Motor Sales U.S.A. Inc. also increased its reliance on fleet sales in the first half. While retail registrations were flat, the rental and lease category for Toyota cars rose to 49,058 units, up from 42,372 in the first half last year.

And Hyundai, which lost 9,311 retail car registrations in the first half compared with a year ago, picked up 4,047 units in the overall fleet market.

A Nissan spokesman said the increase was mainly due to new commercial fleet business and "an expanded presence" in daily and long-term rental markets.

The compilation for *Automotive News* shows that the Big 3 continue to dominate U.S. fleet sales, and they are by far the most dependent on them. Fleet sales to rental and leasing companies, government agencies and businesses account for more than a third of the Big 3

Mark VIII tab about $37,000

ORLANDO, Fla. — When the redesigned Mark VIII debuts in December, it will be priced close to its archrival, the Cadillac Eldorado with the optional Northstar V-8 engine, Lincoln-Mercury General Manager Lee Miskowski told L-M dealers at their convention last week.

"It's going to be $37,000 to $38,000 — it's not priced yet, but that's the general price range," Miskowski said.

The 1993 Eldorado with the sport coupe package, which includes the Northstar V-8 engine, is $36,990.

— Richard Truett

GM executive jumps to VW

AUBURN HILLS, Mich. — Thomas Shaver ended his 29-year career with General Motors last week when he was appointed vice president of Volkswagen United States Inc.

Shaver

Shaver was most recently director of consumer marketing for GM's Saturn Corp. The appointment was effective Sept. 1.

In his new position, Shaver, 52, is responsible for sales, marketing and executive management of VW U.S. He will report to William Young, Volkswagen of America president.

VWoA is the parent company of VW U.S. and Audi of America.

A Saturn spokesman said the company has not named a successor.

— Arlena Sawyers

Ford balances downtime

DEARBORN, Mich. — Ford Motor Co. has balanced scheduled downtime at Escort plants in Michigan and Mexico in a compromise with the UAW.

The Wayne, Mich., plant, which makes slower-selling two-door models, had been scheduled to be down for nine weeks through the end of the year, while its sister plant in Hermosillo, Mexico, was scheduled for four weeks of downtime. Hermosillo makes sedans and stations wagons, which are more popular under Ford's national one-price Escort program.

Union official Jeff Washington says Wayne now will be down eight weeks and Hermosillo seven weeks. He says his members are satisfied with the deal on downtime, but they still want to be making a more popular vehicle at the plant.

Mazda recalls 16,688 Miatas

IRVINE, Calif. — Mazda is recalling 16,688 1990 MX-5 Miatas for the inspection and possible replacement of the catalytic converter.

Mazda said that on certain 1990 Mazda MX-5 Miatas manufactured between March and August 1989, the heat expansive mat holding the catalyst may become dislodged, allowing it to vibrate. If the vehicle is operated under this condition, the catalyst may eventually wear out, which could impair the ability of the converter to reduce vehicle emissions.

Honda touts Chrysler sales

TOKYO — Honda Motor Co., which two years ago offered to help Chrysler Corp. sell its products in Japan, now accounts for more than half of the Chrysler's sales here, a Honda official said last week.

Mitsuru Sato, Honda's general manager for export sales, said Honda dealers accounted for 55 percent of Chrysler's total sales of 1,020 units in the first eight months of 1992, and 70 percent of the Jeep Cherokee total of 753.

Honda sells Chrysler units through 300 dealers across the country, compared to Chrysler Japan's more modest network of 60 dealers.

4 pass, 2 fail 35-mph crash

WASHINGTON — Federal safety officials have crashed six more vehicles to complete their 1992 New Car Assessment Program.

The Ford Crown Victoria, Acura Legend, Mazda MX-3 and Honda Prelude scored well, indicating that serious head or chest injury was unlikely in a 35-mph frontal collision.

Test dummy scores in the passenger position in two other vehicles indicated a chance of injury. The passenger score for the Saturn SL2 four-door sedan was 1,018; for the Ford Econoline van, it was 1,004. A score above 1,000 indicates that serious head injury is possible, according to the National Highway Traffic Safety Administration.

Poles to resume Fiat-car output

TURIN, Italy — Fiat Auto S.p.A. said production of its Cinquecento minicar will resume this week following a six-week stoppage at the FSM plant in Tychy, Poland. Fiat is in the process of acquiring a majority stake in FSM, Poland's state-owned vehicle company that is the sole source of the Cinquecento.

Polish metal workers walked off their jobs in mid-July to back their demands for big pay raises to keep up with rampant inflation throughout the former Soviet bloc. The walkout, which affected several key industries, also shut FSM's main plant in Bieskio Biala.

Fiat said the shutdown cost the company 13,000 Cinquecento sales. About 35,000 of the minis have been sold since it debuted in March, the company said.

briefly

LH supplier mistimes tour

In August, A.O. Smith Automotive Products Co. scheduled a press event for Wednesday to dedicate its new Barrie, Ontario, plant and tout its modular assembly program for **Chrysler Corp.**'s new LH sedans. But the timing could be better. Just last week Chrysler confirmed it was recalling the first 4,000 LH sedans built because of a faulty washer in the front suspension module. (See story on next page.) Chrysler wouldn't name the supplier. But Milwaukee-based A.O. Smith confirmed that it supplies the front and rear suspension modules in the new sedans and shipped the units with the faulty washer. Can't wait to see how the spin doctors handle this one.

STRONG ARMING — Former NBA star Sidney Moncrief faces a court date for breaking a man's arm at Moncrief's dealership just outside Phoenix. A Glendale, Ariz., police spokeswoman says Moncrief was arrested Aug. 31 after the 35-year-old victim told police that Moncrief struck him twice on the left arm with a golf club while the two men were conducting business at Moncrief's **Mitsubishi** dealership in Glendale. The spokeswoman didn't know if the victim was an angry customer.

FAMILY VALUES? — Auto manufacturers and suppliers didn't fare well in a recent study by the New York-based Families and Work Institute, which measured the "family friendliness" of 188 Fortune 500 companies. Results show that the auto industry is far behind others in providing flexibility for employees dealing with young or sick children and aged parents. Pharmaceutical and financial service firms were at the top of the list.

SATURN'S BRIDESMAIDS — **Saturn Corp.** says 70 percent of its buyers list an import make as their second choice. So which importers are losing out? Between the top two, **Toyota** is holding up better than **Honda**, maintains Toyota Vice President George Borst. Toyota's research shows that 25 percent of Saturn buyers would have bought a Honda next, Borst says. Only 8 percent list Toyota.

LIKE DALLAS, LIKE SEOUL — The man who started Korea's **Hyundai** Group — Chung Ju Yung — is now a presidential contender in South Korea, and he sounds a lot like H. Ross Perot, who almost made a run for the U.S. presidency. Chung, 77, says he would apply business savvy to the problems of running an emerging democracy. His United Peoples' Party slogan is "Clean and Honest Government," and like Perot, he has had to defend himself against suggestions that his authoritarian business style won't work in government.

France's electric Zoom

Renault's answer to city congestion is the Zoom prototype electric car. When parking, the two-seater's rear wheels come forward and its body rises, reducing overall length from 103 to 81 inches. The Zoom's plastic body is recyclable.

Sales sputter in August

LINDSAY CHAPPELL
Staff Reporter

August sales slowed to last year's disappointing rate, and there appears to be little chance that the 1992 market can reach 13 million units.

The month's car and truck sales actually dropped slightly from last year, for a monthly total of 1,047,223 units — 652 fewer than in August 1991.

With two-thirds of the calendar year complete, the industry is running just 3.4 percent ahead of last year. The modest eight-month gain points the way to a 12.7-million-

Japanese sales sink 16.3% in August

MARY ANN MASKERY
Staff Reporter

TOKYO — Weighed down by the first monthly drop in big-car demand in three years, sales of new cars and trucks in August plunged 16.3 percent from a year earlier — the steepest year-to-year drop since November 1980.

The slide, to 288,682 units, marked the 13th year-on-year decline in 15 months and brought year-to-date sales to 3.6 million units, off 5.9 percent from a year earlier.

The rout was spread evenly among Japan's Big Five, all of whom are grappling with sliding sales and profits.

Toyota Motor Corp. fell 14.2 percent; Nissan Motor Co. was off 25.2 percent; Mazda Motor Corp., 16.7 percent; Honda Motor Co., 17.4 percent; and Mitsubishi Motors Corp., 2.9 percent.

Company spokesmen said the decline was not as bad it looked because there were 2½ fewer selling days in August compared to a year earlier. Adjusting for the difference would trim the decline to about 7 percent, said Koji Endo, auto industry analyst for S.G. Warburg Securities in Tokyo.

"But even that is worse than expected," he said.

Stephen Usher, who follows the industry for Kleinwort Benson International in Tokyo, said the August decline cannot be qualified.

"These are very, very bad numbers," he said. "This is not the spike that signals it has hit bottom. There are more bad numbers to come."

The sharp decline was led by an unexpectedly sharp falloff in the large-car segment, over 2.0 liters, which had sustained double-digit growth rates since April 1989. Sales in the segment plunged 18.3 percent to 36,209 units.

Analysts linked the slide to increasing economic skittishness in Japan, and said it was not a one-month phenomenon.

"The worrying part about the drop in large car sales is that most companies were making good money on that market," said Keith Donaldson of Salomon Brothers in Tokyo. "And the big boom is over."

The drop in large-car sales also affected imports. The segment fell 7.6 percent to 14,057 units, although it was propped by a 54.7 percent surge for Volkswagen, which began selling its long-awaited Golf III here.

General Motors reported a 19.4 percent drop in August to 573 units.

Ford sales were up 12.8 percent to 246, sustained in part by demand for the Taurus wagon and the clearance of Probe inventory for the new model. Chrysler was up 24.8 percent to 146. ■

U.K. sales come up short

ED WENDT
Staff Correspondent

LONDON — New-car sales in the United Kingdom appear to be headed for their worst year since 1982 following tepid registrations in August, the month when the industry traditionally posts nearly 25 percent of its full-year sales.

The Society of Motor Manufacturers and Traders, the industry trade group, reported Friday that August sales rose a sluggish 1.7 percent from a down month a year earlier, to 373,804 units.

Industry executives and analysts had said that August sales needed to top 400,000 units to keep full-year sales from falling below the 1991 total of 1.59 million units.

But with registrations through August off 2.5 percent, several suggested the industry now appears to be headed for total 1992 sales of about 1.55 million units — a level last seen 10 years ago.

Battered by recession, high interest rates and restrictive tax policy, car sales slid in 1990 and 1991 from a record 2.3 million units in 1989.

Sales have not fallen for three consecutive years since before World War II.

"August is definitely below our expectations," said Bill Ebbert, chairman of General Motors/Vauxhall, Britain's second biggest carmaker after Ford Motor Co. "It is pointing to the fact that whatever recovery we are going to see is sometime ahead."

Ebbert called on the government to take immediate steps to revive the economy.

"Unemployment rates are still high, interest rates are still high, and the housing market is down," Ebbert said. "Until things start coming back, it is questionable when consumer confidence will return."

Among Britain's Big Three, Ford sales through August were off 5.7 percent from a year earlier to 270,283; Vauxhall was up 3.6 percent to 197,860; and Rover Group slid 16.6 percent to 145,057. ■

Japanese hikes top Big 3

Jaguar cuts prices by dropping V-12

JACK KEEBLER
Staff Reporter

A "kindler, gentler" import price season took shape last week as Toyota, Lexus, Infiniti, Saab and Jaguar pinned stickers on their 1993 models.

Toyota, Lexus and Infiniti raised prices more than the preliminary increase of 2.17 percent for 1993 Big 3 cars, indicating they will be less competitive. Jaguar posted an overall price cut of 3 percent, but it got there by deleting its 12-cylinder engine and escaping from the gas-guzzler tax.

The Big 3 price edge under the Japanese is even wider than it first appears, as the Japanese raised prices an average of 2.8 percent last spring, and the Big 3 did not.

Mazda Motor of America Inc. has already announced an increase of 2.9 percent, or $422, for 1993, and Mercedes-Benz of North America has held the line on its 190 series and announced slight increases on some of its flagship S-class cars.

Toyota's increase of 2.6 percent, or $375, on comparably equipped models comes nearly a year after George Borst, vice president of strategic and product planning, came to Detroit promising a "kinder, gentler" Toyota while predicting market share gains for the Big 3. His sales predictions have largely come true, although the market has not grown as much as he expected.

The Big 3 have gained. Japanese makes held 25.9 percent of the car and light-truck market at the start of the 1992 model year. They had 24.3 percent through August. The Big 3's share has risen from 70.2 to 72.1 percent.

NO MIDYEAR HIKE SEEN

Despite "Buy American" pitches and its own midyear price increase, Toyota Motor Sales has increased sales this year. But combined market share for Toyota and Lexus has slipped a tenth of a percentage point.

Borst predicts more growth for the Big 3, the U.S. market and Toyota.

"Don't believe for one minute that because of the predicted gains in sales, share and profitability by the Big 3 that there is a retreat on at Toyota," said Borst, who introduced the new Corolla in Detroit last week.

He said Toyota does not plan any additional price increases for 1993 models.

"I'd like to see this as the only increase for 1993," he said. "We'll adjust as conditions adjust. But Toyota is not planning any midyear increase at this time.

"You know, our pricing was adjusted four times over the last two years. And we unfortunately led the industry in pricing. But by doing it then and taking that early, we got the yen-dollar situation much better adjusted than, I think, a lot of others."

On comparably equipped models, Toyota's price hikes range from 1.9 percent, or $210, on the Paseo to 3.9 percent, or $446, on the new Corolla. Prices of the 4Runner sport-utility were not increased.

Without adjusting for year-to-year equipment changes, Toyota's 1993 cars and trucks are up an average of 3.68 percent, or $568. That

Toyota unveils new Corolla > 26

Borst tries again to predict future market

JACK KEEBLER
Staff Reporter

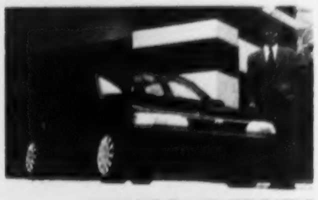
DETROIT — A year ago, Toyota Vice President George Borst predicted that gains in Big 3 market share would lead a 1.5 million jump in car and light-truck sales in 1992.

Through August, the Big 3's gain of 1.9 points of market share year was more than he predicted. The sales increase has been less. Sales were up 283,340 units through August, indicating a full-year gain of less than half a million.

Here are some of his latest predictions for the U.S. car and light-truck market.

1992 calendar year: Total market up 5.5 percent to 13 million. Cars will rise 3 percent to 8.4 million; trucks will gain 11 percent to 4.6 million.

Each of the Big 3 will gain sales, for a combined 2.2 percent increase in market share.



JOE WILSSENS/AUTOMOTIVE NEWS

Toyota vice president George Borst predicts Japanese makers will lose 3.3 points of market share this year.

Borst said Toyota expects Japanese makers to lose 3.3 points of market share in light trucks and 1 point in cars.

1993 calendar year: Total sales up 6.0 percent to 13.8 million with 9 million cars and 4.8 million trucks.

Domestic makes will improve their car market share by half a percentage point, to 65.8 percent, and lose half a point in light trucks. The Japanese and domestics will increase sales.

The 1992 forecast is down from Borst's earlier prediction of 14.2 million.

"Hopefully by 1994, the industry may once again approach 14.5 to 15 million units," he said.

Toyota, he said, will continue to gain market share. During the last 18 months, Toyota has invested in five product programs, he said, and there will be six more in the next 12 months.

"You can certainly add Toyota's name to the growing list of companies frustrated by the elusive and very slow economic recovery," said Borst. "Having just come from the '80s environment with all the emphasis on instant gratification, it's difficult to adjust to the sluggish pace of this recovery." ■

Positive Outlook

Service managers foresee more business

By: Al Fleming

Dealership service bosses think the auto business is going to get better in 1993.

Over 91 percent of service managers responding to *Automotive News'* annual survey said they expect their dealerships' sales and profits will climb next year. Over 88 percent said their service department sales and profits will rise in 1993.

Survey participants work for dealer franchises representing 45 car and light-truck makes.

The survey confirms last month's report by the National Automobile Dealers Association that "a slow rebuilding is under way, dealership efficiency has reached new heights (and) service work has taken on added importance."

Increased service and parts profits helped dealerships maintain a net profit before taxes of 1 percent for 1991, the same as in 1989 and 1990.

In fact, service and parts profits provided virtually all dealership profits in 1991, as a substantial loss in new-vehicle revenues erased modest profits earned with used vehicles.

An even healthier service business seems to lie ahead. A solid 67.3 percent of service managers responding to the *Automotive News* survey made in July said they expect service department sales and profits will be higher in 1992 than in 1991. An even greater 88.1 percent said they look for further jumps in 1993. ☐

Al Fleming is industry editor for Automotive News.

Automotive News Survey of Dealer Service Managers

Note: In some cases, totals do not add to 100 percent because either multiple responses to a question were given or no response was given.

Are your dealership's total sales and profits higher or lower in 1992 than in 1991?

Toyota unveils bigger Corolla

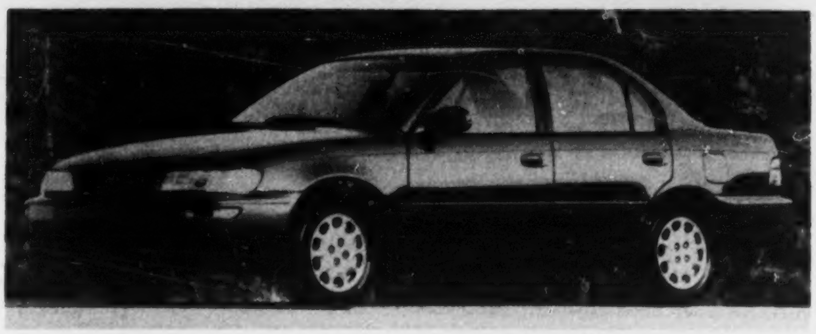
KRISTINE STIVEN BREESE
Staff Reporter

LOS ANGELES — Following what seems to be an industry trend, Toyota Motor Sales U.S.A. Inc. is replacing one of its most popular products with a car that is longer and wider and has more rounded lines.

As Toyota did with the Camry last year, the company is moving the 1993 Corolla farther and farther from its roots as a small, boxy Japanese economy car.

INTRO-'93

The redesigned Corolla is almost two inches longer and one inch wider, and the wheelbase has been stretched 1.3 inches. The new car will be classified as a compact by the EPA, rather than a subcompact.



Toyota's redesigned Corolla LE sedan is available with a four-speed electrically controlled automatic transmission and anti-lock brakes.

The new Corolla was introduced a year ago in Japan, but sales in that country have been disappointing because the model was moved upscale.

The Corolla also is the foundation of Chevrolet's Geo Prizm. All the Prizms and about 70 percent of the Corollas sold in the United States will be built at New United Motor Manufacturing Inc., the Toyota-General Motors joint-venture factory in California.

As with all 1993 Toyota cars, the Corolla will have a standard driver-side airbag. Adjustable front seat belts have been added for a more comfortable fit.

The Corolla sits neatly between Toyota's two other volume sedans, the Camry and the price-leading Tercel. It is 10.2 inches longer than the Tercel and 15.8 inches shorter than the Camry. It's also about four inches shorter than the Saturn sedan and one inch shorter than the four-door Honda Civic.

The sedan is offered in three trim levels — Standard ($11,198), DX ($12,298) and LE ($15,218). A wagon ($12,978) is available in the DX series.

The instrument panel has been updated with larger, easier-to-reach controls.

The 1.6-liter, 16-valve, double overhead camshaft engine is still standard in the base model. The DX and LE models have a new 115-horsepower, 1.8-liter engine. Horsepower in the base engine has risen from 102 to 105, except in California, where emission requirements limit the output to 100 hp.

Toyota says it has reduced engine noise and vibration by adding fluid-filled mounts between the body and engine.

Toyota has added asphalt coating and made other changes to the sheet metal to reduce road noise. Wind noise has been cut by reducing the gap between hood and trunk surfaces from seven millimeters to four. AN

Only one wagon is offered in the Corolla line, this DX model; the All-Trac wagon no longer is offered.

TOYOTA FOR 1993

Model	Wheelbase (inches)	Length (inches)	Width (inches)	Height (inches)	Curb Weight (pounds)	Base engine	Drive type	Body styles

Hall of Fame to induct 7 auto leaders

MIDLAND, Mich. — Seven leaders of the automotive industry will be enshrined in the Automotive Hall of Fame on Oct. 1.

Special tribute will be paid to Frederick Mancheski, chairman of Echlin Inc., an automotive replacement parts supplier in Branford, Conn., as the Automotive Industry Leader of the Year.

Luis Estrada, president of Trader Vic's Used Cars in Pacoima, Calif., will receive the award for young leadership and excellence.

The Hall of Fame is located at Northwood Institute in Midland, Mich. The banquet will be held at the Westin Hotel in Detroit.

The seven inductees are:

- Lee Hunter, deceased, for his inventions that have improved automotive maintenance.
- Wilton Looney, retired chairman of Genuine Parts Co., for developing the concept of a partnership between supplier and customer.
- Henry Nave, president of White Motor Co. and Mack Trucks, for introducing new sales and merchandising techniques to the heavy-truck industry.
- Donald Petersen, former chairman of Ford Motor Co., for leadership in product planning, design and new technology.
- Charles Pilloid Jr., for his contribution to Goodyear Tire and Rubber Co.'s worldwide sales growth.
- James Roche, former General Motors chairman, for his dedication to equal employment opportunity.
- Carroll Shelby, for designing reasonably priced sports cars.

Chrysler leads gains by Volkswagen's rivals in Mexico

MEXICO CITY — A labor dispute at Volkswagen de Mexico's assembly plant hit the company hard in July, as the market's leader saw car and truck sales fall 13.8 percent.

VW's July production fell 33.0 percent from July 1991 levels, after an intra-union squabble led to a company lockout. When work resumed Aug. 24, VW had lost more than a month of production, including the new Golf and Jetta.

VW's troubles leave its rivals in good shape to gain ground. Ford, Nissan and Chrysler — the closest competitors to VW's small cars — all showed strong gains for their Mexican-built cars. They were paced by Chrysler's 34.3 percent gain in July new-car sales.

Despite VW's troubles, the five automakers posted a combined 5.1 percent sales gain for July. After seven months, sales stood 11.1 percent ahead of last year's pace. Production among the five firms dropped 6.4 percent in July, but at 637,625 is still well ahead of last year's seven-month totals. AN

FLEETS

Big 3 trim fleet sales

continued from PAGE 1

total and a fourth of the overall passenger-car market. Automakers put even more of their sales in the fleet column, such as those in manufacture- or dealer-sponsored leasing programs, but the Polk-*Automotive News* compilation treats those as retail sales since customers choose them one at a time.

Through the first half, Ford Motor Co., Chrysler Corp. and General Motors managed to withdraw from the levels of dependence on fleet sales they displayed in 1991, when the Gulf War wrecked the retail market. Their total fleet registrations dropped from 977,466 units in the first half of 1991, 36.4 percent of their total registrations, to 919,599 in 1992, 34.1 percent of their total. The full-year drop will probably be much steeper.

Analyst Chris Cedergren of AutoPacific believes Big 3 sales to rental companies will decline 300,000 to 350,000 units this year. But the first-half figures are distorted because rental companies increased their vehicle purchases earlier this summer when the airlines' ticket-price wars spurred business. "Late May and June came around, and all the rental companies said, 'We're going to rent cars like crazy.' They ordered a tremendous number of cars."

Some of those cars came from the Big 3. Ford, for instance, moved up deliveries planned for July and August, said Ford analyst Joel Pitcoff, "but we couldn't add any units" to production schedules to satisfy rental company demand.

"I suspected when I saw some of the numbers in June that they may have gotten some port units (not yet ordered by a dealer) from the Japanese," said Pitcoff.

Demand from the rental market in the first half coincided with a drop in retail demand for Japanese cars. In Nissan's case, Cedergren said, "they wanted to see if they could shore up that loss" by pricing Sentras for the fleet market.

"Basically, they're just trying to wait for the '93 model year. The Altima will probably erase that decline (in retail sales), based on its pricing," Cedergren said.

He sees the increasing fleet presence of Nissan and Toyota as beneficial to them, especially because of the exposure it brings their cars in markets where their sales are below average, like the Midwest.

At the same time, Cedergren said, oversaturation in the rental business such as the Big 3 have had "can hurt the resale value of your product. It kind of makes your product look too common. But done right, it acts as a good sales tool."

Cars sold to rental companies are commonly described as "less profitable" for factories than cars sold to dealers for retail delivery or sold to other fleets. The Big 3 and several Japanese makers offer discounts on certain fleet sales.

The Polk numbers clearly show shifts among nameplates, but they don't show model changes. Cedergren said several stories are occurring in the model and body-style arenas:

- Cadillac basically transferred its fleet sales "from the old Seville to the DeVille."
- The rebound in Chrysler brand fleet sales is partly a move of units from Plymouth and Dodge. "For the '92 model year, Chrysler took the top two trim levels of Acclaim and rebadged them as LeBarons," on which profits are better.
- Chrysler Corp. successfully moved fleets from the Dodge Shadow convertible to the more profitable LeBaron convertible, which had "an extremely strong May and June" with fleets. The sales surge means the LeBaron probably will regain its crown as best-selling convertible from the Mazda Miata this year. AN

Are numbers helpful?

Are these fleet registration figures by nameplate (listed below) from R.L. Polk & Co. helpful? Could they be more useful?

We'd like to hear from you. If you want to influence the future use of registration figures by *Automotive News*, please write:

William R. Diem
Assistant Managing Editor
Automotive News
1400 Woodbridge Ave.
Detroit, MI 48207

Or fax: 313-446-0383.

Variety of fleets in Polk count

Fleet figures from R.L. Polk are not perfect for measuring program cars. The bulk of Polk's leasing and rental category is daily rental firms such as the Hertz Corp. and Avis Inc., but it includes some commercial lease operations such as PHH Corp.'s FleetAmerica.

Cars registered to large leasing companies often amount to company cars. For instance, DuPont provides some employees with leased cars from PHH.

The commercial and government category includes cars registered by businesses and units of government, including police cars. Figures are based on state registrations, not company announcements.

Registrations are counted as fleet when 10 or more are registered by a single company within a year. If Tom's Delivery Service registered nine cars in the first six months, they are still considered retail. If it registers another car in August, all 10 move into the fleet column. Thus, Polk's latest numbers are always the most accurate.

The *Automotive News* fleet figures do not include cars registered to manufacturers, dealers or financial institutions. Those units usually amount to individual leases.

In total, the fleet registration numbers also provide a reliable guide to their opposite number, the retail market, where purchase and lease acquisition decisions are made one-by-one. Thus, overall car registrations for the first six months this year were down slightly, but subtracting fleet cars reveals that retail registrations rose 1 percent, 3,014,820 in 1991 to 3,044,674 this year.

— William R. Diem

Chrysler picks Sidlik for new VP position

HIGHLAND PARK, Mich. — Chrysler Corp. last week named Thomas Sidlik to the newly created post of vice president of customer satisfaction and vehicle quality.

Sidlik will report to Vice Chairman Robert Eaton. Sidlik, who joined Chrysler in 1980, has been executive director of sales and marketing planning and warranty programs.

Sidlik's duties: customers, quality

The new organization Sidlik will direct includes the corporation's activities that relate to customer requirements and expectations, Chrysler said.

Also last week, Thomas Gallagher was named vice president of employee relations. He replaces Anthony St. John, who retired. Gallagher had been executive director of employee relations.

He will direct a realigned department that includes union relations and security operations, health care and benefit administration, occupational safety and health services, personnel planning and administration, and joint training activities at the UAW/Chrysler National Training Center.

Gary Valade was named vice president of corporate personnel. He had been vice president of personnel, administration and development.

Valade will lead departments that include compensation and benefits planning; the group personnel offices at Chrysler Center, Chrysler Technology Center and manufacturing; equal employment planning; facilities and services; personnel department; training; and Chrysler Pentastar Aviation Inc. AN

PRICES

Japanese increases top Big 3 hikes

continued from PAGE 6

compares with 2.98 percent, or $531, for the Big 3.

OTHER PRICE HIKES

Lexus Division hiked comparably equipped models an average of 2.9 percent, or $1,013. Passenger-side airbags now are standard on the top-of-the-line LS400 sedan and on both Lexus coupes.

Infiniti raised prices $400 on the G20, $1,000 on the J30 and $1,300 on the Q45. All are four-door sedans.

Automotive News estimates the increase at 2.5 percent, or $783 on comparably equipped models.

Much of Jaguar's price cut was achieved by pulling the V-12 engine out of the XJS coupe and convertible.

A six-cylinder powerplant now drives the sports cars and the XJ6 sedans.

By dumping the V-12, Jaguar escapes the gas-guzzler tax, which was $2,400 on the coupe and $3,000 on the convertible. The sticker on each of the sports cars is $10,750 less for 1993. The sedans now have driver-side airbags.

Saab said its 1993 prices are up an average of 1.8 percent, which *Automotive News* estimates at about $500.

Saab model designations have been changed for 1993, making comparisons difficult. AN

SALES

13-million goal fades for year

continued from PAGE 6

unit market for this year. Industry analysts and executives had pinned hopes on sales of 13.3 million to 13.5 million cars and trucks for the year.

"I cannot be very optimistic about growth in the auto industry in the current economic climate," said Takeshi Jingu, economist for Nomura Securities International Inc. in New York. "The signs are very weak, especially the employment data. I am thinking of revising my forecast downward."

Ronald Glantz, senior vice president with Dean Witter Reynolds Inc. in San Francisco, suggested that some unusual circumstances held down August sales — especially Hurricane Andrew, which devastated southern Florida and pockets of Louisiana late in the final days of the month.

"We need to take 50,000 units out of the forecasts just for the hurricane, and probably another 50,000 units for what the hurricane is doing to consumer confidence," Glantz said.

He added that some of the industry's normal volume of late-summer fleet sales was pushed into June and July to accommodate the spurt in air travel resulting from this year's fare wars.

"A lot of weird things are going on out there," he commented. "But maybe it's not as bad as it looks."

Light-truck sales continued to buoy a weaker car market in August. In the first eight months of the year, the industry sold 3,093,030 light trucks, a 10.8 percent gain from a year earlier.

Industry car sales were off nearly 46,000 in August, for a total of 644,816. For the first eight months of this year, car sales were down 18,528 units.

Ford Motor Co. alone has accounted for nearly half the improvement in truck sales. In August, Ford truck sales rose 24 percent to 125,102 units. A Ford spokesman said truck growth has led the company in a month-over-month sales increase all year.

Chrysler Corp. also experienced hefty truck growth during the month, due to increasing momentum on minivans and sport-utility sales. Chrysler sold 11,000 more trucks than in August of last year.

General Motors' high-volume Chevrolet/Geo line contributed a large share of the decline in car sales. In August, Chevrolet sales totaled 75,052, down 9,656 cars from August 1991. For the eight-month period, the line has dropped more than 105,000 sales.

By comparison, Chevrolet/Geo truck sales were up 14,000 units in August to 104,372.

"What's selling now is the type of truck that appeals to car-buyers," said Chrysler spokesman Tom Jakobowski. "Our minivans and Jeeps are doing well. We're seeing customers trading in cars for minivans." ■

SATURN

Tight supplies rob workers' discount

continued from PAGE 1

more than a month before there is true dealer stock, even if production resumes this week at Saturn's plant.

And GM of Canada employees will get no discount at all.

Saturn employees have been asked to wait until November to begin purchasing 1993 model cars in order to let dealers build up inventories.

Additionally, the discount for Saturn and other GM employees has been limited to the actual employees, their spouses and children living at home. Under normal GM policy, the discount is loosely extended to employees' siblings, parents and in-laws as well as to retirees and their survivors.

"It's a supply issue. We just don't have the cars," said James Farmer, Saturn vice president of communications. "Right now, we need to push every piece iron that we can out the door. There are customers waiting."

Saturn Corp. also has stopped making Saturns available to other GM divisions for use as company cars and has made non-Saturn employees ineligible for discounts on Saturn program cars and leases.

"We could spend the entire year just making cars for GM employees," Farmer said. "We just don't have enough to go around."

Three factors have limited the supply of Saturns. Positive public reaction spurred sales. The Spring Hill, Tenn., factory had not yet reached full capacity as the 1992 model year ended. And just as the 1993 model was beginning, production crashed as a strike in Lordstown, Ohio, shut off critical parts.

Dealers weren't particularly happy. "We don't like to disappoint customers," said Sherrill Freeborough, a sales consultant at Saturn of Plymouth, Mich. "It will be disappointing to some GM employees for us to tell them 'No' on their discount."

GM execs lose free cars

JACK KEEBLER

Staff Reporter

General Motors employees at salary grade 8 or higher soon will have to pay for what had been free new cars.

As of Oct. 1, they will pay a $100 "monthly administration fee" for participating in the company's mandatory product evaluation program known as PEP. One employee described it as "a $1,200 annual pay cut."

A GM spokesman refused to discuss the program or its details.

The elimination of the perk for executives will be psychologically helpful in negotiations with the UAW next year, and the IRS is less likely to treat the new program as taxable.

Previously, GM executive participants drove an average of four new vehicles a year free of charge as part of early field-evaluation programs. They submitted reports on the vehicles.

The executives also had to buy a new vehicle every year; the new program lets them buy a new vehicle every two years. GM will continue to pay for fuel, oil, insurance and maintenance.

Another change also makes it less likely that the IRS will tax the value of a loaned car as income. Before, executives could pick the car or truck they wanted. Now, they must take what they are given.

Participation is now required for all eighth-level professional, technical and executive employees. An internal memo described the program as "an integral part" of their job responsibility.

The old program covered only corporate executives and the car divisions; the new one covers executives at other GM divisions.

A second program called the lease evaluation program has been eliminated. It allowed employees to lease vehicles for about 1 percent of the sticker price per month.

Chrysler rebates include '93 models

ARLENA SAWYERS
Staff Reporter

Chrysler Corp. announced a new retail incentive program that includes 1993 vehicles as well as 1991s and 1992s.

It began Sept. 1 and ends Sept. 30, the day before the official introduction of Chrysler's carryover vehicles for the 1993 model year.

The rebates range from $500 to $1,500 on **Chrysler, Dodge, Eagle** and **Plymouth** cars, and $500 to $2,000 on Dodge and **Jeep** trucks.

Rebates on minivans range from $500 to $1,000.

In lieu of rebates, consumers may choose finance contract interest rates that range from 4.9 percent to 9.9 percent.

Minivans are excluded from the rebates on 1993 models, but the list includes a wide range of cars and trucks.

Top payments on the 1993s are $1,500 on the Chrysler LeBaron coupe and the Dodge Ramcharger and the Ram pickup equipped with a gasoline engine.

Chrysler's "no charge equipment sale" that was limited to select 1992 models has been broadened to include three 1993 models.

Under the program, buyers of 1992 and 1993 Plymouth Acclaim, Dodge Spirit and Chrysler LeBaron sedans receive seven equipment items at no additional charge.

The no-charge items are air conditioning, tilt steering wheel, automatic speed control, extra speakers, floor mats, electric rear defroster and tinted glass. Tinted glass has been made standard

incentive
WATCH

equipment on the 1993 models.

The value of the equipment on the 1993 models is $1,493; the value of the equipment on the 1992 models is $1,605.

Other Chrysler incentives:

- $500 reimbursement to physically challenged buyers who install adaptive equipment on their vehicles.
- $500 to first-time vehicle buyers who buy 1992 or 1993 Dodge Daytonas.
- $500 to college graduates on any 1992 and 1993 vehicle except the Dodge Viper.

The equipment offer expires Oct. 31; the college graduate program ends Dec. 31. Other incentives expire Sept. 30. AN

Excel ('92)	$500-750
Scoupe ('92)	$500-750
MAZDA (1992 models, expire Sept. 8)	
Protege, MX-6	$1,400
626	$1,200
MPV	$1,000
Navajo	$750-1,500
Pickups	$750-1,000
Navajo and pickup rebates vary by model and region.	

GM credit card ready to roll

General Motors begins the rollout of its general-purpose credit card today. A two-day teaser campaign on network TV leads up to a Sept. 9 unveiling of the program.

Four teaser spots on network programming will lead to the launch of the MasterCard program, according to executives familiar with the effort.

GM will back the introduction with a $70-million-plus ad effort, according to *Advertising Age,* a sister publication to *Automotive News.*

The teaser spots highlight the way in which the card will enable a user to build credits toward the purchase of a new vehicle, parts or service.

Plans for a longer Lexus LS400 have been dropped.

LEXUS

Exec rules out V-12, stretched LS400

continued from PAGE 3

Shimizu said the "standard solution" would be to make the car bigger. But this, he stressed, could raise even thornier problems.

"The standard solution may call for a bigger car," he said. "But that might make Mercedes or BMW management more angry."

German manufacturers have complained in the past that the Japanese are selling luxury cars in the United States at artificially low prices to win market share. The criticism, however, has quieted recently, and Toyota insiders say they aren't anxious to rile the Germans once more.

Shimizu said that keeping the Lexus image clearly polished was another important consideration that argued against a bigger car.

"Politics is one of the factors, yes," he said. "But, basically, we must have a certain character to keep our image. Following others is not a good way to keep or to build a certain image. Lexus is Lexus and we must think about new ideas."

Shimizu said he is not concerned about forfeiting a piece of the U.S. luxury-car pie to the Germans by default. "This is a very personal opinion, but we still don't have enough image to attack the highest end of the market," he said.

"The other point you must remember is that we have an export quota," Shimizu added. "We must also sustain the Toyota franchise, so we cannot cut the volume for the Toyota franchise."

Mercedes and BMW also offer V-12s and there have been whispers that Lexus might follow suit for its flagship. But according to Shimizu, Toyota has backed off for environmental reasons.

"Over $50,000 (Mercedes and BMW cars) offer the long wheelbase version with V-12," he said. "But we think that V-12 engines will not be allowed in the future because of environmental considerations. Fuel economy is getting much more important."

Toyota had never considered a V-12 for its Lexus line, he added.

Shimizu also ruled out a bigger V-8 for the Lexus flagship, which is now powered by a 4.0-liter, 32-valve engine developing 247 horsepower. "Our current V-8 engine offers enough performance for the car," he said.

Two U.S. Lexus dealers said they agreed with Shimizu that a move upscale with a new car would blur the franchise's image.

"There's a lot of danger in being a Mercedes clone when we've established ourselves as a leader," said Jay Beskind, general manager and partner of Scottsdale Lexus in Scottsdale, Ariz. "We would lose that position if we think we have to have a car like every car Mercedes sells."

Danny Davidson, owner of Riverside Lexus in Riverside, Calif., said he understood that a bigger car was still part of Lexus's long-term plan. "But I am definitely satisfied. The lineup is fine without it." AN

Mertz's goal: maintain Buick's share

ARLENA SAWYERS

Staff Reporter

GROSSE POINTE SHORES, Mich. — Despite a weak market and the delay of the redesigned Riviera, Buick expects to maintain its market share in 1993.

Edward Mertz, Buick general manager, plans to do that with a new customer satisfaction program and continued emphasis on product quality.

"We don't forecast sales numbers," said Mertz. "We want to stay in the 6.4 percent to 6.5 percent market share minimum, whatever the market happens to be. Our ultimate target is still 8 percent. I have hopes we will maintain our sales this year."

Buick's sales for the first seven months of the 1992 calendar year were down about 2.8 percent, dropping its market share to 6.4 percent, compared to 6.7 percent for the same period last year.

Mertz said early plans called for the redesigned Riviera to debut in the 1993 model year, but the car was delayed for "purely capital" reasons. The new Riviera is now scheduled for the 1994 model year.

But Mertz added: "Neither we nor the company plan to drop any car lines." (Buick's 1993 model story appears on Page 16.)

In an effort to enhance customer satisfaction, Buick has instituted Buick Courtesy Transportation, which provides the buyer of a 1993 Buick with free transportation when a car is serviced.

Buick's 1993 ad campaign will continue to stress product quality, and in the case of Skylark, affordability, said Jay Qualman, Buick advertising manager.

Meanwhile, a print ad comparing the Park Avenue with the Lincoln Continental carries the former Buick themeline: "Now . . . wouldn't you really rather have a Buick." Qualman said the themeline is being used because it is appropriate for that ad. It will not be revived for the entire campaign.

Buick also will advertise on daytime TV in an effort to reach more women.

GM loses 24,415 in walkout

GWENDOLYN ZONGHETTI

Special Correspondent

General Motors has lost production of 24,415 cars and trucks since the strike at the Lordstown, Ohio, metal stamping plant began Aug. 27.

Six car plants and one truck plant have closed.

August vehicle production in the United States and Canada topped the year-ago month by 7.3 percent. Cars increased 0.2 percent, and trucks rose 17.7 percent. It was the highest August ever for Canadian truck production, which reached 75,874.

In the United States last week, 100,243 cars were produced, down 10.3 percent from the prior week and up 8.3 percent over the year-ago week.

Year-to-date car production in the United States is 3,822,407, up 5.1 percent over 1991.

U.S. truck production last week was estimated at 77,758, falling 12.5 percent from the prior week but rising 20.2 percent over the year-ago week.

Year-to-date truck production in the United States is 2,658,999, up 18.2 percent from the same period in 1991.

In Canada last week, carmakers assembled 22,088 units, down 0.4 percent from the prior week but up 13.7 percent from the same week in 1991.

So far this year, Canadian automakers have produced 698,095 units, down 4.8 percent from last year.

Truck production in Canada last week was scheduled at 15,731, down 15.8 percent from the prior week and 10.1 percent from the year-ago week.

Year-to-date truck production in Canada is 673,165, up 23.0 percent over 1991.

Last week scheduled car and truck production was shared as follows:

Ford Motor Co., 31.2 percent; General Motors, 29.7 percent; Chrysler Corp., 18.1 percent; Honda of America Manufacturing Inc., 5.2 percent; Nissan Motor Manufacturing Corp. U.S.A., 3.8 percent; AutoAlliance International Inc., 3.0 percent; Toyota Motor Manufacturing (U.S.A.), 2.7 percent; Diamond-Star Motors Corp., 1.5 percent; Subaru-Isuzu Automotive Inc., 1.5 percent; miscellaneous, 1.1 percent; New United Motor Manufacturing Inc., 1.1 percent; Navistar International Corp., 0.9 percent; AM General, 0.2 percent.

GM's Janesville, Wis., Suburban truck line worked two shifts of overtime last Friday.

Because of the GM strike, the daily build rate fell to 43,164 last week, down 10.6 percent from the previous week.

Last week, Ford slated daily overtime at two car plants and three truck plants. The car plants were Atlanta and Chicago. The truck plants were Kansas City, Mo.; Louisville, Ky.; and St. Louis.

All U.S. plants are down today in observance of Labor Day.

NHTSA checks Ford subframes

WASHINGTON — The National Highway Traffic Safety Administration has begun a paperwork investigation of reported subframe failures on the Lincoln Continental and the Ford Taurus/Mercury Sable.

The study stems from three complaints of a corroded washer that allowed two sections of the subframe to separate. That could result in loss of steering control, NHTSA said.

About 1.5 million cars could be affected. They include 1988-89 Continentals and 1986-89 six-cylinder Taurus/Sable models.

NHTSA has upgraded its look at front seat-belt failures in 1987-90 Chevrolet Corsicas and Berettas. The belts reportedly fail to latch or may appear to latch when they aren't engaged, NHTSA said.

Other new preliminary investigations: 1992 Dodge

EC rulemakers slap Chrysler

Eurostar aid from Austria may mean duty on vans

ED WENDT
Staff Correspondent

LONDON — In a move that could cost Chrysler Corp. an indicated $106 million and tack a 10 percent duty on every minivan it builds in Europe, the European Commission ruled last week that the automaker had received illegally high subsidies from Austria when it built its joint-venture Eurostar plant in that country.

The commission, the executive arm of the 12-nation European Community, ruled that the $140.6 million subsidy Austria gave Chrysler to build its $426 million plant far exceeded the EC's 8 percent allowable ceiling on such state aid. It gave Austria until Sept. 30 to get back the difference from Chrysler — an indicated $106.6 million — or 10 percent duties will be imposed on Eurostar's exports to the EC.

Because Austria is not an EC member, the commission is not empowered to impose the penalties directly. If not resolved by the deadline, the issue will go to the EC's Council of Ministers for action or compromise.

Under a 1972 treaty allowing free trade between Austria and the Community, subsidies that "distort competition" are illegal. The complaint was filed on those grounds by France's Renault SA, which markets Europe's best selling minivan, the Espace.

The deadline was imposed after the commission and Austria failed to find grounds for compromise on the dispute, which involves Chrysler's joint venture with Steyr-Daimler-Puch GmbH in Graz. An offer by Austria to reduce the subsidy to 20 percent was rejected.

The Eurostar venture, which came on stream April 29, is scheduled to produce about 13,000 Plymouth Voyagers this year, rising to about

Big 3 trim efforts to lure black dealers

Backlog of trained candidates grows

KATHY JACKSON
Staff Reporter

The Big 3's method of recruiting and training blacks to be car dealers is changing.

For the past 20 years, Ford Motor Co., General Motors and Chrysler Corp. have operated training academies to help blacks learn the retail auto business.

But Chrysler is the only company still recruiting new students the traditional way.

GM has not offered a class in nearly two years.

Ford graduated 17 students in April; 18 will graduate in October; and no new classes are scheduled.

"That's kind of frightening in a way," said David Smith, manager of Ford's Minority Dealer Operations and Training Program.

Both GM and Ford are looking at alternative ways to continue to move blacks through the system.

Those include sending candidates to successful black dealerships for training or to prestigious

Audi meshes with VWoA; Young runs unified plan

ARLENA SAWYERS
Staff Reporter

The modified corporate structure at Volkswagen of America Inc. signals a more unified company and a firmer commitment to the U.S. market, analysts say.

It also clarifies William Young's control over both divisions.

Young is VWoA president and chief executive officer. Officially, Richard Mugg, the retiring Audi of America vice president, always reported to Young, but some insiders say the lines of communication were blurred and Mugg reported directly to executives at Audi AG in Germany.

"Mugg never worked for Young," said one company observer. "Audi was always independent and did things on its own. Now Young will take over full responsibility of marketing both divisions."

The new corporate structure is clear: the newly appointed vice presidents of VW United States Inc. and Audi of America Inc., respectively, will report to Young.

Reorganization came quickly.

On Sept. 4, the company announced that Thomas Shaver would would become vice president of Volkswagen United States. Four days later the company announced the appointment of Gerd Klauss as vice president of Audi of America Inc. Each man is responsible for sales, marketing, and executive management of his respec-

Economy dogs Bush; Clinton's party hurts him

Industry choice clear but hard

MAX GATES
Staff Reporter

ELECTION ★ '92 ★

WASHINGTON — For the U.S. auto industry, the 1992 presidential election boils down to a clear but difficult choice:

Stick with Republican George Bush, 68, a known quantity who sings the industry's tune on such issues as fuel economy but can't move the economy. Or take a chance on Bill Clinton, 46, whose intriguing ideas on managing the economy will be weighed against old fears of doing business under a Democrat.

Trade, health care, fuel economy and the economy itself will be hot buttons for auto interests this fall. And each candidate still has time to get a message across.

Ford Motor Co. President Philip Benton, for example, says Bush's economic agenda, announced last week in Detroit, reflects a "pulling together of disparate concerns that could represent a sound program." Yet he said he wanted more specifics, and he's still not sure where Bush stands on health care.

Of course, there's no guarantee that the auto industry will march in step on any single issue.

U.S. automakers like Bush's North American Free Trade Agreement with Mexico, but they think he can do a lot more to pry open Japan's markets.

Japanese automakers don't like the North American trade deal, but they support Bush's opposition to import barriers. Import dealers fear Clinton on fuel economy and trade, yet were saddled with a luxury tax under Bush.

Most everyone thinks that the $350 billion budget deficit is dangerously large and the economy is moving too slowly.

Economy tops dealers' agenda

WASHINGTON — The economic outlook and strategies for dealing with the next Congress, which may have as many as 150 new members, top the agenda as 400 auto dealer leaders meet in Washington today through Wednesday.

Speakers for the annual legislative briefing, hosted by the National Automobile Dealers Association, include U.S. Sens. Robert Packwood, R-Ore., on trade and Pete Domenici, R-N.M., on the budget and the economy. NADA Chief Economist Thomas Webb will present his economic outlook. NADA President Richard Strauss also will address the conference.

Leaders of state and metropolitan dealer associations will be briefed on the current status of government issues, including IRS cash reporting rules.

AIADA sets up Andrew fund

WASHINGTON — Import dealers have set up a disaster relief fund to assist dealership employees put out of work by Hurricane Andrew.

More than 20 dealerships were damaged or destroyed when the hurricane ripped through south Florida in late August.

"Dealers have insurance to cover the loss in brick and mortar, and even the business interruption," said Fritz Hitchcock, chairman of the American International Automobile Dealers Association. But he said many dealership employees are homeless and have no way to make a living.

The association has set up the AIADA Disaster Relief Fund at P.O. Box 27024, Richmond, VA 23261-7024. All donations will go to dealership employees and their families.

GM cancels show exhibit

General Motors canceled plans for a corporate exhibit at Detroit's North American International Auto Show in January, a spokesman confirmed.

In the past, GM has had a separate corporate exhibit, encompassing about 15,000 square feet, in addition to exhibits for each of its vehicle divisions. But the exhibit planned for the 1993 show was canceled to cut costs, said spokesman David Sloan. Sloan would not say how much GM might save, but a GM source said it could be about $1 million.

— Phil Frame

Ford takes over homologation

BENICIA, Calif. — Ford Motor Co. is taking more control over its exports to Japan.

The company will modify all of its Japanese exports at Ford's predelivery center in California, rather than have its Japanese partner Mazda make the changes in Japan.

Changes such as lighting and fender flares must be made to Ford vehicles to meet Japanese legal requirements.

Ford spokeswoman Judith Muhlberg said Ford will save money and Ford engineers will have more control over timing and quality by making the changes in America.

CBS belt show angers makers

WASHINGTON — Auto industry interests reacted strongly Friday to a TV report claiming that a design defect can cause some safety belts to unlatch during a crash.

The CBS report, aired Thursday on the show "Street Stories," alleged that a phenomenon known as "inertial unbuckling" has been implicated in several cases where belts failed during a crash. Inertial unbuckling can occur when a buckle with release buttons on the side is struck sharply on the back by a hard object.

The industry-backed American Coalition for Traffic Safety said at a press conference that there is no evidence that inertial unbuckling occurs during the real-life auto crashes. President Philip Haseltine accused CBS of airing a biased report that failed to give counter arguments.

An estimated 150 million of the buckles are installed in U.S. vehicles.

— Max Gates

GM cuts funds for rental ads

General Motors' cost-cutting mission is spreading to rentals and could result in the biggest marketing changes ever in that field.

For the 1993 model year, GM is virtually eliminating the cooperative advertising allowances it gives Avis Rent-A-Car and National Car Rental System. As a result, Avis and National said they will immediately cut ad spending by as much as 25 percent, according to *Advertising Age,* sister publication to *Automotive News.* GM is part-owner of both Avis and National.

— Crain News Service

Nissan delays Micra launch

LONDON — Nissan Motor Manufacturing U.K. Ltd. said last week it has postponed the introduction of its all-new Micra until January.

Nissan said it made the change to avoid the possibility of getting caught in a disruptive market late this year when manufacturers are expected to try to dump thousands of cars not equipped with catalytic converters.

A European Community rule requires that all new cars sold after Jan. 1 be equipped with catalytic converters. Cars without catalysts must be sold as used cars. Barring a waiver to the rule, analysts expect makers with large inventories to dump their non-catalyst cars on the market at giveaway prices.

The Micra, which is built in Sunderland, England, was scheduled to go on sale in Britain Nov. 19. Nissan said it will now reach showrooms in early January.

— Ed Wendt

briefly

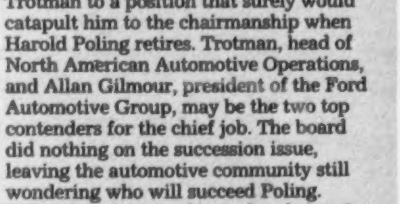
Saturn dealers are crushed

Saturn Corp. last week began pulverizing more than 1,000 never-owned or little-driven cars on its Spring Hill, Tenn., factory property. In May 1991, Saturn recalled 1,836 cars that contained corrosive engine coolant. Some recalled cars were fixed up and sold to employees or given to schools, and 120 were cut in half to make dealership displays. The rest become a de facto recycling test: They're being unconstructed, sorted by material, crushed, shredded, recycled and disposed of, said a spokesman, in an as environmentally conscious way "as possible."

A SUBTLE HINT — Ross Roberts, listen up. As head of **Ford Division,** you might want to win a race. The usually media-shy Bob Rewey, **Ford Motor Co.'s** vice president of sales for North America, showed last week that he can use the press. At a media briefing, Rewey was asked if he cared whether the Taurus (with calendar-year sales of 238,352 through August) catches the **Honda** Accord (262,614) for U.S. car sales leadership. "Sales leadership is as desirable a sales tool as it's ever been," he replied. "You can quote me to Ross."

FALSE ALARM — All eyes were on **Ford** world headquarters last week after *The New York Times* reported that the board of directors was set to promote Executive Vice President Alexander Trotman to a position that surely would catapult him to the chairmanship when Harold Poling retires. Trotman, head of North American Automotive Operations, and Allan Gilmour, president of the Ford Automotive Group, may be the two top contenders for the chief job. The board did nothing on the succession issue, leaving the automotive community still wondering who will succeed Poling. Poling is being coy about when he's going to leave. But a company insider says one board member insists that Poling leave in March when his scheduled three-year tenure is up.

DUAL DEPLOYMENT — **Chrysler Corp.** acknowledged in August that it put early production LH models into Florida rental fleets to get fast feedback on quality, durability and crash performance. It seems Florida's humidity, high temperatures and renter's long mileage put vehicles to the durability test. And last week, a family visiting Florida from Ireland tested a rented **Eagle** Vision's dual airbags. According to Chrysler, the couple and their two children walked away unharmed. A side note: the company produced its 3 millionth airbag-equipped vehicle last week. It was a **Dodge** Intrepid ES produced at the Bramalea, Ontario, plant and destined for Security Dodge in Amityville, N.Y.



The del Sol finds its niche.

SOOOO COOL — Southern California's beach community is being introduced to the new open-top **Honda** del Sol coupe with mammoth billboards that loom over freeway off-ramps that lead to the area's most posh beach cities, such as Newport Beach and Marina del Rey. Pass the sunscreen.

Ford slashes Thunderbird, Cougar prices

Automaker expects strategy to add to sales momentum

Ford trims models throughout '93 lineup ➤ 22

Ford Motor Co. last week slashed prices and simplified the model lines for the Ford Thunderbird and Mercury Cougar.

The move expands Ford's strategy of gaining market share through value pricing and simplifying both the buying experience and manufacturing complexity.

Across its product line, Ford said it reduced previously announced tentative 1993 price increases to just 0.3 percent, or $63, above comparably equipped 1992 cars. In July, the company announced tentative car price increases averaging 2.9 percent.

Ford's new pricing followed an increase of 1.6 percent by General Motors and a tentative hike of 2.6 percent by Chrysler Corp.

With the Thunderbird and Cougar, Ford adopted a program that sharply increased sales and market share in a California test.

For 1993, Ford knocked $2,986, or 15.9 percent, off the price of its 1992 Ford Thunderbird LX and $1,606, or 9.8 percent, off the sticker of its 1992 Mercury Cougar LS.

The 1992 Cougar XR7 has been dropped, and the LS has been rebadged XR7 for 1993.

Ford has dropped its base model Thunderbird, which was $16,345, bringing in the better-equipped Thunderbird LX at $15,797. The 1993 Cougar has upgraded seats and interior trim. The sticker price is $14,854, compared to $16,460 for the 1992 Cougar LS model.

Robert Rewey, vice president of sales for Ford's North American Automotive Operations, said the company hopes to get 60,000 more units in the 1993 model year from its Lorain, Ohio, plant that makes the two coupes. Through 11 months of the 1992 model year, Ford sold 120,305 Thunderbirds and Cougars in the United States.

Rewey said Ford's strategy is aimed at simplifying the buying experience for customers. Ford is shifting "fire-sale values" into a more rational, regular pricing structure, he said.

Rewey: Make buying easy

In May, Ford went national with one-price packaging on specially equipped Ford Escort LX models, at $10,899, and followed that with value-priced Mercury Tracers at $11,665. Ford's one-price strategy puts a single sticker price on well-equipped versions of all body styles of a model, such as sedans, hatchbacks and wagons. Those prices are still typically negotiable.

The virtually flat average pricing for 1993 won't hurt Ford's profitability, Rewey said. Asked if dealer grosses were trimmed, he responded: "Nothing envisions us getting higher share at the expense of dealership profitability. We got at least the advice, and I think the consent, of our dealers."

Ford's marketing programs have helped move the iron. In calendar 1992 through August, the company's share of the car and light-truck market rose 1.5 points to 24.4 percent, while the Japanese makers lost 1.6 percentage points. ■

Raymond Serafin, Detroit bureau chief for Advertising Age, *contributed to this report.*

Amati considers one-price strategy

KRISTINE STIVEN BREESE
Staff Reporter

> ❝The basis of one-price is that it produces a hassle-free shopping environment. That's what consumers say they want. Getting to hassle-free is our goal, how we get to that is still being decided.❞
>
> **RICHARD COLLIVER**
> AMATI GENERAL MANAGER

LOS ANGELES — Amati Division is studying the one-price sales concept as a way to set itself apart as a luxury carmaker.

The luxury division of Mazda Motor of America Inc. has been surveying customer-satisfaction experts in diverse businesses. Within the industry, Amati is looking at variations of the sales themes that have become popular at Saturn, Ford Division and hundreds of dealerships.

Saturn dealers use a no-negotiation procedure; other dealers post a no-haggle price on individual models; and Ford Division puts the same tag on several body styles within a car line.

"Maybe one advantage we have is what's going on with the non-negotiable price movement," said Richard Colliver, Amati general manager.

"We've been able to study that before launch, and something like that is always easier to implement from the start than to try to get dealers to sign on after they've been out there doing it the other way."

Colliver said that doesn't mean Amati is going to adopt the strategy, but he said "the door is open." The company plans to introduce two sedans through a new dealer network beginning in spring 1994.

"The basis of one-price is that it produces a hassle-free shopping environment. That's what the consumers say they want," Colliver said. "Getting to hassle-free is our goal, how we get to that is still being decided."

Amati enlisted the help of in-house customer satisfaction experts at Xerox, IBM, Ritz-Carlton, Whirlpool and other firms last spring. During a seven-week period, they answered questions from Amati in an electronic conference.

"Nothing earth-shattering came out of the conference, but it reaffirms that when it comes to customer satisfaction, we have to do it every day, all day," Colliver said.

"It has to start with me, go through the organization to the dealers and then to the customer. It has to be one continuous loop, focused on giving the customer what he wants."

Colliver admitted that the notion sounds a lot like what other companies are saying. The difference, he said, will be putting it into practice.

Colliver said Amati has found "a few flaws" in the Lexus operation, but it's still the benchmark.

Amati spokesman Jack Nerad said Lexus salespersons are still trained in the classic "close them today" mode. That creates tension, he said, that Amati wants to avoid.

But Colliver said Lexus knows its own flaws. So, he acknowledged, it will be tough to beat Lexus to the market with solutions to problems Lexus has already identified. ■

The Bentley Brooklands, a new "entry-level" model from Rolls-Royce, carries a sticker price of $138,500.

Acura, Porsche, Rolls-Royce raise prices

JOHN K. TEAHEN JR.
Senior Editor

Acura prices have risen an average of $582, or 2.5 percent, for 1993 with individual models climbing $350 to $1,200.

In other price news last week, Porsche Cars North America Inc. said its 1993 sports cars will go up an average of $894, or 1.4 percent, and Rolls-Royce and Bentley tacked $5,200 to $7,300 (3 percent) onto the stickers of most of their ultra-luxury motor cars.

Acura's increase may grow a bit when the pricing of its 1993 line is complete. Legend coupes and the NSX will be priced when they go on sale in December.

Last week, Acura hiked Integra three-door hatchbacks and four-door sedans $350 apiece. The Vigor LS sedan went up $600, and the Vigor GS rose $1,100. The base Legend sedan jumped $1,200, and the Legend L and LS sedans climbed $800.

Porsche's increase was tempered by a mere $100 hike on the 968 coupe. Other models rose $900 to $1,470. Porsche increased the destination charge $25 per car; it's now $725. The company said option prices are up an average of 2.5 percent for 1993.

Rolls-Royce Motor Cars Inc. has a pair of new Bentley Brooklands sedans replacing the Mulsanne S. The Brooklands is $138,500 and a long-wheelbase version is $152,400. The 1992 Mulsanne was $149,900. The Silver Spirit II "price leader" has departed from the Rolls-Royce lineup for 1993.

Prices of the Rolls Touring Limousine and the Bentley Continental R two-door are unchanged for 1993. The limo is $310,000; the Continental R is $261,800. ■

GM reassigns another executive to Isuzu

CAMI vice president is 3rd to get nod this year

RICHARD JOHNSON
Staff Reporter

TOKYO — General Motors continues to bolster its management presence at its financially beleaguered Isuzu Motors Ltd. affiliate with the addition of another top American executive.

Michael Nylin, 40, formerly vice president of finance at GM's Canadian joint venture, CAMI Automotive Inc., assumed the post of co-manager for corporate planning Sept. 1.

He is the third GM executive appointed to Isuzu since the U.S. automaker assumed a more active role in the Japanese company's operations earlier this year.

Nylin is expected to be named a director of the company at Isuzu's January directors' meeting. He will report to Isuzu executive vice president Donald Sullivan.

GM, which owns 37.4 percent of Isuzu, deepened its management role in the Japanese company with the addition of Sullivan in January.

The highest-ranking foreigner at any Japanese automaker, Sullivan is responsible for corporate, product and production planning, and engineering. He reports to Isuzu's new president, Kazuhira Seki.

Along with Sullivan, former GM executive Philip Murtaugh was named a director of Isuzu and assistant general manager of product planning in January.

Nylin joined GM in 1979 as a statistician on the corporate finance staff in Detroit and held several finance positions before being promoted to director of North American product program analysis in March 1987.

He moved to GM's Flint Automotive Division in December 1988. In 1990, Nylin joined CAMI, the 50-50 joint venture between GM and Suzuki Motor Corp. ■

GM, Renault consider dissolving Latin America agreement

SAO PAULO, Brazil — General Motors do Brasil appears to be ready to scrap a 1-year-old mutual-aid pact with the Argentinian subsidiary of France's Renault Group.

Under the accord, GM do Brasil and Renault Argentina import and sell one another's vehicles on a duty-free basis. In Argentina, GM's Chevette subcompact and Chevrolet pickup are rebadged as Renaults and sold through that company's dealers; in Brazil, Renault's Trafic light-commercial van is rebadged and sold through GM dealers.

By helping each maker compensate for its absence in the other's market, the agreement helps the two compete with Autolatina, the Ford-Volkswagen venture, and Fiat S.p.A.

Although the accord has generated some additional volume for GM and Renault, both indicate that it will not be renewed when it expires next year.

A GM spokesman confirmed last week that the company is negotiating with Iveco, the Italian truck maker that is part of the Fiat Group, to set up a joint-venture plant in Argentina to build cars and trucks from kits. According to the spokesman, the talks are in the preliminary stage.

And separately, a Sao Paulo import firm said it will begin marketing four Argentina-built Renault models in Brazil in October. The company said it expects to import 3,000 units this year.

Saturn sales dip to No. 2

ANNE E. WRIGHT
Chief Statistician

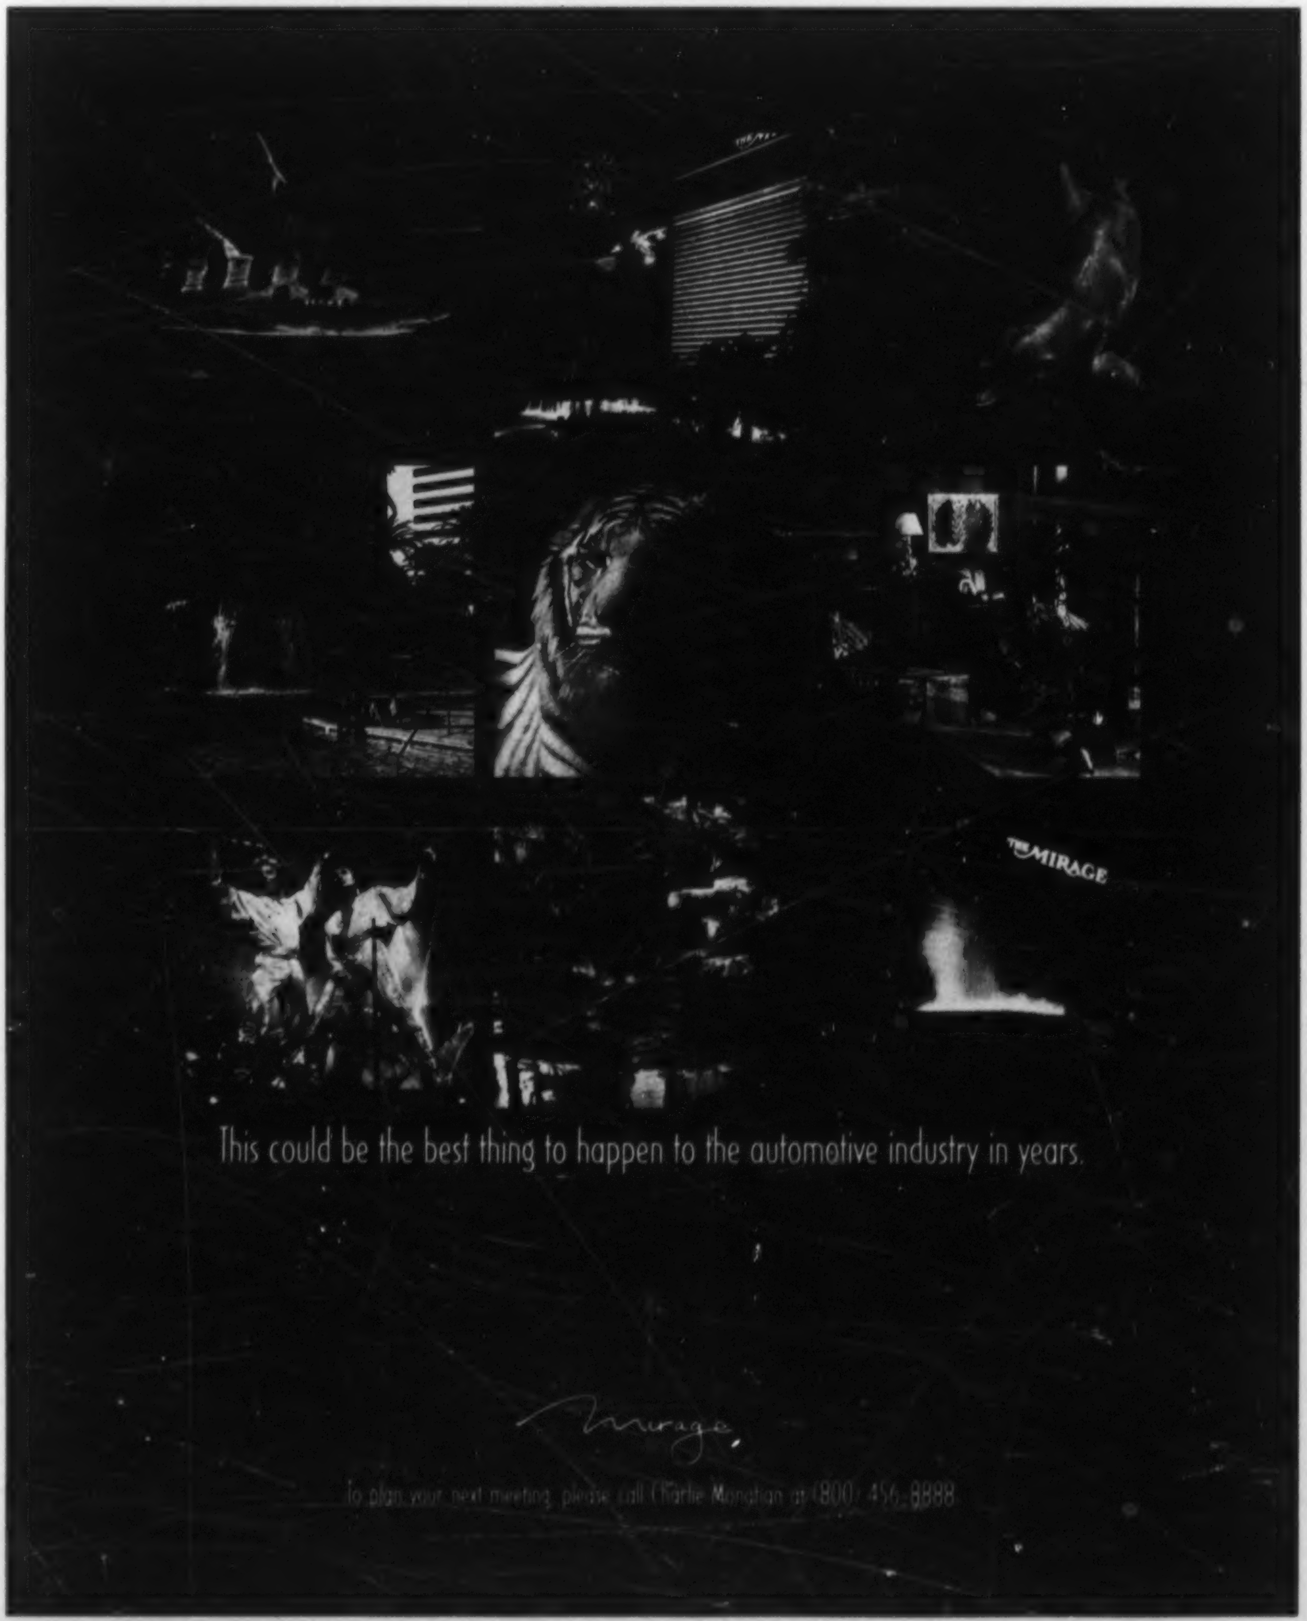
For the first time this year, Saturn does not top the sales per dealer list.

Toyota won the title when Saturn's August sales per dealer plunged 60 units below July.

Saturn sold 46.0 percent fewer vehicles in August than July due to the unavailability of the popular cars.

Toyota became the top ranking automaker, despite a drop of six units per dealer in August. Toyota's August sales slipped 9.6 percent from July.

According to *Automotive News* sales-per-dealer calculations, 15 makes reported increases in August, 18 declined and five remained unchanged. ■



This could be the best thing to happen to the automotive industry in years.

N.Y. auction is dealer group's feat

CHARLES M. THOMAS
Staff Reporter

For dealers in the Niagara Frontier Automobile Dealers Association in Buffalo, N.Y., the road to building and opening an auto auction has been bumpy and full of detours.

But after four years of perseverance, the $7.5 million Auto Dealers Exchange of Buffalo will open Sept. 22 with the help of ADESA Corp., a relatively low-profile chain of auctions based in Indianapolis.

The Buffalo dealer group is known for its innovative marketing and cost-cutting ideas. For example, the association has operated a successful automotive parts cooperative for dealers for decades.

As a result, when the association announced plans to build an auto auction in 1988, it took less than 20 minutes for members to scoop up an initial stock offering of $550,000 at $5,000 per share.

But plans began to unravel when the association purchased an option on property in Alden, N.Y., and spent a year trying to get it rezoned from agricultural to light-industrial use. More problems arose as a result of an environmental impact study.

"The location was convenient for us, but it wasn't environmentally correct," said Richard Welte, president of the Niagara dealer group.

Still, automakers like Ford Motor Co. and General Motors urged dealers to go ahead with plans to build an auction. It made sense because the auction nearest to Buffalo dealers was 200 miles to the southwest in Butler, Pa.

But it took two years before the association finally decided to abandon the Alden site. It then bought an option on 133 acres of quarry land in nearby Newstead, N.Y. The property already was zoned light industrial, so dealers had only to bring water and sewer lines to the area.

Then earlier this year, directors voted to find a partner rather than try to operate the auction themselves.

"The auction board decided to go out and find someone with some expertise in running an auction," said Welte.

Enter ADESA Corp., led by veteran auction owner Michael Hockett, who at the time owned four auctions.

ADESA was about to raise more than $57 million through a public stock offering and other financing to acquire more auctions and pay off debt. The Buffalo auction was a good match.

In March, ADESA went public and at the same time offered Buffalo dealers a stock swap, making the company a majority shareholder in the Buffalo auction and making dealers shareholders in ADESA.

"It was a very good marriage," said Welte. "ADESA helped refine the building design."

For ADESA, the partnership provides an instant customer base. There are 150 dealers in the association and 50 who owned shares in the original venture.

The association will not gain financially from the arrangement, but it does get credit for launching yet another service for its dealers: an outlet to buy and sell cars.

The six-lane auction has a reconditioning facility and paved storage for 12,500 vehicles. It also has 60 full-sized trucks to transport vehicles.

Canada sales decline 1.9%

TORONTO — Sales of cars and light trucks in Canada declined for the fifth straight month in August.

But for the first time during the tailspin, the decline was less than 10 percent. Canadians bought 95,276 cars and trucks in the period, down 1.9 percent from August 1991. A 16.0 percent gain in truck sales failed to offset a 9.1 percent decline in cars.

Chrysler, led by strong truck sales, was up 13.4 percent in August. Ford and General Motors slipped. Sales at each of the Big 3 remain behind last year's eight-month totals.

The country's leading import firms, Toyota and Honda, also lost sales. Nissan posted a scant gain.

Through August, Canada's market declined 7.9 percent, with cars off much more than trucks.

Chevy, GMC lead the pickup conversion charge

JOSEPH BOHN
Truck and RV Editor

Many pickup truck buyers want more splash and individuality in their vehicles than the Big 3 can provide.

A lot of the work for this growing market is being done at local tire and wheel shops and by marginally qualified customizers.

To legitimize the market and expand its sales and profit potential for dealers and converters, Chevrolet and GMC are launching new pickup conversion programs on 1993 models. The General Motors divisions are offering special packages on their C/K and Sierra pickups that enable converters to order conversion-ready chassis for $400 below dealer cost.

The conversion package provides a pickup without seats trimmed with either the high-line Silverado package at Chevrolet or the comparable SLE package at GMC.

Chevrolet and GMC are the only manufacturers with such a program.

Ford Division and Dodge don't offer seat delete pickups or discounts for their conversions, according to converters.

Still, some converters have been doing the companies' pickups anyway because of dealer demand.

TRAFFIC BUILDERS

Typically, there hasn't been much of a profit margin — and, therefore, incentive — for converters to work on pickups.

Converters can equip vans with packages wholesaling for $3,000 to $15,000. But with pickups, they are generally limited to packages of about $2,000, according to Kim Gerring, production manager at Tiara Motor Coach in Elkhart, Ind.

"Our program gives converters a margin to work on. It gives them a little extra financial incentive," says Jim Green, Chevrolet manager of RV and motor home sales.

"The pickup market has matured. It's no longer a trick truck market. There's a legitimate market for upfitted trucks that provide additional amenities that we don't offer," Green says.

"These trucks have become traffic builders for our dealers. In offering this upfitter package, which is only available through converters, we're trying to control who does the upfitting. We want our qualified converters doing the conversion as opposed to the local corner shop," Green says.

Mark Degnan, GMC manager of special vehicles, agrees that the pickups build showroom traffic. They also help improve the morale of salespersons who otherwise have to sell the same old trucks.

The bottom line, though, is their gross profit potential, Degnan says.

The trucks give dealers a unique product to sell. Degnan said last year dealers backed away from such niche products and focused on their core business. They've since jumped back after seeing the profit opportunities.

In the 1992 model year, Chevrolet wholesaled over 15,000 pickups with the conversion package to converters and for 1993 projects about 20,000 such units.

GMC released about 7,000 conversion-package pickups in 1992 and projects a 10,000- to 12,000-unit volume for 1993, Degnan said.

Factory sales projections may be conservative, though. Mark III Industries in Ocala, Fla., the industry's top van converter, is ordering and converting about 250 pickups a week. It projects 10,000 Chevrolet pickup conversions alone in 1993 after converting 3,200 Chevrolet and GMC pickups in the 1992 model year, according to Charley Dority, Mark III president.

Mark III has a good track record for meeting its forecasts. It converted 43,000 vans and pickups in the 1992 model year — just 2,000 short of its original target for 1993. The company now has raised its 1993 projection to 65,000 conversions.

Similarly, Tiara Motor Coach, another firm with a good track record for achieving its targets, expects to do 5,000 pickup conversions in 1993 after doing 1,200 in 1992, according to Gerring.

For the 1992 model year, Tiara originally projected 16,800 total conversions and ended up doing 17,322, Gerring said. The company anticipates converting 20,000 vehicles in the 1993 model year.

Other converters besides Mark III and Tiara doing pickup conversions include Choo-Choo Customs Inc. in Chattanooga, Tenn., plus all the Texas-based converters, such as Royal Vans of Texas in Round Rock and Kentron Inc.'s plant in Mansfield.

ROSY OUTLOOK

The pickup truck conversion market is likely to be considerably larger than GM officials project.

The only thing restraining future growth may be GM's closer scrutiny of days' supply in filling orders for 1993. As a matter of new policy, the company won't fill order requests as readily as in the past, according to a top GM sales official.

The new conversion packages and discounts on pickups can only be ordered by converters, says Green. A dealer can't order the package and have it drop-shipped to a non-authorized company.

The conversions on pickups have a very contemporary look, says GMC's Degnan.

For example, Tiara conversions typically include leather interiors, fiberglass running boards, custom wheels and tires, pin or paint stripes and even hidden radar detectors. Only a limited amount of the interior is trimmed in wood.

Tiara is studying the market to determine what additional packages to offer, Gerring said. The wide variety of body styles, configurations, powertrain combinations, and cab and bed sizes in pickups complicates such research.

There are many items the company can offer, such as fiberglass lids or covers that lock down for the bed.

Starcraft chief stresses innovation, caution

JOSEPH BOHN
Truck and RV Editor

GOSHEN, Ind. — It's a cautious Kelly Rose who pilots Starcraft Corp. these days, after rescuing it from Chapter 11 21 months ago. Still, the company's chairman is receptive to new ideas.

One is a new type of running board for Starcraft's 1993 van conversions. The running boards are tucked inside the front doors, which come down and around them to conceal them from view.

Starcraft is adopting the design for Chevrolet and GMC vans this fall and for Fords in November.

Starcraft is now a healthy fourth in industry sales, after its brush with bankruptcy in November 1990. The other Top Five van pool converters are Mark III Industries of Ocala, Fla.; Glaval Inc. of Elkhart, Ind.; Tiara Motor Coach of Elkhart; and Explorer Van Co. of Warsaw, Ind.

Starcraft is producing 67 vans a day and is selling 10,000 to 12,000 units annually. More importantly, it has exceeded all its sales and profit forecasts for the past two years, Rose says.

By November, Starcraft will pay off the last of its former creditors — three years sooner than its December 1990 court agreement called for, Rose says.

He and Stephen Kash, president of Kentron Inc. in Elkhart, each own slightly more than 40 percent of Starcraft. The balance is held by investors that include Richard Newberry, Starcraft president.

Rose says he is not interested in "chasing sales numbers" that would make Starcraft the second or third largest converter.

"In this industry, we're known as the Top Five or the Big Five. So to get into the game of who is third, second, fourth or fifth doesn't really matter anymore," he says. "We're firmly positioned and accepted in the marketplace in the upper high end.

"I don't ever want to see this company go through what it went through — the blank, empty look on people's faces, not knowing if they were going to work today or tomorrow," Rose says, describing Jan. 18, 1991, the day he took over.

The economies of scale, or synergistic benefit, of having the owner of another big conversion firm as his partner never materialized, Rose says.

"Our Elkhart and Goshen salespeople and reps out in the field don't differentiate between Kentron's U.S. conversions or anybody else," he says.

To some degree, the firms compete in different arenas. Kentron is more of a regional converter; it doesn't do much business west of the Rockies, Rose says. Starcraft is well known nationally and internationally.

About 20 percent of Starcraft's sales are international.

Rose says international sales will be increasingly important to converters in the 1990s.

He says that with the Big Five converters controlling about 80 percent of a domestic market of 150,000 to 200,000 sales annually, Europe and Asia offer the most potential for growth.

Has Your Van Conversion Supplier Passed The Barrier Test?

Glaval Has!

There is only one way to prove total compliance with the new Federal safety regulations for conversion vans: A barrier crash test. Glaval has passed with flying colors and has the certification to prove it. Exercise "due care." Contact one of the only van converters in the nation that has proven its commitment to dealer support and consumer safety.

Call 1-800-445-2825

GLAVAL® Corporation

Glaval conversions include: *Chevrolet Gladiator, GMC Auto Form, Ford Universal and Dodge Primetime.*

J.D. POWER AND ASSOCIATES

Announces a New Service for

DEALERS

What you don't know can hurt you.

Every day decisions are being made that affect your dealership's prosperity and survival. Manufacturers announce new products or programs. Key executives rise and fall. New laws are proposed that can drastically impact the way you do business.

Who can keep up with it all?

You can. With **PowerGrams**.

PowerGrams is a new service offered by J.D. Power and Associates. Every business day a 1-2 page summary of the key developments in the automotive industry is faxed to you. To gather this information, J.D. Power and Associates monitors news services from around the world, plus we use our own industry contacts to learn what's happening.

In addition to giving you the facts, **PowerGrams** will also have our commentary on this news: What it means, who it will affect, how it might impact on you. All this is delivered to your fax machine so the news will still be new when you get it.

PowerGrams. A new way to look at the world.

Want to try a complimentary subscription to PowerGrams for a few days?
Call 1-800-866-1995 and give us your name and fax number.
We'll do the rest.

August import sales dip hits sports cars hard

LINDSAY CHAPPELL

Staff Reporter

Sales of imported sports cars continued to lose ground last month.

Such cars as the Dodge Stealth, Toyota Celica and Nissan 300ZX and 240SX were down in August, as they have been throughout the year.

The trend has hurt Subaru of America Inc.'s plans to sell 10,000 SVX sports cars annually.

The company sold 2,305 SVXs through the end of August and just 3,818 since the car went on sale in August 1991.

Faced with high inventories, Subaru will delay shipments of 1993 models, and the SVX may miss the model year entirely.

Subaru was counting on the $26,250 car, with all-wheel drive and V-6 power, to give new pizzazz to its lineup. Spokesman Richard Marshall said sales have been disappointing.

"The SVX is a departure from what most people expect from Subaru, and so it's been a slow starter," Marshall said.

In August, Subaru began offering a $2,000 rebate to dealers on sales of the SVX.

Sales of all imported cars in August fell 12.8 percent from a year earlier and were off 4.3 percent for the first eight months of this year.

That compares to an overall car market that was down less than a percentage point through the first eight months of 1992. ■

VWoA

Young heads unified plan

continued from PAGE 1

tive division. The appointments suggest that Volkswagen United States Inc. and Audi of America Inc. will work more closely to contend in the U.S. market.

VWoA imports and markets VW and Audi brands in the United States. There are 692 VW dealers and 324 Audi dealers in the United States, 166 of them dualed with each other.

Shaver is the former director of consumer marketing for Saturn Corp.; and Klauss is the former vice president of corporate development for Mercedes-Benz of North America Inc.

Under the previous structure, Young retained the operations of VW U.S. when he took over his current position two years ago.

Richard Mugg, 60, who became vice president of Audi in 1988, will retire Oct. 1, after 34 years with VWoA.

Mugg spent most of the last four years trying to revive Audi. In the mid-1980s, Audi was accused of selling cars that accelerated uncontrollably, and sales fell.

Audi is showing some positive signs. The company virtually replaced its entire product line within the last year and sales are expected to improve about 30 percent next year, Young said.

In the first eight months of 1992, Audi sold 9,089 cars, 15.8 percent higher than same period last year. VW sales for January through August 1992 stood at 54,144, down 22 percent from the same period last year.

Wayne Williams, a VW-Audi dealer in Lansing, Mich., said Mugg improved the quality and image of the Audi and guided it to the brink of recovery: "Dick Mugg wanted to retire a year ago, but wanted to see the 90 and 100 launched before he retired. He leaves the job with a lot of respect from dealers."

Young said the new structure will allow him to focus less on the day-to-day operations of VW U.S. and "concentrate more on the role of president, paying more attention to the short- and long- term strategies of both divisions." He said it was Mugg's decision to take an early retirement and praised the out-going executive for having set the standard for dedication and commitment.

Maryann Keller, an auto analyst at Furman, Selz, Mager, Dietz and Birney in New York, said the independent strategies of Audi and VW at the home office in Germany may have hindered the recovery of both in the United States. For example, VW and Audi separately developed 6-cylinder engines, when it would have been to their mutual advantage to have worked on the project together, she said.

She believes the reorganization at VWoA and the selection of Ferdinand Piech as chairman of Volkswagen AG in Germany signals a closer relationship between the divisions and is an indication of the company's commitment to the U.S. market.

"Audi and VW throughout their recent past have had independent strategies," she said.

"They are at a point where they'll have to make a stand in the United States or allow the market to bid them good-bye." ■

Honda has big incentive to back new trade treaty

LINDSAY CHAPPELL

Staff Reporter

U.S. Trade Representative Carla Hills said an estimated $16 million charge against Honda Motor Co. for back import-duty payments could be dropped under the North American Free Trade Agreement.

If unsettled trade disputes with Canada aren't resolved before the pact takes effect, they will be governed under rules of the new treaty, Hills said as the Senate Finance Committee questioned her about the agreement last week.

Honda bumped heads with the U.S. Customs Service early this year over its Canadian-built Civics. Customs ruled that the cars did not contain the 50-percent North American content needed to qualify for duty-free entry under the 1989 U.S.-Canada Free Trade Agreement and levied back duties of $16 million.

Honda has disputed that finding. A final decision is still pending. But if the free-trade pact is approved by Mexico, Canada and the United States, Honda's case will be re-examined under the new rules, Hills told the committee.

The new treaty's methods for measuring North American content would allow Honda to count certain vehicle processing costs that Customs had previously excluded, such as labor content. It also does away with the so-called "roll-up" provision. That allows a part made up of 49 percent North American components to be counted as entirely imported because it falls below 50 percent.

Initial hearings on Capitol Hill indicated a brewing Democratic challenge to the accord.

The official 1,300-page text of the treaty was released last week. Automotive portions carried no surprises beyond details already released. Some carmakers are still waiting for a small U.S. printing contractor to provide them with a copy. ■

FORD PICKS SPAIN FOR ENGINE PLANT

BRENTWOOD, England — Ford of Europe said last week it will build a $1 billion plant at an existing facility in Valencia, Spain, to produce the new Sigma range of 1.0- to 1.4-liter engines for its small cars in Europe. Ford said the plant, scheduled to be fully on stream in early 1997, will have an annual capacity of 550,000 engines a year. The engines will replace the HCS family that now powers Ford's Fiesta and Escort cars. The four-cylinder, 16-valve, twin-cam Sigma was designed and developed by Yamaha Motor Co.

TOYOTA STARTS ITS ENGINES IN WALES

LONDON — Toyota Motor Corp. last week began production at its first European engine plant at Deeside, Wales. The $280 million plant is scheduled to be producing 100,000 engines a year by 1995, rising to 200,000 annually before the end of the decade. The engine, the 1.6-liter 4A-FE, will be installed in the Carina E, now in pre-production at Toyota's assembly plant in Burnaston, England.

ADP, FTC SETTLE SUIT

WASHINGTON — The FTC and Automatic Data Processing have settled charges that ADP made misleading claims to dealers about consumers saving money by financing car purchases rather than paying cash. Under the final consent agreement, the New Jersey company denies any violation of law, but can be fined $10,000 for future violations.

BIG 3 OPPOSE CANADA LABOR REFORMS

TORONTO — Canadian Big 3 officials have told a government committee that proposed reforms of the Ontario Labor Relations Act will adversely affect jobs and investment, especially in the auto parts industry. The proposals include a ban on hiring replacement workers during strikes. That would "seriously erode the ability of Ontario-based suppliers . . . to maintain scheduled deliveries to the auto industry's North American facilities," said Maureen Kempston Darkes, vice president of corporate affairs at General Motors of Canada.

MITI PEGS $4.6 MILLION FOR CNG

TOKYO — The Ministry of International Trade and Industry last week asked the government to approve $4.6 million in spending to promote the development of vehicles fueled by compressed natural gas. Although Japan has only 67 CNG vehicles on the road today and six fueling stations, MITI said it wants to see 200,000 fueling stands in the country by the year 2000.

3 MAKERS CUT PRICES IN BRITAIN

LONDON — Britain's three largest carmakers have announced major price cuts in a bid to reverse the industry's worst sales slump since before World War II. Ford Motor Co. and General Motors/Vauxhall temporarily cut prices on selected models by up to £1,000 ($2,000), while Rover Group said it has cut list prices 7 percent across the board by reducing dealer margins to 10 percent from 17 percent.

DODGE HAS INTREPID AD LINE

HIGHLAND PARK, Mich. — Dodge will use the theme "Intrepid. This changes everything" for the estimated $40 million November ad launch of the Intrepid sedan. The division will adopt the theme line "The new Dodge," industry insiders said.

N.Y. BMW DEALERS FORM AD GROUP

WOODCLIFF LAKES, N.J. — About 35 BMW dealers in the metropolitan New York area have formed their own ad association and are in the process of selecting an advertising agency, said a BMW of North America Inc. spokesman. The dealers are in charge of the association. The corporation will be an adviser to the group and provide some financial assistance. Other BMW dealers located in areas where media costs are expensive may follow suit, the spokesman said. BMW disbanded its corporate-directed dealer ad groups in 1989.

AUSTRIA

Chrysler van plant subsidy broke rules

continued from PAGE 1

33,000 in 1993. The plant, which Chrysler says is expandable to 100,000 units a year, is a cornerstone of the automaker's strategy to return to Europe in a big way this decade.

Not surprisingly, a Chrysler of Europe spokesman charged Friday that the commission was singling out the U.S. carmaker for "discriminatory" treatment.

"The aid that the Austrian government gave to Chrysler was in line with what other manufacturers got at the time of negotiations five years ago," the spokesman said. "They are trying to use our joint venture to set a broader example."

But a spokesman for the EC said Friday the commission had concluded that Chrysler knowingly set out from the beginning to circumvent the Community's ceiling on state aid by setting up in Austria.

"We have an American car manufacturer trying to come through the back door to Europe without paying duties, and that is not right," the spokesman said.

"The maximum amount of state aid allowed in EC countries is 8 percent. In this case, Chrysler went to Austria to get around that provision and is receiving 33 percent."

The spokesman said the EC intends to crack down on future violations of the state aid provision of the trade agreement.

"We will remove the preferential treatment that Austria or any other non-EC country is getting on vehicles they export into the European Community," he said. "If they break the rules, we must act."

Although several other European joint ventures also are heavily subsidized, they apparently conform to EC guidelines. Portugal, for example, has agreed to pay 20 percent of the cost of a joint-venture minivan plant for Volkswagen AG and Ford Motor Co.

But because Portugal is a designated "economically disadvantaged" area, it was eligible under EC rules to pay up to 75 percent of the plant's costs.

Some industry analysts said the Eurostar ruling has implications for exports to Europe from the U.S. plants of Japanese carmakers, all of which built their facilities with generous subsidies from states and local communities. Such exports already are subject to a 10 percent EC import duty.

"The Community is beginning to take a closer look at state subsidies," said Ian Robertson, senior editor of London's Economist Intelligence Unit. "I think you might see the commission taking a closer look at the Japanese imports coming from North America and how the law applies to that situation."

But Robertson and others said they expect a negotiated settlement before the Sept. 30 deadline.

Somewhat ironically, the Chrysler case promises to be the only time that duties are seriously threatened under the 1972 free-trade agreement.

The agreement will be replaced on Jan. 1 by the European Economic Area, which creates a free trade zone between the European Community and the European Free Trade Association.

It was unclear last week whether any penalties that may be imposed on Chrysler would be dropped or renegotiated after the new accord takes effect.

Sales slump hikes supply to 64 days

KAREN DETKOWSKI

Statistician

U.S. car and light-truck inventories on Sept. 1 remained in line with month-earlier levels, but a sales downturn in August increased days' supply.

The supply of unsold light vehicles rose to 64 days on Sept. 1 from 62 on Aug. 1.

"If sales do not develop over the next few months, manufacturers may be forced to cut production or be faced with high inventories," said George Magliano, industry analyst for WEFA Inc.

The stockpile of domestic cars grew to 60 days from 51 on Aug. 1. But imported cars declined to 70 days from 82.

A nine-day strike at a Lordstown, Ohio, parts plant, which began Aug. 27, halted output at 10 General Motors plants, including Saturn. But the strike had little effect on GM inventories for August. GM's supply rose to 65 days up from 61 as August began.

Ford Motor Co.'s inventories were 64 days vs. 63 on Aug. 1. Ford's car average rose, but its truck supply slipped to 59 days from 66.

Chrysler Corp. had the largest increase of the Big 3, both in units and in days' supply. It had a 77-day supply of new cars and trucks on Sept. 1, up from 68 on Aug. 1. The breakout was 71 days for trucks and 79 days for domestic cars.

For the industry, the supply of light trucks was 66 days compared to 68 on Aug. 1. The domestic supply was 65 days; imports, 71.

More '93s wear rebate regalia

ARLENA SAWYERS
Staff Reporter

Toyota Motor Sales U.S.A. Inc., Ford Motor Co. and Pontiac announced incentive programs last week that include a wide selection of 1993 vehicles.

On the leasing side, Saab Cars USA Inc. extended its special retail lease plan.

Toyota's program includes 1992 cars and 1992 and 1993 compact pickups.

The incentives range from $100 to $500 on Tercels and $400 to $800 on Corollas and Celicas. Payments run from $300 to $1,200 on 1992 pickups and from $100 to $1,000 on 1993 pickups.

The amount of the rebate varies by model and is based on a dealership's performance against its factory-set quota.

Toyota's incentive program expires Nov. 3.

Ford sweetened consumer rebates on the 1992 Ford Crown Victoria and Mercury Grand Marquis.

The rebates, which were $500 and $750, respectively, are now $2,000 for both cars through Oct. 31.

Rebates on other 1992 and 1991 models are unchanged; they expire Sept. 23.

Also, Ford added nearly all its 1993 car lines to its rebate program.

The incentives range from $200 to $1,000 on 1993 cars and include every line except Ford Thunderbird and Probe, Mercury Cougar and Lincoln Mark VIII (which won't be introduced until Dec. 26).

As in the case of rebates on Ford's 1992 and 1991 models, some of the payments on the 1993s vary by regions.

Rebates on 1993 Ford trucks range up to $1,000. The rebates on the 1993 cars and trucks expire Dec. 18.

Pontiac is paying $500 retail rebates on the 1993 Grand Am, Grand Prix, Bonneville and Trans Sport through Jan. 24.

Saab has extended its special retail finance rates until the end of September.

A Saab 9000 or 900 may be leased for 25 percent down and zero percent finance rate for 48 months.

The zero percent financing is also available for 24 and 36 months.

WATCH

INCENTIVE WATCH— DEALER INCENTIVES

NEW PROGRAMS	
TOYOTA (expires Nov. 3; all rebates are based on dealer's performance against quota)	
Tercel (1992)	$100-500
Celica, Corolla (1992)	$400-800
Compact pickups:	
Base 1992	$800-1,200
Other 1992	$300-700
Base 1993	$600-1,000
Other 1993	$100-500
CONTINUING PROGRAMS	
ACURA (1992 models; expires Nov. 3)	
Legend sedan	$2,500
Legend coupe	$1,000
AUDI (1991 models, no expiration date)	
Audi 100 and 200	$1,500
Audi 90	$1,000
Rebates apply to models purchased by dealer from Audi of America port stocks.	
BMW (no expiration date)	
750iL (1991)	$10,000
CADILLAC (1992 models, expires Sept. 23)	
Eldorado, Seville (except STS)	$0-1,500, based on number sold
CHEVROLET (1992 models, expires Sept. 23)	
Corvette ZR-1	$2,000
Other Corvette	$1,000
G van conversion	$1,000
FORD (1992 models; expires Sept. 23)	
Taurus SHO (demos)	$2,000
Econoline van conversion	$750
GMC (1992 models; expires Sept. 23)	
G van conversion	$750-1,000, quota
HONDA (1992 models; expires Sept. 30)	
Accord	$500
Civic	$400
ISUZU (expires Sept. 30)	
Impluse (1991)	$2,500
Impulse (1992)	$1,500
Stylus (1991 Calif.)	$800-2,000
Stylus (1991)	$800-1,100
Stylus (1992)	$500
*Pickup (1991-'92)	$800-1,600
*Rodeo (1991-'92)	$400-1,400
*Dealer can choose flat payment or one based on number sold.	
Dealer has the option to sharing rebate with buyer.	
LOTUS (1991, no expiration date)	
Elan	$5,000
Esprit Turbo	$11,000-15,000
MITSUBISHI (1992 models; expires Sept. 30)	
Expo/Eclipse (combined)	0-$1,200, based on number sold
Galant or pickup (dealer's choice)	0-$1,200, based on number sold
NISSAN (1992 models; expires Sept. 30)	
Maxima SE	$250
Sentra 2-dr.	$800
Other Sentra	$950
Maxima GXE	$1,000
240SX (except conv.)	$1,000
Stanza	$2,000
Pickup	$1,750

Honda exits Formula One racing

RICHARD JOHNSON
Staff Reporter

TOKYO — In another sign of the Japanese auto industry's weakened financial condition, Honda Motor Co. last week said it will withdraw from Formula One racing after this season.

"It is necessary now to go back to our roots . . . and re-consider the direction of Honda's future activities," said President Nobuhiko Kawamoto, a longtime advocate and former supervisor of Honda's motorsports activities.

The move was expected. Honda, which supplies the McLaren team's 3.5-liter V-12 engine, said in July it was considering withdrawal from the racing series. It had previously said the 100 engineers assigned to Formula One racing would be better used in advancing technologies to preserve the environment.

However, Honda appeared to slightly de-emphasize emissions technology. Kawamoto said environmental research would be only one area in which engineering talents will be redeployed. There has been talk Honda may switch to IndyCar racing in the United States, its biggest market.

Honda returned to Formula One racing in 1983 after a 14-year hiatus. Kawamoto orchestrated the return and served as the Japan-based racing "project leader" at that time in his post as head of Honda R&D Co. Since then, Honda has claimed 67 Grand Prix victories and won the Constructor's Championship six times. This season, the Honda-powered McLaren team has won three of 12 races.

Honda has never disclosed the cost of its Formula One activities, which are credited with several innovations — notably the development of its variable valve-timing VTEC engine technology. The most common outside estimate is $80 million a year, although Tanaka said the sum is much less. ■

All plants return at GM

GWENDOLYN ZONGHETTI
Special Correspondent

With General Motors' Baltimore plant scheduled to return to work today, all 10 plants closed by the nine-day strike in Lordstown, Ohio, are back at work.

No plans have been made to compensate for the lost production of 26,090 vehicles.

In the United States last week, 99,817 autos were assembled, up 6.7 percent from the prior week but 13.7 percent below the year-ago week.

Year-to-date car production in the United States is 3,944,663, up 5.0 percent from the same week in 1991.

U.S. truckmakers produced an estimated 66,149 units last week, dropping 12.4 percent from the prior week and 16.9 percent from the 1991 week.

So far this year, 2,800,156 trucks have been assembled in the United States, up 20.3 percent from the same point last year.

In Canada last week, 20,090 cars were produced, 1.1 percent above the prior week, but 21.2 percent below the year-ago week.

Year-to-date Canadian car production is 718,651, a 5.1 percent decrease from 1991.

Canadian truckmakers assembled 16,353 units, up 10.8 percent over the prior week but down 12.7 percent from the year-ago week.

Year-to-date truck production in Canada is 670,493, up 18.3 percent over the 1991 period.

Last week, scheduled car and truck production was shared as follows:

GM, 38.9 percent; Ford Motor Co., 29.4 percent; Chrysler Corp., 14.3 percent; Honda of America Manufacturing Inc., 4.3 percent; Nissan Motor Manufacturing Corp. U.S.A., 3.5 percent; Toyota Motor Manufacturing (U.S.A.), 2.3 percent; AutoAlliance International Inc., 1.6 percent; Diamond-Star Motors Corp., 1.3 percent; Subaru-Isuzu Automotive Inc., 1.3 percent; New United Motor Manufacturing Inc., 1.3 percent; miscellaneous, 0.9 percent; Navistar International Corp., 0.8 percent; AM General, 0.1 percent.

GM scheduled daily overtime last week at the Moraine, Ohio, and Janesville, Wis., truck plants. The Scarborough, Ontario, truck plant worked one shift of weekend overtime.

Ford slated daily overtime last week at two car plants and three truck plants.

The car plants were Atlanta and Chicago. The truck plants were Louisville, Ky.; Kansas City, Mo.; and St. Louis.

This week, Chrysler has scheduled overtime at four plants.

The Jefferson North (Detroit), and Warren, Mich., truck plants will work daily overtime. The St. Louis truck plant and the New Mack (Detroit) car plant will work daily and weekend overtime. ■

Olds' ad agency on the ropes

Rock: Dealers say Burnett is the No. 1 problem

RAYMOND SERAFIN
Crain News Service

In a move that will send shock waves throughout the automotive and agency world, Oldsmobile is putting its $140 million account — now at Leo Burnett USA — into review.

If Burnett loses the account, it would be the first time since 1958 that General Motors has dismissed an agency, reports *Advertising Age*, a sister publication to *Automotive News*. Burnett and its predecessor have had the Oldsmobile account since 1934.

Pressured by unhappy dealers, Oldsmobile's new general manager John Rock and general marketing manager Knox Ramsey decided to review the advertising contract, or open it to competition.

Burnett will be included in the review.

"Dealers have a lengthy list of concerns, and the agency is at the top of the list," Rock said. "We can't say that we want more of a partnership with dealers, and then tell them that the status of the agency is off-limits."

Rock to dealers: Sell Bravada or lose it > 33

Rock: Olds should be like Saturn

Oldsmobile's sales have plummeted from over 1 million cars in 1986 to a projected 406,000 vehicles in the 1992 model year, which ends Sept. 30. Some critics have suggested that GM should drop the brand, but company executives have pledged to keep the division operating.

"We're looking at every aspect of our business, and as part of that we decided to go through an agency review process," Ramsey said.

We have a very high regard for Leo Burnett," added Ramsey, who said Oldsmobile has informed Burnett but hasn't yet contacted other

Chrysler consolidates agency media buyers

JOSEPH BOHN
Staff Reporter

AUBURN HILLS, Mich. — Chrysler Corp. plans to streamline the media-buying activities of its three advertising agencies into a single group.

At stake is an estimated $400 million to $500 million in direct expenditures, according to John Damoose, Chrysler vice president of marketing.

"We've spent three hard years changing the culture of this company: cost-cutting, streamlining, process redesigning. The results are absolutely bubbling up. Now, we have to do it with the agencies," Damoose said.

GM hastens plan to cut jobs

DETROIT — General Motors is accelerating its drive to trim white collar employment, Chairman Robert Stempel told employees Friday.

While the goal remains at 20,000, GM now plans to finish the cuts by the end of 1993 rather than during 1994. GM already has reached its goal of 9,000 job cuts this year.

No change was announced in blue collar cuts.

— Phil Frame

Honda prices up $482 for '93

American Honda Motor Co. Inc. last week raised prices an average of $482, or 2.7 percent, on its 1993 Honda Division cars.

Earlier, the company had posted an average hike of

Prechter and Eaton to open 1993 World Congress

DETROIT — Chrysler Corp.'s Robert Eaton will address the 17th Automotive News World Congress just 10 days after assuming the chairmanship from Lee Iacocca.

Heinz Prechter, chairman of ASC Inc. in Southgate, Mich., also will address the Jan. 10 opening session of the congress at the Westin Hotel in Detroit.

Besides Eaton and Prechter, 25 other automotive industry executives will speak during the four-day congress, which is held in conjunction with the North American International Auto Show. The 1993 Automotive News World Congress is co-sponsored by *Automotive News* and the University of Michigan Transportation Research Institute.

Keynote speaker Eaton began his automotive career at General Motors in 1963. He had risen to president of General Motors

Japanese trucks fall in U.S.

Sales drop in all segments as domestic deliveries soar

KRISTINE STIVEN BREESE
Staff Reporter

LOS ANGELES — Politics, prices and competitive pressures are dragging the Japanese share of light-truck sales to an eight-year low.

Through August, sales of Japanese-badged minivans, sport-utilities and pickups had fallen 10.4 percent from 1991. Meanwhile, sales of Big 3 light trucks soared 15.4 percent, boosting the total light-truck market in the United States by 302,000 units.

The combination of lower sales and a bigger market has cost the Japanese 3.3 points of truck share in the January-August period. Their current share of 14.0 percent is more than six points below their peak in 1986. Since 1984, Japanese light truck share had not been below 14.4 percent.

Combined with other trends, the decline is a sign of tougher times for Japanese truck sales in the United States.

Trucks have remained a Big 3 stronghold, in part because imported pickups and two-door sport-utilities carry a 25 percent tariff. Congress is thinking about slapping the same tariff on imported minivans and four-door sport-utilities. And the Big 3, through its appeal of an International Trade Commission decision, want Mazda and Toyota to pay higher tariffs on minivans.

In addition, financial pressures on Japanese manufacturers mean they'll be less able to pursue every segment aggressively. The truck segments have been heavily influenced by a "Buy American" mentality for years, especially in the Midwest. Japanese marketing dollars will likely be spent on cars, although the good margins in some truck segments continue to appeal to the Japanese.

One such segment is larger pickups. In November, Toyota will introduce its new big pickup with hopes of selling 60,000 a year. It is expected to

Subaru to dump tiny Justy in 1994

It's latest casualty in a fading market

JIM HENRY
Staff Reporter

NEW YORK — Subaru of America Inc. plans to pull the plug on its Justy econocar in 1994, creating another casualty in a disappearing market.

Low gasoline prices and bigger baby-boomer families have shaved demand for cars at the very bottom of the price spectrum. As a group, the Justy and seven other cars available this year at base prices below $7,000 are selling at less than half their 1988 rate. And since Asian imports have dominated the segment, they are now hurting the most.

"There's no way (an import) can compete . . . and the more imported content you have, the worse it gets," said Robert A. Lutz, president of Chrysler Corp.

Lutz said the trend gives U.S. makers a chance to get back into the entry-level market. But for him, "entry-level" will mean a higher level of content, quality and price than the present offerings at the bottom.

He suggests that days are numbered for cars under $10,000.

And with good reason.

Two players with 1992 entries under $7,000, Daihatsu America Inc. and Yugo America Inc., have dropped out of the U.S. market this year. Annual sales of the Hyundai Excel have plunged by nearly 200,000 since 1988. Volume on the Korean-built Ford Festiva has dropped by more than a third.

Ford gives European Escort a new look

Eighteen months after it was launched to generally scathing reviews, the European Ford Escort has been given a face lift and some structural upgrades. Changes include a new grille and bumpers, larger windows and more prominent headlamps and taillight clusters. Although it remains Britain's best-selling car, the new Escort has lost two points of European market share.

$582, or 2.5 percent on its Acura lineup.

The 1993 Honda Civic starts at $8,400, an increase of $300 over the 1992 model. The base Accord two-door is $13,750, up $450, and the Prelude is priced from $17,000, up $450.

A new model for 1993 is the Accord Special Edition sedan, which carries a sticker of $21,750.

Also pricing its 1993 cars last week was Hyundai Motor America, which announced an increase of 2 percent.

Hyundai's price leader, the Excel three-door hatchback, is $6,799, a boost of $204.

GM shares co-pay details

DETROIT — General Motors' white collar employees and retirees have learned details of the health care coverage they will be contributing toward for the first time.

Employees will have four coverage options, and the right to elect no coverage, beginning Jan. 1.

Plans range from no monthly premium but deductibles as high as $1,800 and co-payment provisions, to premiums as high as $148 a month and minimal deductibles and co-pays.

Retirees have the same choices, with some provisions delayed until 1994.

— Phil Frame

Californians get deal on Villager

DETROIT — Officials at Lincoln-Mercury Division believe the majority of its new Mercury Villager minivan sales will be leases, and officials are trying a sweeter deal than competitors in California.

Through December, California consumers will get free scheduled maintenance with two-year leases. The offer is good only in California, says Donald Huffman, L-M marketing plans manager, and the division has no plans to take the test nationwide.

Saab's name on credit card

Saab Cars USA Inc. last week joined the ranks of automakers that are linking themselves to credit cards.

The Saab Visa card is an affinity credit card, meaning that Saab will not directly issue the card and will not own the receivables, nor earn the interest income. The card is being issued by MBNA Bank of Delaware.

The card is being offered exclusively to Saab owners in a telemarketing program that started last week and a direct mail campaign slated for October, said spokeswoman Elke Martin.

The card is being offered in "silver" and more prestigious "gold" versions with a credit limit of up to $50,000.

It has no annual fee the first year and a "no fee" option thereafter if the cardholder charges a specified amount.

— Arlena Sawyers

Import post for Hutchinson

WASHINGTON — Philip Hutchinson, 54, has been named president of the Association of International Automobile Manufacturers. He will take over Sept. 30 when George Nield retires.

Hutchinson retired June 1 as vice president of public affairs, general counsel and secretary of Volkswagen of America Inc.

— Helen Kahn

3 reporters get new assignments

Three veteran *Automotive News* reporters have been given new assignments:

■ Arlena Sawyers will cover dealers, a new beat. She will write about malls, family succession, General Motors' Program 2000, new franchises, one-price selling, bankruptcies, customer satisfaction and other issues that directly affect new-car dealers. Charles M. Thomas will continue to cover the National Automobile Dealers Association, auctions, computers and service contracts.

Sawyers: dealers

Sawyers joined *Automotive News* in 1989, after 12 years at the *Detroit News.*

■ Mary Connelly will take over the marketing beat from Sawyers. She will cover automakers and their agencies, keeping readers abreast of advertising and marketing news.

Connelly: marketing

Bohn: Chrysler

Connelly has written for *Automotive News* since 1985. She has covered labor and, most recently, Chrysler Corp. She has been a journalist for 20 years.

■ Joseph Bohn will take over the Chrysler beat, writing about news from the boardroom to the showroom. In addition, he will continue as truck editor.

Bohn, a journalist for 24 years, joined *Automotive News* in 1970. His beats have included labor, marketing and engineering. ■

briefly

Rodney, move over

Americans scoff at Congress as a group but keep re-electing its members. And that's the way Congress views car dealers, says James Lust, next year's president of the National Automobile Dealers Association. "Legislators say and do pretty much what they want to us, because the retail auto industry is held in such low public esteem they don't have to worry about defending it," said Lust, who pressed the flesh with lawmakers during an NADA conference last week. "But even if Congress doesn't respect us as an industry, they do respect us as individuals."

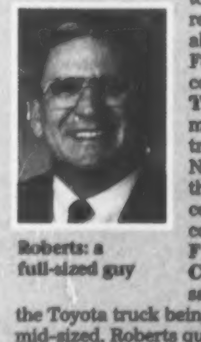
SIGN OF TIMES — **General Motors'** purchasing czar Inaki Lopez will move his watch from his right wrist to his left when the company makes record profits, but **Oldsmobile** General Manager John Rock is watching for another sign. Spotting Oklahoma City Olds dealer Ed Eskridge in the crowd at the division's 1993 preview, Rock said, "When Ed Eskridge puts his **Honda** dual up for sale, I know things are OK with Olds again."

YOUTH MOVEMENT — To better target young adults, **Ford Motor Co.** has named 14 college students to the Ford National Youth Council. The students will meet with Ford three or four times a year, test vehicles and attend marketing programs. Member Earl Lucas, 22, an automotive design student at the Center for Creative Studies in Detroit, says Ford's benchmark should be **Mazda.** Lucas says Mazda cars don't "look like something your mother or father had."

WAVE OF THE FUTURE — The world's first electric car pool was scheduled to start operation this week. John Dunning, a manager at **General Motors'** Delco-Remy subsidiary working on the electric vehicle team, and Hank Wedaa, chairman of California's South Coast Air Quality Management District, learned that they live fairly close to each other in Orange County, and Dunning's 35-mile route to work takes him past Weida's office. Dunning's battery-testing **Geo** Storm had room for one more, so a car pool was born.

IF YOU CAN'T LICK 'EM — **Chrysler Corp.** President Robert Lutz says his firm's close ties with suppliers are "as close as you're ever going to get in the United States to a *keiretsu.*" Lutz later bet his "entire annual compensation" that Chrysler's cooperative approach will work better than the supplier crackdown at **GM.** "The fear and intimidation approach just doesn't work," Lutz told the International Motor Press Association in New York. "I know — we tried it for years."

TOYOTA IS THE COPYCAT — **Ford Division** General Manager Ross Roberts took exception to a reporter's question about what product Ford would use to compete against **Toyota's** new mid-sized pickup truck, due to debut in November. "I think the Toyota truck is coming out to compete against our **F** series and the **Chevy** C/K," Roberts said. And referring to the Toyota truck being characterized as mid-sized, Roberts quipped: "I don't know about this mid-sized stuff. It's about as mid-sized as I am."



Roberts: a full-sized guy

Dealer sues over use of computer data

CHARLES M. THOMAS
Staff Reporter

Now that most dealerships are computerized from the showroom floor to the service department, questions are being raised over the value and ownership of consumer data collected by computer systems.

In an obscure lawsuit in Oregon, a Nissan dealer has sued computer vendor Automatic Data Processing Inc. of Hoffman Estates, Ill., alleging the company dipped into the dealership's data files after hours, lifted vehicle prices and then sold them.

Although the contract between Hutchins Imported Motors Inc. of Springfield, Ore., and ADP may have authorized the computer firm to collect the data, the dealership charges in its lawsuit that ADP had no right to gather the data. The suit was filed in Lane County Circuit Court.

"We are looking into the whole issue of dealer information and who owns it," said Jake Kelderman, National Automobile Dealers Association executive director of industry affairs.

Dealership computers contain a wealth of information on such topics as consumer credit, wholesale and retail prices, warranties, parts and service.

> ❛ Our position is that any data in a dealership belongs to the dealer and he should guard it. Nobody has a right to it except the dealers. ❜
>
> **JAKE KELDERMAN**
> NADA EXECUTIVE

Kelderman said that until recently, dealership computer systems have not been easy to access. But technology advances have made it easier for computer vendors to tap into dealer systems.

"Our position is that any data in a dealership belongs to the dealer and he should guard it," said Kelderman. "Nobody has a right to it except the dealer."

ADP declined an *Automotive News* request to discuss the issue. But the lawsuit says ADP's contract contains a clause authorizing it to extract data from dealerships.

It gives ADP "non-exclusive, royalty-free license to use and distribute the client data to third parties in statistical and/or compilation in forms in connection with ADP products and services."

It does not guarantee that the name of the dealership from which the information is extracted will be kept confidential.

That's how William Hutchins, owner of the Oregon dealership, discovered that ADP had lifted price information from his data base.

"An insurance adjuster called and asked about a car at my dealership that showed up on his price sheet," said Hutchins. "I asked him how the price information and my name got on his sheet, and he told me that the insurer buys the information."

Hutchins claims ADP has taken price information from the dealership since 1989 without his knowledge. He says ADP told him the company obtains the data on weekends and after hours so as not to disrupt business.

Hutchins claims he never gave ADP permission to dip into his dealership's computer files.

He has owned an ADP system since 1983. Three years ago, he leased a new system for $70,000 from ADP. Hutchins claims that ADP assured him dealership information would remain confidential and that he was unaware of the clause in the lease.

Hutchins spent $100,000 to replace the ADP computer and software. He is seeking $27 million in punitive damages and $174,000 in other damages, which would pay off both his lease from ADP and his new computer equipment.

The lawsuit says ADP violated the Uniform Trade Secrets Act.

ADP is a leading computer vendor that sells to thousands of new-car dealers in the United States.

Although most computer vendors have almost unlimited ability to rove around dealer files, theymaintain they don't abuse the privilege.

They say that when they enter computer systems, they are upgrading programs and performing other routine maintenance functions without the knowledge of the dealer. It is part of the service customers receive when they purchase a computer from a vendor.

Typically, computer vendors use special, dedicated telephone lines and computer

Same story: Trucks pull sales ahead

JIM HENRY
Staff Reporter

Trucks again outpaced the average gain for the industry in a strong early-September sales period.

Light-vehicle sales totaled 282,841, an increase of 9.0 percent on a daily-sales-rate basis. That topped 1992's overall pace; year-to-date volume was up 3.4 percent after eight months.

The early-September period included the Labor Day holiday and had eight selling days, compared to seven in 1991. Year-to-year percentage comparisons in this article are based on the daily selling rate.

As has been the case all year, cars again inched ahead while trucks took giant strides. Car sales rose 2.4 percent above the year-ago period; trucks jumped 20.8 percent. Trucks accounted for about 40 percent of the total volume.

Toyota and Pontiac provided exceptions to the trend. Toyota Motor Sales U.S.A. Inc. reported that its car sales volume more than doubled in early September.

Corolla sales shot up 77.5 percent to 3,965. About 40 percent of those were an all-new model introduced Sept. 4.

Pontiac's car sales rose 16.0 percent (daily rate), and the Grand Am more than tripled its year-ago total.

Overall, GM sales were up 2.4 percent in early September on a daily-rate basis.

At rival Ford Motor Co., Ford trucks outsold Chevrolet trucks by nearly 3,800 units.

Overall, Ford Motor Co. posted a 16.9 percent improvement.

Chrysler Corp. was up 20.9 percent. Helped by the extra day, Chrysler nearly doubled its light-truck volume, including Jeeps and minivans. Chrysler had a record month for minivans in August.

Automotive News estimates 10-day sales for Chrysler and for most imports.

American Honda Motor Co. Inc. slid 3.1 percent in early September, and Nissan Motor Corp. in U.S.A. fell 16.3 percent.

10-day sales table ➤ 29

Paris star

Renault will introduce the Twingo at the Paris auto show next month. The 135-inch long car will be marketed with just one equipment level and a price of about $10,600. A canvas-covered roof opening and air conditioning will be the only options. Power comes from a 55-horsepower 1.2-liter engine.

Ford realigns senior executives

KATHY JACKSON
Staff Reporter

Personnel changes at Ford Motor Co. last week give a further glimpse of how the company may operate after the retirements of Chairman Harold Poling and President Philip Benton.

Company sources say Benton will retire by the end of the year, and Poling has said he will leave next year.

Last week, veteran Executive Vice President Louis Ross, 60, moved from head of International Automotive Operations to the new post of executive vice president and chief technical officer.

W. Wayne Booker, 58, a Ford vice president who headed Asia Pacific Operations, succeeded Ross as executive vice president for International Automotive Operations. Robert Sparvero, 52, general manager of North American export sales, succeeded Booker and was elected a corporate vice president.

Booker's promotion appears to represent the biggest jump in rank and responsibility.

But Ross' job change diminishes some of the responsibilities of the Ford Automotive Group, headed by Allan Gilmour, who has been groomed for several years to succeed either Poling or Benton.

As chief technical officer, Ross will oversee the departments of technical affairs and automotive components. He also will supervise the launch of Ford's new CDW27 program, the joint manufacture and sale of replacements for the Tempo/Topaz in North America and the Sierra in Europe.

Ross: chief technical officer

Booker: new executive vp

Sparvero: heads Asia group

Technical affairs is headed by John McTague, a Ford vice president. It includes Ford's environmental and safety staff; its Alpha division, which looks at futuristic concepts; and the design staff. Technical affairs used to report to Gilmour.

The $6 billion Tempo/Topaz program was supervised by Ross and Alex Trotman, North American Automotive Operations boss. Both reported to Gilmour.

Now, Ross will oversee the development and launch. The Sierra will debut in Europe for the 1994 model year, and the Tempo/Topaz will bow in the United States the following year. Ross will report to Benton.

Ford spokesman Al Chambers said Ross' new job was created to emphasize and coordinate the various technical areas.

"He (Ross), in effect, has been the technical spokesperson to the board for some time," Chambers said. "He will look at the technicals of programs, not the business and marketing."

Some Ford insiders wouldn't be surprised to see the Ford Automotive Group phased out when the new management team is put in place. Under that scenario, executives who now report to the head of the group would report directly to the president of Ford Motor Co.

Trotman and Gilmour are favored to replace Poling and Benton. But also waiting in the wings is Ken Whipple, 57, president of the Ford Financial Services Group since March 1988.

Whipple heads Ford's most profitable operation and was chairman of Ford of Europe from 1986 to 1988.

The Ford Automotive Group was established in 1987 to coordinate the domestic and overseas automotive operations. Benton was the first president of the group, and Gilmour was named to the post in 1989.

Dealers eke out more profits

MAX GATES
Staff Reporter

WASHINGTON — Sales continued to drag, but dealers made more money in the first half of 1992.

Dealers' before-tax profits averaged 1.7 percent in the January-to-June period, according to the National Automobile Dealers Association. That compares with barely 1.0 percent for each of the past three years, said Jake Kelderman, NADA's executive director of industry affairs.

Only 10 percent of NADA members lost money during the first half of the year. Last year, 20 to 25 percent of dealers lost money, Kelderman said in a report to the association's annual Washington conference and lobbying session last week.

Most of the upturn in profits came from tighter operations. Sales, especially new-car sales, remained stagnant. The average dealer hasn't made money on new-vehicle sales in five years, Kelderman said.

NADA Chief Economist Thomas Webb lowered his estimate of total car and light-truck sales this year to about 12.9 million. Webb earlier had predicted 13.2 million sales.

But Webb said he doesn't foresee a third downslide in this recession, a so-called triple dip. "We will have growth, but it will be painfully slow," he said.

Despite the mixed financial news, the estimated 400 representatives of state and local dealer associations were in a generally upbeat mood.

The conference culminated Tuesday afternoon when dealer representatives went to Capitol Hill. At the top of their wish lists was a bill to prohibit mandatory binding arbitration in franchise agreements with automakers.

The dealers also pushed for repeal of the luxury tax on high-line cars and defeat of protectionist trade legislation aimed at Japanese-badged cars.

Dealers were also looking for protection from auto parts labeling laws currently getting a lot of attention in Congress. Those laws could contain requirements for labeling and certifying used parts that could create a paperwork nightmare for dealers.

Orders in Class 8 augur strong '93

JOSEPH BOHN
Truck Editor

The heavy-truck market is swinging into high gear with sharp increases in retail sales and net new orders that set the stage for a strong 1993.

Net new orders for Class 8s more than doubled in July to total 16,795 units, up from 7,020 a year ago, according Rothschild Inc., a New York investment firm. For August, the firm estimated net heavy-truck orders at 14,000 units, a big gain over 7,776 a year earlier.

Normally, deliveries are scheduled for two to three months after orders are placed.

But now, fleets are spreading deliveries over the next 12 months, said Jim Hebe, Freightliner Corp. president.

Freightliner, Kenworth Truck Co. and Navistar International Corp. appear to be garnering the bulk of the orders, according to industry sources.

Frank Prezelski, an analyst with Rothschild, said the big increase in orders represents an attempt by fleets to lock into what are considered bargain prices.

The industry has been slashing prices for the past two years because of the recession.

"It reflects the trucking companies' anticipation of a much better 1993 and sets the stage for strong retail sales by manufacturers," Prezelski said.

Actually, truck company operators haven't been doing too badly this year. The tonnage of freight hauled has been rising steadily for 18 months.

August's order increase was particularly encouraging because a falloff had been anticipated following exceptionally strong orders in July.

The sustained increase in demand is now approaching a point at which manufacturers will have to increase production, Prezelski said.

Separately, the Motor Vehicle Manufacturers Association said Class 8 retail sales in August totaled 10,121 units, up 34.9 percent from the year-ago month.

Retail sales for the first eight months of 1992 totaled 74,289, up 16.4 percent from a year ago.

Medium-duty sales also are up over last year, though the recovery hasn't been as strong as for Class 8s.

Class 4-7 sales totaled 10,364 in August, up from 10,026 in August 1991.

For the first eight months of this year, medium-duty sales were 87,021, slightly ahead of the86,884 vehicles sold in the year-ago period.

While the strength of the medium-duty market earlier had been concentrated in the heavier end, it has now swung over to Classes 4 and 5, which are lately showing the biggest gains.

Ryder awards body contracts for '93s

JOSEPH BOHN
Truck Editor

Several major body-equipment companies won bids to equip Ryder Systems Inc.'s 1993 model chassis.

Utilimaster Motor Corp. of Wakarusa, Ind.; Grumman Corp. of Bethpage, N.Y.; and Morgan Trailer Manufacturing Co. of Morgantown, Pa., reportedly received orders for 1,800 to 2,000 vehicles each.

Supreme Corp. in Goshen, Ind., received a contract for about 1,100 units. In confirming his company's figure, Christy Miller, Supreme's vice president of manufacturing, noted it was twice the size of last year's.

The converters are expected to finish equipping Ryder's 1993-model chassis by May — just in time for the peak summer moving season.

This year's big trend is for people to leave California, said James Mellott, Supreme vice president of sales and marketing. So rental companies want a lot of their vehicles built there, he said.

Supreme is close to receiving another big order for a completely new, all-fiberglass body it created for Tru Green Corp. of Memphis, Tenn., according to Mellott.

Tru Green acquired Chem Lawn Inc. of Columbus, Ohio, and wants to strike a more environmentally harmonious image with modern-looking, low profile vehicles that also have the ability to handle chemicals, fertilizers and fungicides.

Tru Green calls the new body design the Rhino. ■

NATIONAL AUTO AUCTION ASSOCIATION

AUTO AUCTIONS MARKET FACILITIES AND NEW SERVICES TO DEALERS

For years, the Dallas Auto Auction conducted auctions in a building that had once been a food warehouse.

The enormous increase in the volume of vehicles sold at the auction during the 1980s forced the auction's owner, Anglo American Auto Auctions, Nashville, to construct a new facility on a nearby 100-acre site.

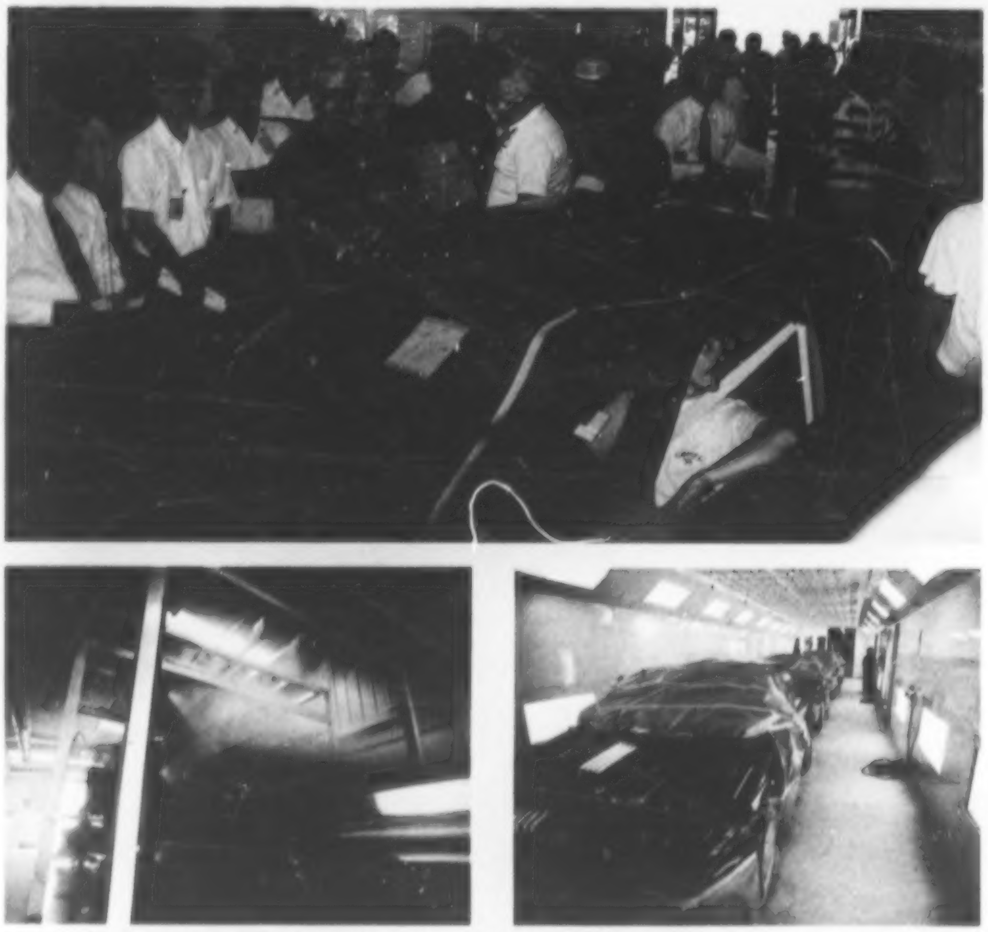
The new facility contains features unthinkable in the old building.

A state-of-the-art air exchange system draws emissions away from dealers attending the auctions. An automated body shop, a computerized paint shop and a $100,000 car cleaning system rivals that of any new-car dealership.

The sophisticated computer stores pictures of dealers who register for the auction, tracks their buying patterns as well as vehicles bought and sold. A silent paging system uses television monitors located around the auction to page people or provide information by remote.

The modernization of the Dallas Auto Auction is but one example of the massive modernization that occurred across the auto auction industry during the 1980s. Virtually every major auto auction in the country underwent renovation or new construction.

The National Auto Auction Association estimates more than $1 billion was invested by auctions in new or improved facilities in the past decade.



Auction attendees, above, gather for weekly auctions in facilities that are new or have been renovated in the past decade. Below, auctions today operate modern car-washing systems and sophisticated paint booths that rival those of new-car dealerships.

Building boom is over

While the auto auction business is expected to remain strong throughout the 1990s, no one predicts a continuation of the explosive growth in vehicle volume of the past decade.

The building boom is also over. The chains and independent operators say they are done with construction.

Darryll Ceccoli, president of Manheim Auctions, Atlanta, says in addition to modernizing auction facilities, the industry gained sophistication in the way it does business.

"We became inventory trackers, paint, body and reconditioning experts," he adds. "We learned to market in a bigger way to get the message out to new-car dealers about factory sales. We learned new sophisticated operating systems."

With this new infrastructure in place but with the prospect of lower volumes of program cars, auto auctions face the challenge - and opportunity - to find new markets and new ways to use their facilities, capabilities and people.

1990s: The decade of customer service

If the 1980s were the decade of explosive growth, the 1990s willbe the decade of customer service.

"I think if you are doing business today like you did yesterday you are behind the times," says Larry Hedrick, owner of Statesville Auto Auction, Statesville, N.C. and outgoing president of NAAA. "Instead of just passing one title to another and collecting a fee, I see auctions adding a lot more services in the future."

Barry Roop, general manager of the Dallas Auto Auction and incoming NAAA president, predicts some auctions will create job positions exclusively aimed at customer service.

"These will be employees whose job is to keep tabs on an account, be it a manufacturer, a fleet/lease customer or a new- or used-car dealer, to make sure those customers are handled properly," says Roop.

"Auction people realize if their business are to succeed we have to not only do what we do efficiently but we must make customer service absolutely key," adds Roop.

Auctions adopt 'cradle to grave' approach

An advancement Manheim's Ceccoli sees is a more "cradle to grave approach" to the resale business. This approach has been used to some extent by some auctions, but Ceccoli expects it to become more widespread.

In this concept, auctions track a vehicle, pick it up and transport it to the auction. The auction then reconditions and sells the vehicle and transports it to the buyer.

Larry Brasher, owner of Brasher's Sacramento Auto Auction, Rio Linda, Calif. and Brasher's Northwest Auto Auction, Eugene, Ore. calls it the full-service auction.

Brasher says the concept will be expanded from primarily transportation and reconditioning to include repossession services for financial institutions, financing, titling administration and warranties, many of which are already offered by his West Coast auto auctions.

Marketing reconditioning to dealers

Auctions must also find new markets for their modernized reconditioning services. New-car dealers top the list of prime candidates.

"Hundreds of millions of dollars were invested by auctions for the benefit of manufacturers to put the program cars into A-1, ready-to-sell condition," says Anglo President Michael Richardson. "With manufacturers' demand decreasing, we will concentrate our efforts on marketing our reconditioning services to dealers who don't have the facilities and don't have the money or permits to build these facilities.

Adds Manheim's Ceccoli: "Our paint booths and reconditioning operations are second to none. Now we have the opportunity to market our reconditioning services to other customers, whether they are auction users or not. And I predict our shops will be full again."

Computers allow host of new services

Along with modernizing their buildings and reconditioning operations, most auctions installed sophisticated computer systems during the 1980s. Those computer systems allow auctions, among other things, to track their customers and their buying patterns as well as vehicles.

"Automation has opened a whole range of possibilities that never existed before," says Ray Nichols, co-owner of Bel Air Auto Auction, Bel Air, Md. "It allows auctions to gather a data base on its customers - both buyers and sellers."

Echoes Richardson: "Data processing and computer information will become a huge part of our future."

Wire transfer of funds will be commonplace in the future, predicts Lin Musick, owner of Pensacola Auto Auction, Pensacola, Fla. as well as auctions in New Orleans and Alabama.

"Instead of using checks," he says, "we'll wire funds directly into our accounts and wire funds out of our accounts into our customer's account."

Computer automation also makes auctions at satellite locations a future possibility.

Skyline Auction Group already has conducted off-site sales for Mercedes in Jacksonville, Fla.

"I don't know if there is a future for remote sales for us," says Dennis Thee, Skyline president. "But the concept does appear to have certain advantages. The cars never leave the location, and everything is handled on the spot.

"Whatever the outcome, computers, which can be taken anywhere, will allow auctions to be more flexible and creative," adds Thee.

But high-tech won't replace the high-touch nature - that is the personal attention to the customer - of the auto auction business, insists Ceccoli, of Manheim.

Floorplanning: Still off in the future

Auto auction operators are mixed about whether providing floorplanning to dealers will become a widespread practice in the future. Floorplanning has been tried and is now offered by some auctions but has yet to spread widely throughout the industry.

Brasher predicts an increasing number of auctions will extend credit to dealers. His West Coast auctions provide financing for 45 days to their dealers.

Other auction operators, including Skyline's Thee, believe financing by auctions has inherent problems, including the need for a major financial source and instant confirmation of a customer's credit report.

Warranties: has their time come?

Likewise, warranties get similar mixed reviews. Some auctions have offered warranties on vehicles they sell, but the practice too has yet to become widespread. Still, many auction operators believe it is in their future.

"I think it's a thing of the future - a big thing," says Richardson.

Adds Ceccoli: "There's room for warranties. It's a matter of how you bring it out."

Brasher's California auto auction already offers a warranty. Called the Sacramento 500, the warranty guarantees that if the dealer-buyer has a mechanical problem in the first four days or 500 miles, whichever comes first, the seller will fix it.

Auctions tap new markets

Many auction companies also are using or looking at using their sophisticated auctioneering skills and modernized facilities to sell items other than motor vehicles.

Manheim, for example, obtained a contract with the U.S. Department of Justice to sell merchandise seized by the U.S. marshals east of the Mississippi River. That merchandise has included, so far, gold bullion, art and jewelry. ■

DATA

Dealer, ADP clash over computer files

continued from PAGE 6

ports to enter computer systems to correct problems or make data base changes.

"We may be making adjustments to a dealer's computer system five times a week," said Jack Proud, senior vice president of automotive systems for Reynolds and Reynolds Co. in Dayton, Ohio.

Proud decscribed one typical situation.

He said a dealer may have performance problems — the computer slows down — at certain times of the day. The vendor will enter the system to monitor the number of programs and transactions running in that period. The vendor can then suggest remedies.

"Sometimes the computer industry doesn't do a good enough job of telling dealers the number of services we perform in the dealership without their knowledge," said Proud. "We are constantly fixing programs and making upgrades to keep the systems current."

Even Reynolds and Reynolds has an interest in dealer information. It has teamed with J.D. Power and Associates, a market research firm in Agoura Hills, Calif., to collect raw data from dealers who subscribe to a new service.

Power analyzes data on topics such as consumer satisfaction, then gives dealers its findings.

David Kiefer, national marketing manager for Auto Tell Service, based in King of Prussia, Pa., says the company doesn't have access to the systems of most of its customers because most modifications are sent to the dealerships on tape.

But the company is selling some auto-dial modems that enable it to make modifications by telephone.

"We feel the data belongs to the dealers, and we don't want to use it without permission," Kiefer said.

Manufacturers are limited to the information they can obtain from dealers.

They have access only to information in dealership computer systems that dealers want them to have.

"A dealer must decide on privacy on an individual basis," said Kelderman.

"As the market becomes more competitive and information more critical, dealer information will become more of an issue."

Lab gets funds for battery r&d

BERKELEY, Calif. — The Lawrence Berkeley Laboratory, a government research center, will get $1.1 million for basic research on lithium-polymer batteries for electric vehicles. Until now, the lab's high-tech batteries have been tiny, as for a watch.

The U.S. Advanced Battery Consortium has a $260 million research budget.

LEASE

For '93, GM offers attractive plan

continued from PAGE 3

That means if a car's sticker is $20,000, the most the dealer can charge is $18,400 in determining the rate.

Oldsmobile excludes the Eighty Eight, Ninety Eight and Bravada from this program. Buick and Pontiac also exclude some models.

If a customer opts for an uncapped rate, dealers can charge 7 percent interest and base the transaction on as much as the full sticker price of the vehicle, while getting the same residual value support.

One of the drawbacks of the new lease programs is that none of the option package rebates GM is offering on 1993 models can be applied to those plans.

GM has made a major change in its rebates this year, basing them on the value of its optional equipment packages. The more expensive the package, the higher the rebate.

The 1SB equipment package on the Oldsmobile Ciera, for example, carries a $500 rebate, and the more expensive 1SD package carries a $750 rebate.

"But," Pickelhaupt said, "you can't use the special lease program in conjunction with the rebate program."

PONTIAC

New campaign touts 'driving excitement'

continued from PAGE 3

Mark Gjovik, DMB&B management supervisor on the Pontiac account, said the division is taking on the imports as a way of reaching out to import intenders and reassuring domestic buyers that Pontiac cars are just as good as the imports.

Added Noel Nauber, DMB&B group creative director: "We want to keep focused on relevant features and salient benefits. Our cars, under close scrutiny, hold up and in many cases exceed the competition. We've got the stuff and, in some cases, the stuff they don't have."

The 1993 campaign is a departure from Pontiac's advertising trademark of the 1980s: shots of hard driving cars, pulsating music, people depicted in leisure activities. Then, the focus was style, with little or no emphasis on value and quality.

Pontiac's image readjustment for the 1990s began in earnest last spring with a TV spot for Bonneville, called "Market Street." In that spot, two executives discussed the virtues of various luxury cars and compared Bonneville to Lexus and BMW.

Pontiac's fall buys include network TV, cable TV, radio, newspapers and magazines.

Gjovik said Pontiac's fall media schedule will include fewer TV programs and publications, but with greater frequency.

Pontiac's print campaign will include "copy splits" in newsweeklies, meaning that subscribers will get different Pontiac ads in their magazines depending on their ZIP codes.

Gjovik said, "Now we can target more specifically the media that is more friendly to reaching (our) audience."

Europe's sales up in August, but future gloomy

DIANA T. KURYLKO
Staff Reporter

FRANKFURT — European auto sales rose 3.6 percent in August with the aid of a 38.7 percent increase in Germany, but analysts said the rise is only temporary.

According to *Automotive News* estimates, sales in the 17-nation market rose to 1,049,800 units last month from 1,013,000 a year earlier. But for the eight-month period, sales were down 2.3 percent from last year, to 9.56 million.

Sales in Germany, Europe's biggest market, soared to 228,900 units last month from 165,000 a year earlier.

But analysts said the 1991 figure was artificially depressed by the expiration of incentive programs. "Germany is working off the backlog and getting back to normal levels," said Edmund Chew, who follows the industry for DRI/Europe in Frankfurt.

For the eight-month period, German sales were off 11.5 percent to 2.77 million units.

Arthur Maher, an analyst in DRI's London office, said European makers are moving deeper into recession: "The downturn in Europe will continue into 1993."

Italy, Europe's second biggest market, was down 2.6 percent for the month but was up 3.7 percent for the year through August. The Italian market has been showing solid gains since August 1991.

Sales in the United Kingdom edged up 1.7 percent last month to 373,800 units, but still were off 2.5 percent for the year to date. Analysts expect sales to total about 1.55 million this year, the lowest since 1980.

Despite a cut in the value-added tax to 18.6 percent from 22 percent, sales in France remained flat in August at 153,000 units. For eight months, sales in France were up 0.2 percent.

Ford of Europe surpassed Volkswagen AG as Europe's best-selling automaker in August. Ford sales rose 5.7 percent, to 148,300, while Volkswagen jumped 16.3 percent from a weak 1991 month, to 144,300.

But Ford, which recently announced production cuts, cannot maintain that momentum.

Analysts expect Ford and other makers in the United Kingdom to slash output further in the coming months amid currency and interest-rate problems.

For the eight months, VW sales totaled 1.63 million units to Ford's 1.12 million. AN

Lordstown defeated Mexico in GM pact

LIZ PINTO
Staff Reporter

The Mexican standoff in Lordstown, Ohio, between the UAW and General Motors earlier this month ended when GM flinched first.

A strike at the Lordstown fabricating plant had GM against the wall, and GM wanted to avoid a separate strike at the Lordstown assembly plant where 7,800 workers threatened to walk off the job. Many analysts believe the company caved in to union demands too soon.

The most significant portion of the agreement that staved off a strike by the assembly workers was a guarantee by GM that any decline in production of the Chevrolet Cavalier and Pontiac Sunbird will come out of the production schedule at GM's plant in Ramos Arizpe, Mexico, not Lordstown.

GM spokeswoman Linda Cook said, "Based on our forecasts and schedules, we believe we will be able to support both plants (Lordstown and Ramos Arizpe) with orders."

Michael Luckey, an independent analyst, said the concession could affect GM's ability to reduce costs by keeping work at Lordstown during economic downturns instead of allowing GM to take advantage of lower Mexican production costs.

"GM should have hung a lot tougher in Lordstown," Luckey said. "The Mexican concession sets a precedent for other plants to get the same kind of deal and will have strong implications for the industry because of pattern agreements."

Harley Shaiken, labor expert from the University of California San Diego, calls that portion of the settlement "clear and extremely important language" that "explicitly addresses the relationship of U.S. and Mexican plants that produce the same or similar product for the U.S. and Canadian market."

The Plymouth Acclaim and Ford Escort are produced at both U.S. and Mexican plants.

Steve Babson, a labor expert at Wayne State University in Detroit, said Ford's Wayne, Mich., plant, which builds the Escort, is concerned about production moving south of the border and taking jobs along with it.

He said the Lordstown provision "could very well produce interest in that kind of protection" for other Big 3 plants.

Bill Bowers, president of UAW Local 1112 in Lordstown, said the agreement at the assembly plant "guarantees our future by guaranteeing that any decline in production will be suffered in Mexico not in Lordstown."

The UAW is playing up that part of the settlement in the aftermath of the agreement by the United States, Canada and Mexico on a free trade pact. UAW President Owen Bieber has said the trade pact "will vaporize thousands and thousands" of good-paying U.S. jobs.

The trade agreement must be ratified by the legislatures of the three countries before it takes effect.

Labor leaders fear automakers will transfer jobs to Mexico to take advantage of cheaper labor and relatively relaxed environmental protection costs.

Analysts estimate that Mexican labor costs are one-tenth of those in plants in the United States. AN

3-door Escort lure tested

Calif. offer adds free equipment

KATHY JACKSON
Staff Reporter

Using California as a test market, Ford Motor Co. hopes to increase three-door Escort LX sales by jazzing up the model with a sports package and offering it to California buyers free of charge.

The sports package includes a liftgate spoiler; 14-inch aluminum wheels; bigger tires; sport steering wheel and tachometer. Retail cost to buyers of the package in other parts of the country is $757. But for Californians, it will be free.

"This will definitely increase sales" of the three-door, said Jim Forster, new-car sales manager at Ray Andrews Ford in Covina, Calif.

The three-door LX needs help. Ford implemented a national one-price Escort program in April when the 1993 models went on sale. Under the program, all LX models — the three-door, five-door, sedan and wagon — sell for the same price: $10,899 for the manual and $11,631 for the automatic. Standard equipment includes power steering, rear window defroster, air conditioning and other equipment.

But sales of the three-door have suffered because most Escort buyers want the larger vehicles. Ford Division General Manager Ross Roberts says wagon sales represent over 50 percent of total Escort LX sales, compared with 17 percent before the one-price program began.

"It's the best value in America — period," Roberts said of the Escort wagon.

But workers at the Wayne, Mich., plant, who assemble the three-door model, have faced massive downtime, while their colleagues at Hermosillo, Mexico, who produce the wagon and sedan, are working a steady schedule.

"We recognize the concerns of workers at the Wayne assembly plant," Roberts said. "We need to se'l more three-doors so we'll look at a lot of opportunities to take care of that issue."

The sports package will be part of the one-price program only in California. Roberts says Ford Division is considering other programs for other parts of the country. "We're looking at several alternatives which should equalize downtime," he said.

California has been an important market for Ford's test programs. Sales of the 1992 Thunderbird soared 100 percent and sales of the 1992 Cougar jumped 85 percent in the Golden State after Ford loaded the vehicles with equipment and sold them at base-car prices.

California dealers say adding the sports package to the three-door Escort should make a difference.

"Before, it was just a plain three-door car," said Bruce Newmark, general sales manager at Midway Ford in Los Angeles. Newmark said with the sport appearance group, "it will make the car more competitive to the imports; it will now appeal to the market it was intended for — the younger buyer."

The three-door also gets a radio and cassette player as standard.

Forster said about 10 percent of his Escort orders had been for the three-door, but with the new sport package, he will raise his three-door mix to about 20 percent. ■

Mercury has record budget to spend on Villager launch

DETROIT — Lincoln-Mercury will spend an estimated $20 million on the 1993 Mercury Villager advertising launch — the most expensive launch in the division's history.

Lee Miskowski, L-M general manager, said the extensive campaign is needed because the division has no minivan owner body and must attract a new group of buyers.

L-M has scheduled a "roadblock" on the four major TV networks to advertise the Villager at 9 p.m. Sept. 24. The division will reach 51 million people within minutes.

A four-page insert in *Time, Life, Newsweek, Reader's Digest, USA Weekend* and automobile enthusiast publications also is planned.

Villager ads stress the message: "The Minivan that Drives Like a Car."

Miskowski said the theme of advertising for the 1993 Mark VIII is "Drive Everything Else First." The Mark VIII, bowing Dec. 26, will compete with the Lexus SC400 and SC300, the Acura Legend and the Cadillac Eldorado.

The Mark VIII will be priced between $37,000 and $38,000, and is expected to appeal to buyers 45 to 50 years old with a $100,000 annual income, Miskowski said. Fifty-five percent of buyers are expected to be male.

In a departure from recent years, Mercury plans a TV spot showcasing its seven car lines. "We want to let our consumers know that we make more than just big cars," Miskowski said.

Mercury retains its theme line: "All This and the Quality of Mercury." Lincoln keeps its established theme: "What a Luxury Car Should Be."

The division will be the exclusive sponsor of the TV miniseries "The Wild West," a 10-hour, five-night program airing in March. ■

SUBARU

Tiny Justy marked for death in 1994

continued from PAGE 1

"I'm not sure anybody makes money in the segment. I know we don't," said Joel Pitcoff, research and analysis manager for Ford Motor Co.

And now Subaru of America plans to kill its money-losing Justy in the United States, said Chuck Worrell, executive vice president.

"It's become too expensive for what it is, and when you look at the numbers, it really doesn't make sense," he said last week.

Subaru sold only 2,444 Justys in the first eight months of this year, down 50 percent from last year. And 1991 sales were 75 percent below 1988. Fuji Heavy Industries Ltd., which builds Subarus, has a Justy replacement in the works for 1994 or 1995, but America probably won't get it.

The basic 1992 Justy is priced at $6,945. But such features as four-wheel drive, air conditioning and automatic transmission (Subaru's Electronic Continuously Variable Transmission) push the sticker to $10,537.

The eight nameplates with models priced below $7,000 accounted for 223,377 sales in 1991, compared with 474,093 in 1988. The only one to increase volume over the span is the Geo Metro, which is built in Canada on a Suzuki platform. The Metro and its Suzuki Swift twin are the only two among the eight to increase volume through the first eight months of 1992.

The extreme low end is being squeezed on all sides:

- Manufacturing costs are rising in Japan and also in Korea, the countries where most econocars are built.
- Consumers are demanding bigger and better cars. Safety and emissions requirements have also boosted entry-level prices.
- Plans for most of the cars were made in the mid-1980s, when the dollar was worth about 250 Japanese yen. Since then, the rate has fallen and stayed at about half that, making Japan's exports to the United States less profitable.
- Gasoline prices are low. In 1981, after the last gas crisis, all subcompacts had 29.8 percent of the market, according to Ford figures. Last year, their share was 19.6 percent.
- People at the entry level have the least money, obviously. When the economy turns down and credit tightens up, they're the most vulnerable. And there are fewer potential entry-level buyers out there. The "baby bust" has followed the baby boom, and the boomers are now driving bigger cars.

"Entry-level buyers have the lowest creditworthiness and the highest need to finance. That hurts them. They're buying a used car or keeping the old car," said Ford's Pitcoff.

Chrysler's Lutz said he couldn't predict where entry-level prices will be a year from now.

"The real question in this segment is, what kind of a car do you give people? If you give 'em a tiny, little box, with no content and no value perception, you're going to have real trouble," he said.

"If you give 'em an entry-level car with a big package, with features not normally found in a car of this type, with a level of performance not found in a car of this type, with excellent styling, we think we can find 250,000 to 300,000 customers for a car like that," Lutz said.

"Now, I've given you our game plan," he said, referring to the PL line of subcompacts that replace the Shadow/Sundance in the 1994 model year.

Without the Justy, Subaru will rely on the compact Legacy and the subcompact Impressa, which replaces the 8-year-old Loyale next February. The new car hasn't been officially named for the U.S. market, but insiders refer to it as the Impressa, which is its name in the Japanese market.

Subaru in the future will also sell a smaller volume of a "third vehicle," Worrell said. That's likely to be a sport-utility built by another maker, maybe Nissan Motor Corp., Fuji's partner in Japan. ■

ECONOCAR SALES, 1987-1991
(Cars priced $7,000 or less)

	1991	1990	1989	1988	1987
Geo Metro/Sprint	90,712	97,165	52,792	48,088	60,359

TOTAL	**223,377**	**292,817**	**338,959**	**474,093**	**433,429**

Source: Automotive News Data Center

Subaru sold only 2,444 Justys in the first eight months of 1992, just half of year-ago period sales. And 1991 sales were 75 percent below the 1988 total.

Lutz tells Dodge dealers to hold to Viper price

NEW YORK — Some Dodge dealers are gouging customers for more than twice the $50,000 suggested retail price of the Viper sports car, says Chrysler Corp. President Robert Lutz.

"I hate to say it, but I guess we underpriced it," Lutz told the International Motor Press Association.

He confessed it was "kind of nice" to have a car that sells at such a high premium.

But he said Chrysler tries to discourage gouging: "We don't like what's going on. We're contacting dealers and pointing out that this is the creation of dissatisfied customers."

As of last week, Dodge had built 120 Vipers, he said. Plans call for 200 to be built this year, but production is supposed to jump to 5,000 in 1993. Through the end of August, 39 Vipers had been sold.

"They (customers) will find out we are not producing a limited-edition collection series. We have to produce this thing in some volume," Lutz said.

He said some dealers have stuck to company policy and sold for sticker price, only to have customers sell the car for a much higher price at auction. He said last week one was resold for about $118,000.

One general manager said his dealership had received only one Viper, and he decided to hang onto it, rather than sell it to one customer and anger everybody else.

"With all the hype this car has gotten, then you only get one car out of 200, it would be ridiculous to sell it at sticker. What does Chrysler expect?" said Carl Galeana of Saturn of Warren (Mich.).

The family also owns Van Dyke Dodge in Warren.

SPEAKERS

Eaton, Pretcher top World Congress list

continued from PAGE 1

Europe when on March 16, 1992, the Chrysler board chose him to succeed Chairman Lee Iacocca. He also was elected a member of Chrysler's board of directors.

At GM, Eaton held various management and engineering positions before being named assistant chief engineer at Oldsmobile in 1979. He became director of quality and reliability for Oldsmobile and vice president in charge of the advanced engineering staff in 1982.

In 1986, Eaton was named vice president and group executive in charge of the GM technical staffs, and in 1988, he was appointed to the Europe post.

Prechter formed ASC in a two-car garage in 1965, and expanded to Detroit in 1967. Today, ASC Inc. is the parent company of three worldwide subsidiaries: American Sunroof Co., Automobile Specialty Co. and Aeromotive Systems Co.

The company supplies the auto industry with vehicle conversions and specialty components, including sunroofs, convertibles and vinyl tops.

Prechter began installing sunroofs while studying business administration and English at San Francisco State College.

Prechter is also active in national politics, and he heads a presidential advisory committee on international trade. Prechter accompanied President Bush to Japan last winter.

Eaton and Prechter will open the 1993 Automotive News World Congress in an evening session Sunday, Jan. 10. Two days of sessions will follow, including a gala dinner Tuesday night.

The Automotive News World Congress concludes with a private tour of the North American International Auto Show on Wednesday, Jan. 13. For more information, write Wendy Barhydt and Lisa Hart, Automotive News World Congress, UMTRI/OSAT, 2901 Baxter Road, Ann Arbor, MI 48108-2150. The telephone number is (313) 764-5592. ■

Chrysler mails its minivan incentive to 1.7 million

ARLENA SAWYERS
Staff Reporter

incentive
WATCH

Chrysler Corp. is making direct-mail discount offers to 1.7 million current minivan owners.

Buick and Oldsmobile are offering option package discounts on 1993 models, and Chevrolet has rebates on some 1993 cars and trucks.

Volkswagen United States Inc. is offering dealer incentives on 1992 models, and Ford Motor Co. has implemented a new retail lease program.

Chrysler Corp. is mailing "Minivan Purchase Certificates" worth the $599 price of anti-lock brakes or $500 on minivans not equipped with ABS. The discounts apply to the purchase or lease of 1992 and 1993 **Plymouth** or **Dodge** short- or long-wheelbase minivans. The certificate is worth $500 on the **Chrysler** Town & Country minivan, which has ABS as standard equipment.

The certificates are being sent to 1.7 million persons who currently own 1987 through 1990 Chrysler minivans. The first mailing of 670,000 went out in early September.

The second mailing, directed to about 1 million persons, will go out this month. Owners of 1984 through 1992 minivans who do not receive a certificate can obtain one from their local dealer.

The certificate expires Nov. 27.

Through Jan. 24, **Buick** and **Oldsmobile** are offering rebates on 1993 vehicles depending on the option package selected. The Buick rebates range from $250 to $1,500; Oldsmobile's range from $500 to $1,500.

Chevrolet rebates on 1993 cars and trucks expire Sept. 23. The rebates range from $500 to $1,000 on cars and from $300 to $1,000 on trucks.

The 1993 Geo Storm has no rebate, but 2.9 percent financing for up to 48 months is available.

Through Sept. 30, **Volkswagen** is paying dealers $500 to $1,500 on its 1992 cars.

Ford Motor has implemented a new lease program in an effort to hype sales of the Ford Taurus and Mercury Sable.

With a $1,000 down payment, consumers can lease a Taurus for 24 months at $249 a month, and the company guarantees the residual price at 50 percent at the end of the lease.

The Sable program is identical except the down payment is $1,500.

Staff Reporter Kathy Jackson and Special Correspondent Jennifer Heil contributed to this report.

Pickup	$1,750
PEUGEOT (no expiration date)	
405	$5,000
505	$6,000
SUBARU (1992 models, expires Nov. 3)	
Legacy (invoiced before Feb. 4)	$500-2,500
Legacy (invoiced after Feb. 3)	$1,000-3,000
SVX	$2,000
Loyale awd wagon	$800
SUZUKI (expires Oct. 2)	
Swift (1993)	$300-500
Swift (1992)	$500-1,000
Sidekick (1993)	$300-600
Sidekick (1992)	$700-1,000
TOYOTA (expires Nov. 3; all rebates are based on dealer's performance against quota)	
Tercel (1992)	$100-500
Celica, Corolla (1992)	$400-800
Compact pickups:	
Base 1992	$600-1,200
Other 1992	$300-700
Base 1993	$600-1,000
Other 1993	$100-500

CARB approves Cummins engine

COLUMBUS, Ind. — Cummins Engine Co.'s L10 is the first natural gas fueled heavy-duty engine to receive the California Air Resources Board's approval. It was certified for the transit bus market in that state.

The company also has begun producing a clean-burning diesel version of the 10-liter, called the L10-280E. The engine is designed to meet the same stringent 1994 urban bus emissions set by California and the federal government.

Separately, Cummins said its N14-430 heavy-duty diesel is the latest in its Command engine series to produce a 430 horsepower rating. Like other N14 Command engines, the engine features a newly designed block and other technological changes.

Discovery's U.S. debut delayed

LONDON — The U.S. debut of Land Rover's new Discovery could be a year or more away while the vehicle is revised and upgraded for American buyers, the company's commercial director said last week.

"We won't send it until we feel it's right," said John Russell. "Apart from satisfying legal requirements, we are working to adapt Discovery to United States tastes."

One problem that surfaced is that although the four-wheel-drive sport-utility is marketed as a rugged, go-anywhere vehicle, clinics have shown that Americans find the Discovery's interior "too utilitarian."

SCHEDULED PLANT CLOSINGS

Parts groups seek changes in trade pact

MAX GATES
Staff Reporter

WASHINGTON — Two trade groups told a House subcommittee last week they don't like the special protection given to Canada's parts industry under the North American Free Trade Agreement.

The industry wants to see loopholes closed that could give an advantage to its competitors in Canada and Japan, or force higher levels of U.S. investment in Mexico over the next 18 months.

Other concerns may emerge this week when President Bush is expected to release an industry critique of the deal. In it, parts makers, automakers and truck firms detail their views of the agreement.

Last week, parts associations said they are unhappy with provisions in the text that set aside an estimated 15 percent of the parts in Canadian-built vehicles for Canadian parts makers. That provision existed under previous U.S.-Canada trade agreements and was retained under the proposed U.S.-Mexico-Canada deal.

In testimony before the House subcommittee on trade last Thursday, the 900-member Automotive Parts and Accessories Association urged that special protections for Canadian parts makers be dropped. The group said U.S. negotiators should reject any effort by Mexico to adopt similar protective measures.

At the same hearing, the Motor and Equipment Manufacturers Association raised fears that Mexico may try to force U.S. companies to increase their investments south of the border before free trade would take effect in January 1994.

Mexico could do that by putting into effect more of the trade restrictions contained in its 1989 Auto Decree. Most of the Auto Decree restrictions would be eliminated over the first 10 years after the trade pact takes effect.

In the meantime, "we believe the U.S. government must monitor this situation and seek resolution of any problems which develop before January 1994," said Christopher Bates, director of policy analysis and international trade for MEMA.

Staff Reporter Lindsay Chappell in Nashville, Tenn., contributed to this report.

U.S. AND CANADA CAR AND TRUCK PRODUCTION

All plants working on '93s

GWENDOLYN ZONGHETTI
Special Correspondent

Last week was the first full week of 1993-model production; all changeover downtime has ended.

Car production in the United States last week was scheduled at 109,862, up 21.4 percent over the prior holiday week but down 8.6 percent from the year-ago week.

Year-to-date U.S. car production is 4,045,235, up 4.4 percent from last year.

Truckmakers in the United States assembled 81,157 units last week, a 22.4 percent hike from the prior week, but a 4.9 percent drop form the year-ago week.

So far this year, 2,881,477 trucks have been produced, up 19.3 percent from 1991.

In Canada last week, carmakers scheduled production of 16,443 autos, plummeting 19.4 percent from the prior week and 33.8 percent from the year-ago week.

So far this year, car production in Canada is 735,430, down 6.3 percent from the last year.

Truck production in Canada last week was estimated at 17,215, up 6.5 percent over the prior week but down 10.8 percent from the 1991 week.

Year-to-date truck production in Canada is 687,518, up 17.2 percent from 1991.

Last week's scheduled car and truck production was shared as follows:

General Motors, 41.1 percent; Ford Motor Co., 27.2 percent; Chrysler Corp., 11.9 percent; Honda of America Manufacturing Inc., 4.9 percent; Nissan Motor Manufacturing Corp. U.S.A., 4.0 percent; AutoAllianceInternational Inc., 2.8 percent; Toyota Motor Manufacturing (U.S.A.), 2.0 percent; Diamond-Star Motors Corp., 1.4 percent; Subaru-Isuzu Automotive Inc., 1.4 percent; New United Motor Manufacturing Inc., 1.3 percent; miscellaneous, 1.0 percent; Navistar International Corp., 0.8 percent; and AM General, 0.2 percent.

Today, GM's Lake Orion, Mich., car plant begins a two-week schedule of one shift per day due to high inventories. The plant will resume two-shift production Oct. 5.

At the Janesville, Wis., truck plant, all vehicle lines except the Chevrolet Kodiak and GMC TopKick worked daily overtime last week. The postal line at the Moraine, Ohio, truck plant also worked daily overtime.

Ford slated daily overtime last week at the Atlanta and Chicago car plants and the Kansas City, Mo., and St. Louis truck plants.

Chrysler scheduled daily overtime this week at three car plants and five truck plants.

The car plants are: Belvidere, Ill.; Newark, Del.; and Sterling Heights, Mich. The truck plants are: St. Louis; Jefferson North (Detroit); Warren, Mich.; Toledo, Ohio; and Windsor, Ontario.

GM reviewed by Moody's

NEW YORK — The long-term debt and commercial paper of General Motors and its subsidiaries is under review for a possible downgrade by Moody's Investors Service, a move that could make it more expensive for GM to borrow money.

Moody's said last Friday that it will review GM's competitiveness in core product areas, its ability to improve operations during the soft market, the effectiveness of its cost-reduction programs, its ability to raise capital to implement product programs, how labor unrest might adversely affect operations and how continued erosion of GM's balance sheet could hurt its major subsidiaries.

Those subsidiaries include GM Hughes Electronics Corp., Electronic Data Systems Corp. and General Motors Acceptance Corp.

Two events last week contributed to Moody's review: GM's decision to cut production estimates for the second half of 1992 and a strike at a Lansing, Mich., body plant.

Porsche AG replaces Arno Bohn

DIANA T. KURYLKO
Staff Reporter

FRANKFURT — Arno Bohn's abrupt departure as chairman of Porsche AG last week was apparently prompted by worse fiscal-year results than the controlling families had expected.

Bohn: In in Feb., out in Sept.

Last Friday, the Porsche supervisory board unanimously named one of its members as Bohn's replacement, probably on a temporary basis.

Wendelin Wiedeking, 40, the board member responsible for production, will serve as speaker, rather than chairman of the board of management, giving the families that own Porsche greater daily control over the company.

Because Bohn is departing just before the release of Porsche's 1991-92 fiscal year results, analysts speculate that a loss will be reported. Bohn predicted at the annual meeting in March that the company would show a profit.

GM supplier blitz takes toll

Rockwell exit may threaten timetable for electric car

AL FLEMING
Industry Editor

The aggressive, warrior-like tactics of General Motors' worldwide purchasing czar have prompted a major supplier to withdraw from GM's electric vehicle project, raising the possibility the Impact could be delayed.

GM last week, however, said the project is still on schedule.

Rockwell International Corp. has pulled the plug on a single-source program to develop and produce plastic body panels for GM's electric car, scheduled for introduction in mid-decade.

Rockwell Automotive in Troy, Mich., declined comment, but sources close to the project said the company made the decision when asked by GM purchasing to rebid on the electric-car contract.

The move is an example of suppliers chafing under GM's three-month-old blitzkrieg on costs. In June, J. Ignacio Lopez, GM vice president in charge of worldwide purchasing, canceled existing supply contracts and threw them open to bids worldwide in an effort to cut costs. Sources said Rockwell's management decided that if GM would not honor an existing contract, it could not be trusted to honor a new contract.

A few months ago, it would have been heresy for a supplier to turn down GM business. Rockwell's bold action is raising eyebrows in Detroit. Major suppliers such as Rockwell, with long histories of doing business with GM, are repelled by what they feel are questionable tactics by Lopez and his purchasing organization.

Lopez swings ax at meeting > '34

The officer of a major supply firm said, "We all made a lot of adjustments to accommodate 3-2-2 (GM's program to reduce supply costs by 7 percent from 1991 through 1993). With Lopez, it just comes down to competing with the low- priced guy. We're deciding whether it's worth doing business with him."

Lopez: GM's purchasing czar

Growing numbers of suppliers say they will continue to bid on GM contracts involving commodity products, but not on the advanced programs requiring major investments in new technology, facilities and equipment.

Lexus share of Toyota profit

Contribution of Lexus operation to worldwide operating profit of Toyota Motor Corp. Figures in billions.

* Estimate
Source: Automotive News

MARTHA GRATTAN / AUTOMOTIVE NEWS

Lexus Chief Engineer Ichiro Suzuki zealously avoided the gas-guzzler tax by reserving approval on design changes that would add more than one-third of an ounce to the LS400's weight.

'We achieved the dream'

In just three years, Lexus redefined luxury

It had been a long flight from California, and J. Davis Illingworth had wrestled with demons most of the way.

For 13 hours, as the Japan Air Lines plane flew westward toward Tokyo, the 44-year-old executive, who soon would be named head of Toyota Motor Corp. in U.S.A.'s fledgling Lexus Division, fought hard to beat back waves of anxiety over the project he was about to see.

But the anxiety remained, hounding him through the night. *So much is riding on this*, he'd remind himself. *You have to get it right.*

On the ground on that sparkling March morning in 1987, Illingworth's fears persisted. But as he caught his first glimpse of the car, a silver LS400 prototype, he knew that everything was fine.

The demons were gone. Illingworth had seen his first Lexus.

A BRAND NEW FORCE

Perhaps appropriately, the car that caused Illingworth so much grief that night in 1987 has since wreaked equal havoc on the nerves and equilibrium of scores of automotive executives at rival companies around the globe.

These articles were reported by Staff Reporters Kristine Stiven Breese in Los Angeles; Diana T. Kurylko in Frankfurt; and Richard Johnson and Mary Ann Maskery in Tokyo. They were edited by International Editor James R. Crate in Detroit.

Indeed, in the three years since it went on sale in the United States in September 1989, Lexus has stood the industry on its ear as few cars have.

By presenting a challenge that few thought attainable — a superior-quality, volume-produced luxury car priced below $40,000 — Lexus almost overnight moved the price/value bar in the segment to stunning new heights.

All the marques that once dominated the luxury class have felt the new competitor's bite. Sales of all Lexus models, which rose 12 percent in 1991 over 1990 to 71,206 units, were up 46 percent for the first eight months of 1992 to 59,955. About one-third of last year's sales and 40 percent of this year's have been the near-luxury ES sedan.

And the gains continue to come out of competitors' pockets: Through July, 39 percent of trade-in Lexus sales were defectors from European marques; 38 percent came from U.S. marques; and

Paint flaw haunts Nissans in Tenn.

11,000 damaged; acid rain suspected

LINDSAY CHAPPELL
Staff Reporter

NASHVILLE, Tenn. — Nissan Motor Corp. in U.S.A. is selling more than 11,000 new cars and trucks at discount rates to fleets, auctions and company employees because of a mysterious paint problem at its U.S. factory.

The company suspects that acid rain caused surface damage to at least 11,000 vehicles located outside Nissan Motor Manufacturing Corp. U.S.A.'s plant in Smyrna, Tenn. Other automotive operations in the region — including dealerships and General Motors' Corvette plant 90 miles away in Bowling Green, Ky. — have experienced similar problems.

The Saturn Corp. plant in Spring Hill, Tenn., has not reported any similar damage.

Nissan is titling most of its damaged vehicles and selling them at discounts to dealers, auctions, employees and fleet buyers as used vehicles.

Officials at the Nissan plant say they have not determined the cause of the problem. Imported vehicles at a Nissan distribution center located beside the factory also were damaged, including dozens of Infiniti, Pathfinder, Maxima and 300ZX models.

In Bowling Green, similar conditions prompted the Chevrolet Corvette plant to begin covering its completed vehicles with plastic sheets this summer. Past incidents have required the sports-car plant to repaint the cars.

The problem at Nissan affected mostly Sentras, pickups and Altimas. About 1,300 Altimas had to

UAW strikes GM Lansing

More than 4,000 UAW workers at the General Motors body assembly operations in Lansing, Mich., walked off the job Friday over issues relating to relief scheduling and work loading. Talks were scheduled to reconvene Saturday, but the impact was immediate, forcing GM to shut its chassis operation there.

The union wants GM to reactivate about 300 people placed in GM's Job Opportunity Bank-Security program when the company changed plant relief time schedules. Workers in the program receive 100 percent of their pay and benefits even though they have no jobs.

The local also wants additional manpower to ease workloads in the plant.

— Liz Pinto

Ford warns of buckle flaw

DEARBORN, Mich. — Ford Motor Co. is notifying owners of about 337,200 1984-85 Ford Mustangs and Mercury Capris that the front seat belt buckles may break.

Ford said a small plastic component in the belt buckle assembly may deteriorate due to long-term exposure to sunlight. If it breaks, the buckle may separate from the belt webbing.

CAMI rebuffs union overture

The striking union at CAMI Automotive Inc. in Ingersoll, Ontario, was rebuffed last week in an effort to open negotiations with the company.

Canadian Auto Workers bargaining representatives approached the company twice with what appeared to be concessions to their original demands. But a CAW spokeswoman said no talks are scheduled for the joint venture and none are expected.

CAMI, a joint venture between General Motors of Canada Ltd. and Suzuki Motor Co. Ltd., went on strike Sept. 14 over compensation and worker grievance issues.

Union officials said they offered to negotiate a three-year phase-in of contract agreements with the company, and also indicated that they now would accept non-parity with the rest of GM's Canadian work force. By special agreement, CAMI workers earn about $1.33 Canadian ($1.07 U.S.) less an hour than other GM workers in Canada, and about $1 Canadian (80 cents U.S.) less in benefits.

— Lindsay Chappell

Moody's looks at Volvo rating

LONDON — Commercial paper ratings for AB Volvo of Sweden and its subsidiaries is under review for a possible downgrade by Moody's Investors Service, Moody's announced last week.

The review focuses on the adequacy of Volvo's debt-reduction efforts, considering the continued sluggish worldwide vehicle market and growing financial pressures in Scandinavian countries, Moody's said. Volvo's debt was being reduced more slowly than expected, Moody's said.

New Camaro to pace Indy

INDIANAPOLIS — The redesigned 1993 Chevrolet Camaro Z28 will pace the Indianapolis 500 on May 30.

This marks a record ninth time for Chevrolet as an Indy 500 pace car and a record fourth time for the Camaro.

The new Camaro Z28 coupe and its 275-horsepower version of the Corvette LT1 5.7-liter V-8 engine will be able to pace the 77th running of the race without performance modifications.

Fiat reports 55% profit dip

FRANKFURT — Fiat SpA, parent company of the automaker, said group pretax profit fell 55 percent in the first half to $566 million from $1.25 billion a year earlier.

Revenues were up 2 percent to $22.53 billion from $22.17 billion in 1991.

Fiat Auto, the company's core business, sold 918,000 units in the first six months with a 12.6 percent market share in Europe, compared with 973,000 cars and a 13.5 percent share a year earlier.

— Diana Kurylko

Dems push content clause

WASHINGTON — In an 11th-hour move, congressional Democrats attached a tough domestic content labeling law to a key transportation funding bill that emerged from a House-Senate conference committee late Thursday.

The law would require that cars sold in the United States carry a label detailing the percentage of domestic content in the engine, transmission and the entire vehicle.

U.S. and Canadian content would be considered "domestic," but labor costs would not be included in the calculation. Importers have criticized the bill as a "back-door, Buy American" maneuver. A veto by President Bush is unlikely.

— Max Gates

GM, Iveco eye Argentina

General Motors and Iveco, the Italian truckmaker, are studying a joint venture in Argentina to build trucks or cars.

Nothing built would conflict with Iveco's truck line, said Albert Buchanan, the senior adviser to the company that is handling the negotiations. But a joint venture could affect one of two distribution agreements GM now has in Argentina, which will run out this year, he said.

One involves local assembly of Brazilian-built kits for pickups and distribution by the Sevel group and marketed under the Chevrolet name.

The second agreement is with Ciades, in which Renault of France is a minority shareholder. Ciades sends Renault's Trafic van to Brazil, to be marketed there with the Chevrolet nameplate, while GM Brazil sends to Argentina its Chevette subcompact and the Chevy 500 pickup version, both of which are marketed with a GMC nameplate.

— Rik Turner

briefly

Ads say Saturn is slow good

Saturn Corp. wants to make sure that out-of-cars doesn't result in out-of-mind. To reassure wannabe Saturn owners, the company is running newspaper ads explaining that high demand for the import-fighters has left cupboards almost bare — for the time being. "Of course we could build them faster," touts one ad. "It's just that we won't."

STOCK OPTION — The first Chinese company to be listed on the New York Stock Exchange could be a carmaker. **Brilliance China Automotive Holdings** is preparing its paperwork for the Big Board. It owns 51 percent of **Shenyang JinBei Passenger Vehicle Manufacturing Co.**, the company that has a joint venture with **General Motors** to build pickups.

FORD FANS — Readers of *Design News*, an engineering magazine, were asked this year to name the U.S. automaker "with the best combination of technical know-how and business acumen." Results: **Ford Motor Co.**, 56.1 percent; **GM**, 25.2 percent; **Chrysler Corp.**, 17.0 percent. Readers also named the Ford Taurus their favorite "New Car I Would Buy Today." **Lexus** was their favorite luxury car under $35,000 and **Mercedes-Benz** their favorite without regard to practicality or cost.

SHOPPING BAGS — Car thieves in Detroit are stripping the airbags out of their targets and selling them to unscrupulous auto parts dealers. Police Chief Stanley Knox said stepped up inspections of used-parts dealers have resulted in two junkyard closings and some fines. No numbers are kept on this relatively new crime, but one Detroit victim was a police commander whose unmarked **Ford** Taurus was stolen from his driveway.

POWERFUL TIE-UPS — J.D. Power and Associates, whose mission is to help automakers put more cars on the road, has been bitten by the hand that feeds it. The market research firm has opened a satellite office in Torrance, Calif., closer to the Los Angeles-area headquarters of many of its Asian import customers. Why? Power and its clients want to meet "without having to contend with the near impossible traffic problems" around firm headquarters in Agoura Hills, Calif.

WHERE'S THE STOPWATCH? GM will bring the electric Impact next month to Convergence '92, part of which happens on a **Ford** test track in Dearborn, Mich. A total of 13 electric vehicles are coming to the party.

ALL IN THE TIMING — Synchronous operation isn't just for manufacturing anymore at **Oldsmobile**. General Manager John Rock ordered the sales and marketing employees to undergo the same type of training given to **GM** manufacturing employees. Strategies include reducing lead time, building in small lots, organizing facilities and equipment to improve production flow, leveling the production schedule and verifying quality. Rock believes creating a proper atmosphere to attract buyers requires a change in thinking from the top of the organization to the bottom.

Rock: all of Olds gets trained

Chevrolet looks beyond '93 to new products

PHIL FRAME
Staff Reporter

GOODISON, Mich. — Taking a page from Lee Iacocca's book, Chevrolet General Manager Jim Perkins climaxed a preview of the division's 1993 products with a slide show of seven future cars and trucks.

The goal was to show that reinforcements — in the form of fresh new models — are coming in a wave between now and the 1995 model year.

The future-product presentation also was intended to keep journalists from reporting how badly Chevy is doing because its cars and trucks are old.

Iacocca and Chrysler Corp. used the same tactic before the 1981 model year introductionof the K-cars and last year with the 1993 LHs to show that rumors of that company's demise were unfounded.

Perkins showed off the next Camaro, due midway through the 1993 model year; the 1994 Monte Carlo coupe; the 1994 Lumina sedan redesign; the 1994 S10 pickup redesign; the S10 two-door and four-door Blazer redesigns due midway through the 1994 model year; and the 1995 Cavalier redesign.

"Between now and 1996, nearly all of our cars will have a major redesign, and between now and 1998, nearly all of our trucks," Perkins said.

Some of Chevrolet's 4,555 dealers have complained that parent General Motors has ignored the needs of its biggest division while pouring out billions of dollars to launch Saturn Corp.

To counter that claim, many of the corporation's top executives attended last week's preview at a Detroit area cider mill to show they support Chevrolet.

While the future may appear bright for Chevrolet based on the slides of the new vehicles, the problem will be getting through the 1993 model year, which Perkins admitted will be a year of transition.

In other words, Chevrolet dealers should prepare themselves for a rerun of what happened in the 1992 model year. Perkins said sales in the 1992 model year are expected to total 1,019,000 cars (down about 14 percent from the previous model year) and 1,186,000 trucks (up about 9 percent).

In the 1991 model year, Chevrolet beat Ford Division in car sales and lost in trucks. In the 1992 model year, Ford will win both crowns by comfortable margins.

Through eight months of the calendar year, Chevrolet sold 720,378 cars, compared with 825,540 for the same period of 1991. Chevrolet sold 776,740 trucks in the first eight months of 1992, compared with 733,616 in 1991.

Perkins said he doesn't believe the 1993 model year for cars will be much better — a 3.5 percent sales growth for Chevrolet compared with industrywide sales growth forecast at 5 to 8 percent. That translates to industry car sales of 8.2 million to 8.9 million.

Chevrolet will suffer because it expects one-third fewer fleet sales, mainly because GM ceased subsidies for daily rental fleets.

"Program cars saved a lot of grief for a lot of people, but we've got to find the balance point," Perkins told the group.

He said the program car busi-

HONDA ISN'T RESTING

Minivan, V-6, sport-utility eyed

DAVID VERSICAL
National Editor

DETROIT

Honda's U.S. sales boss came to the Motor City with news to dispel any conceptions that Honda has lost its edge.

Thomas Elliott, executive vice president of American Honda Motor Co. Inc., was coy about details, but strongly suggested that the company:

- Will offer a V-6 in the next Accord, due out next year.
- Will build a minivan.
- May sell a sport-utility.

And he has already started a program to bolster lagging sales satisfaction levels at dealerships.

The product plans cut to the heart of questions about the Honda line. By some popular accounts, the division has grown conservative while leading the U.S. sales charts for three years with the Accord.

But Elliott, in Detroit for a press preview of Honda's 1993 line, dismissed the suggestion that Honda has lost its glow.

"The halo is not diminishing," he said in an interview with *Automotive News*. "There are just a whole lot more alternatives out there."

Lots of those alternatives have V-6 engines or are trucks, but Honda finally appears ready to compete head-to-head.

Elliott gave no specifics on the V-6, and he did not say if it would be ready in time for the start of 1994 production next year. But his words came as a rare, firm signal of Honda's future product plans. And his comments were echoed last week in Japan by the parent company's No. 2 executive, executive vice president Yoshihide Munekuni. "If consumers want a V-6 within the family car concept, we are waiting to respond to that request," Munekuni said.

In addition, next year's Accord will have a "very different styling look" than the current model, Elliott said. The current generation echoes its predecessor.

Honda appears ready to expand its long-standing lineup of the Civic, Accord and Prelude.

"If Honda is going to grow long term, you have to look at more segments," Elliott said. A decision on a minivan is near, he said. Sport-utilities will be a second choice for a new line, followed by a car below the Civic, he said. He said Honda is not ready to do a pickup truck.

Honda has traditionally taken a hands-off approach to dealers, Elliott said. But that is changing. The company ranks low in J.D. Power and Associates sales satisfaction rankings. And it needs to reduce the 40 percent-plus turnover in its sales force every year. While Elliott didn't share specifics about the programs, he said 15 people have been hired at the company's California headquar-

Recession catches up with high-priced cars

Aura of immunity is shattered

JIM HENRY
Staff Reporter

NEW YORK — Times are tough, conspicuous consumption is uncool and you can't get much more conspicuous than a red Ferrari. Therein lies the problem for cars that have six-figure prices.

Cars such as Ferrari, Rolls-Royce, Aston Martin and Lamborghini once had a reputation for being recession-proof. They survived the 1980-82 recession with barely a dent in sales.

More than 90 percent of Rolls-Royce's customers are millionaires, and about half have a net worth of more than $5 million. They own at least five cars and two or more houses.

Because the customers are so rich and the cars so rare, exotic cars aren't affected by economic downturns, the theory went.

Until this recession.

U.S. sales for Rolls-Royce, for instance, fell more than 60 percent to only 447 cars last year. Sales were up 12 percent through June, to about 250 cars. But that's still less than half the 1990 rate, and marketers are worried that the volumes of the late 1980s are gone for good.

"I don't think anyone's immune if things are bad enough," said Howard Mosher, president and chief executive officer of Rolls-Royce Motor Cars Inc.

Things are pretty bad, even for millionaires.

"The economy's really been down for three years, and I figure it'll take another two years to recover. I just want to survive," said Ferrari owner James Haas Jr., a builder-developer in Vincentown, N.J. He said the construction business is bad in every sector — residential and commercial, private and public.

"Survive till '95, that's the goal."

He sounds like lots of harried businessmen — until the conversation turns to the Ferrari F40 on display in his living room.

A Ferrari enthusiast in a three-Ferrari family, Haas bought the F40 last year. After waiting more than three years for the car, he's never driven it.

Haas bought the car primarily as an investment, but F40 prices have nosedived. Without saying

Toyota executive on speakers list

DETROIT — Yale Gieszl, Toyota Motor Sales U.S.A. Inc. executive vice president for sales and operations, will address the Automotive News World Congress Monday evening, Jan. 11.

Gieszl is one of 27 industry experts scheduled to speak during the 17th Automotive News World Congress, to be held Jan. 10-13 at the Westin Hotel in Detroit.

Automotive News and the University of Michigan Transportation Research Institute co-sponsor the four-day event, which includes a gala dinner Tuesday evening,

Eaton trims industry forecast

13.1 million year predicted

JOSEPH BOHN
Staff Reporter

HIGHLAND PARK, Mich. — Chrysler Corp. has reduced its estimate of U.S. calendar 1992 sales by 300,000 units, down to 13.1 million cars and trucks.

Chrysler expects to sell 1.7 million vehicles in calendar 1992, up from 1.5 million last year.

"Typically, the first year after a recession you'd be looking at a 15 percent improvement over the previous year. This year we're more in the 4 percent range," Chrysler Vice Chairman Robert Eaton said. "The recovery is much more anemic than we or the rest of the industry had been projecting." Chrysler, however, sees industry sales growing to 14.5 million units in calendar 1993.

"The ability to buy is definitely improving. The amount of debt is coming down. But the willingness to buy, the concern over the economy and jobs are enough of a psychological damper on the market that it will be a slow recovery," he said.

Eaton expects the Japanese to lose about 2 percentage points of market share in calendar 1992 and another point in 1993. But he said their setback, caused by a weak dollar that forced the Japanese to raise prices higher than domestic competitors, would be short-lived.

"The Japanese have shown themselves to be extremely resilient. The competitive pressures on us will not lessen," Eaton said.

Chrysler will be able to reduce its pension liability "dramatically" and ahead of government schedule, raise requisite operating cash, pay down its debt and fund a $17.3 billion five-year product plan if the economy keeps growing, Eaton said. But a slide in the gross national product would jeopardize those plans.

The company will sell about 115,000 vehicles overseas in 1992, including exports from the United States, Eaton said. He looks for a 10 to 15 percent yearly growth in those sales.

Eaton said Chrysler may sell its remaining 5.9 percent stake in Mitsubishi Motors Corp. but that won't jeopardize its product relationship: "We're looking at cooperative efforts out past the middle of this decade. Those will continue regardless of what happens from the standpoint of holding shares" in Mitsubishi.

He said no decision has been made regarding which product brand to drop. "We're going to let the marketplace determine that. It may well be that we'll continue to have all the brands. And it may be that ultimately one will fall out. Even if one were to fall out, we don't have any idea of what it would be," Eaton said. ■

NHTSA's new chief zeroes in on electrics

MAX GATES
Staff Reporter

WASHINGTON — The nation's new highway safety chief wants to stake out a new frontier for automotive safety: electric vehicles.

The National Highway Traffic Safety Administration will likely begin writing safety rules for alternative-fuel vehicles this fall, said Marion Blakey, who was sworn in as NHTSA administrator last week.

Blakey: battery vehicles No. 1 priority

Battery-powered electric vehicles will be a first priority. On-board compressed natural gas tanks and methanol toxicity also will get close looks, she said.

"If we're going to move forward to the next level of (fuels) technology, we have to be ready with the safety considerations. It's a real priority," Blakey said.

Blakey succeeds Jerry Curry, who resigned under fire last June. She is a career federal bureaucrat and was communications director for Transportation Secretary Andrew Card before being named acting administrator in July.

She could be out of a job if Gov. Bill Clinton defeats President Bush. In the meantime, Blakey, 44, takes over at a relatively quiet time for NHTSA.

Still, there is the occasional flash-fire, such as the recent publicity over fire hazards in 1973-87 General Motors full-sized pickups and television reports questioning the reliability of seat-belt buckles.

Blakey said NHTSA has begun a review of the tank design on pickups equipped with "side-saddle" fuel tanks, which sit outside the truck's frame. The agency expects to decide by December whether to conduct a full defect investigation.

The agency also will respond to two petitions filed by the Institute for Injury Reduction, a lawyers' group headed by Benjamin Kelley.

The petitions call for an investigation and new rules for safety-belt buckle design.

The institute, following up on a CBS report, said so-called side-release style buckles could open in a crash if struck sharply on the back.

Blakey questioned the validity of the claim.

She said those conditions aren't likely in a real-world auto crash, and NHTSA's telephone hotline has received few calls on the issue.

On corporate average fuel economy, said Blakey, "The administration's position is pretty clear: A large increase in CAFE is not in the best interests of the American public."

But the CAFE issue is likely to arise in Congress in 1993, and Blakey would like some attention given to alternative ways of regulating fuel economy. ■

Marion Blakey

Age: 44

Title: Administrator, National Highway Traffic Safety Administration

Safety experience: Assistant Secretary for Public Affairs, Department of Transportation, 1990-92

Past jobs: Career federal bureaucrat at National Endowment for Humanities, Departments of Education and Commerce, Bush White House staff.

Drives: Lincoln Continental with dual airbags and Ford Taurus wagon with driver-side airbag.

Views: "I'm struck by how much people want to talk about old issues. People ask me, 'Are you going to revisit the airbag issue?' As far as I'm concerned, the jury is in. They work. And consumers want them."

Daily sales rate dips 3.9%; even trucks feel the pinch

JIM HENRY
Staff Reporter

Car sales slipped more than usual, and truck sales gained less than usual in the next-to-last 10-day period of the 1992 model year.

The daily selling rate for cars and light trucks in the United States dipped 3.9 percent below a disappointing year-ago period. The industry sold 290,297 light vehicles in the Sept. 10-20 span. There were eight selling days this year and nine last year, so percentage comparisons in this article are on a daily-selling-rate basis.

Car sales, which were off less than 1 percent through August, fell 8.6 percent in mid-September. Unit sales totaled 181,919.

Trucks gained 5.4 percent, only half the 10.8 percent improvement trucks showed after eight months. The industry sold 108,378 light trucks, minivans and sport-utilities in the mid-September period.

General Motors sold the most trucks, 40,033, but its daily rate fell 11.1 percent. GM car-truck sales dropped 12.3 percent.

Ford Motor Co.'s daily sales rate climbed 11.3 percent. Ford sold 75,610 cars and trucks. The truck sales rate improved 12.4 percent, with 34,669 sold.

Chrysler Corp. continued a hot streak in light trucks, with daily sales up 35.5 percent. Unit sales were 22,154. *Automotive News* estimates 10-day sales for Chrysler and for most imports.

Sales for American Honda Motor Co. Inc. fell 25.1 percent, as both Acura and Honda were down.

Nissan Motor Corp. in U.S.A. rose 3.4 percent on a daily-rate basis, compared to a volume decline of 4.1 percent through eight months. Toyota Motor Sales U.S.A. Inc. climbed 12.1 percent.

NHTSA seeks Big 3 aid for GM fuel tank inquiry

MAX GATES and HELEN KAHN
Staff Reporters

WASHINGTON — Federal safety officials have requested a long list of records from each of the Big 3 as they probe for alleged safety defects in General Motors "side-saddle" gas tanks.

The National Highway Traffic Safety Administration is calling the charges against the GM full-sized pickups more serious than typical consumer complaints.

"We have an allegation (of) a fairly large casualty toll," said William Boehly, associate administrator for enforcement at the National Highway Traffic Safety Administration.

The Center for Auto Safety has charged that as many as 300 people have died in fires or explosions involving side-impact accidents in 1973-87 Chevrolet and GMC R/V pickups. Gas tanks on the trucks were mounted outside the frame rails.

The center has asked NHTSA for a full defect investigation. The agency has until Dec. 12 to decide whether it will proceed.

In the meantime, NHTSA will review state and national accident and casualty data to see if fires or fatalities occur more often in GM trucks than in other models. And federal engineers may conduct their own crash tests to see how the tanks perform in side-impact collisions, said Boehly.

They also will review lawsuits filed against GM to see if court records contain engineering information about the design and performance of the tanks.

Some critical information could be made public Oct. 15, when Joan Claybrook, president of Public Citizen, testifies in a Texas case. She is expected to release settlement data from nearly two dozen side-saddle suits.

The consumer advocacy group wants 96th District Court Judge Jeff Walker to release data about the truck design that was sealed after a settlement last March. That case involved the 1989 death of Francis Zelenuk, who died after his 1987 pickup caught fire after it was struck by another vehicle.

In late August, NHTSA enforcement staff wrote each of the Big 3 requesting information on their pickup trucks from the 1970-89 model years.

"As far as we know, Ford and Chrysler don't have saddle tanks," Boehly said, but NHTSA wants information for comparison with the GM trucks.

NHTSA also asked for each company's "opinion of the crashworthiness of light trucks with fuel tanks located outside the main frame rails."

In addition, GM engineers were asked to: explain why the company switched from the in-cab fuel tank design used on its pickups from 1949 through 1972; give descriptions of alternative tank designs considered by GM and the reasons for not using them; and provide details of the employment history of Ronald Elwell, a former GM engineer who has testified for the company in lawsuits over the fuel-tank design.

Elwell says he subjected himself to possible criminal sanctions because he did not know, he alleges, that GM had done tests showing that side impacts caused the large pickups to rupture. He says GM concealed the data from him.

A Detroit court has barred Elwell from talking about the pickups. But GM says Elwell has already breached it by talking to an ABC-TV reporter in Texas.

> NHTSA also asked for each Big 3 company's "opinion of the crashworthiness of light trucks with fuel tanks located outside the main frame rails."

Toyota leads for No. 3

Model year race goes to the wire

JIM HENRY
Staff Reporter

The auto industry's semiannual sales scorekeeping ends Wednesday, the last day of the 1992 model year. Toyota Motor Sales U.S.A. Inc. is poised to become No. 3 in car sales, edging out a slipping American Honda Motor Co. Inc.

With one 10-day report left, Toyota and Lexus were 2,323 cars ahead of Honda and Acura. Toyota finished the 1991 model year about 73,000 units behind Honda. General Motors will be No. 1, and Ford Motor Co. No. 2.

Before 1988, Toyota perennially outsold Honda in cars. But Honda introduced the Acura in 1986 and outsold Toyota two years later. Toyota started its comeback when it introduced the Lexus in 1989. Toyota holds a wide lead over Honda in overall sales because it sells trucks.

While much of model year's significance has vanished with the advent of year-round car introductions, statisticians still crunch numbers on a model-year basis. For the winners, at least, the results provide another opportunity for advertising bragging rights.

Chrysler Corp. remains third overall but will fall to fifth in car sales. As of Sept. 20, Toyota and Honda each led Chrysler by nearly 100,000 cars.

Chrysler hopes to rebound in the coming year with its new line of LH sedans. A record year for minivan sales has bolstered the company's truck numbers 14.8 percent.

Some other trends for the 1992 model year, most of them based on sales through 11 months:

- The Honda Accord will keep its title as the best-selling car in the United States, but the Ford Taurus made it a lot closer. For the 1991 model year, Accord outsold Taurus by about 83,000 units. As of the end of August, the margin was 38,558. The Accord built the bulk of its lead in the last six months.
- Trucks dominated a flat market overall. Truck sales, led by increases at each of the Big 3, rose 6.6 percent for the 11 months, while car sales decreased 2.8 percent. Combined car and truck sales gained a bare 0.3 percent. Trucks made up 35.3 percent of the light-vehicle market, compared with 33.2 percent a year earlier.
- The Dodge Caravan minivan broke into the Top 10 vehicle sellers, as sales grew 15.7 percent from the year-ago period to 215,764. Combining Caravan with Voyager and Town & Country, Chrysler sold 408,285 passenger minivans.
- The Ford F-series pickup repeated as the best-selling vehicle. With 438,484 after 11 months, it led the Chevrolet C/K pickup by about 15,000 units. Last year at the same time, Ford was ahead by only 1,476 in a hotly contested race.
- The Ford Explorer roared up the charts from No. 9 to No. 5, with sales up 19.9 percent. The Chevrolet Cavalier, which was fifth at the end of the 1991 model year, fell out of the Top 10 through August, as sales dropped 25.1 percent. The Honda Civic also fell off the select list. Cavalier and Civic were replaced by the Dodge Caravan and the Chevrolet Lumina.

Automakers will announce model year results Oct. 5.

Chrysler team checks minivans every 2 weeks

JOSEPH BOHN
Staff Reporter

AUBURN HILLS, Mich. — As linchpins of the company's profitability, Chrysler Corp. minivans are scrutinized by a platform team every two weeks.

Chrysler owns half of the minivan market and will take whatever steps necessary to keep it.

Annual sales are more than 500,000 units, and a big chunk of Chrysler's income is riding on the success of the Plymouth Voyager, Dodge Caravan and Chrysler Town & Country minivans.

At the platform team's most recent meeting, which *Automotive News* and other media were invited to attend, one by one, members discussed subjects ranging from exports and sales to days' supply and quality. Joe Casola, Chrysler manager of business planning and marketing strategies, set the tone for what turned out to be a very upbeat meeting:

- The automaker's U.S. minivan sales are up 18 percent for the Oct. 1, 1991, to Aug. 30, 1992, period. The company sold 408,000 minivans during that period and boosted market share 4 percentage points, Casola said.

Chrysler has single-handedly expanded the segment, he said. Its sales increased 62,000 units during that period; the segment's sales were up only 52,000.

"We were the segment increase and then some," Casola told the group, calling attention to an 8 percent industry increase to 810,000 sales during the period.

- Chrysler is expected to have only 11,000 of its 1992 minivans (16 days' supply) in dealer inventories on Oct. 1. That means most of the minivan inventory in dealers' hands will be "fresh stuff," about 75,000 of the 1993 models, Casola said.
- Chrysler is predicting a 38 percent increase in U.S. minivan sales for the last four months of calendar 1992. Casola said that is realistic, in view of a 35 percent sales hike in the first 16 days of September.

He reported that a marketing program in California helped boost Chrysler's minivan share from 33.6 percent in January to 46.0 percent by the end of July.

Chrysler is offering stronger incentives along with heavy advertising support.

- Ralph Sarotte, Chrysler director of international marketing and program planning, told the team that the European Commission may torpedo plans for a second minivan shift at the automaker's joint venture plant in Graz, Austria.

The European Commission ruled that the $140 million subsidy Austria gave Chrysler to build its plant far exceeded the EC's 8 percent ceiling on such state aid. It told Austria it must get back the difference from Chrysler, $106.6 million, or 10 percent duties will be imposed on Eurostar exports to the European Community countries.

The second shift was expected to start in January. Chrysler must decide soon if it should cancel the shift and ship units from the United States, which would add a 10 percent import duty to their price.

- Joe Mollahan, Chrysler's acting general manager of minivan platform assembly, is pleased with programs to improve minivan quality: 98 out of 108 complaints were investigated and resolved this year, and five major changes are being implemented to improve quality in 1993.

The plant validation is working particularly well, Mollahan said. Minivans are randomly test-driven before they leave the plant, and errors are corrected before the vehicles reach dealerships. For example, he said the Windsor, Ontario, plant recently picked up a "slight chuckling" noise in the front-end strut of a minivan. It resulted in 47 vans being repaired before they were shipped.

The morning meetings of the minivan platform team usually last about an hour. Tom Gale, Chrysler vice president of design and general manager of the team, presides. The 18 core members of the team are department heads representing all functions within the company.

About 16 or 17 of the core members usually attend every meeting. If they can't make it, their designated alternate attends.

It is not the kind of meeting the players can afford to miss. As Marketing Vice President John Damoose notes, Chrysler is calling itself "the Minivan Company" in ads for the 1993 model year.

The new LH models are important. But for the foreseeable future, minivans will continue to pay most of Chrysler's bills.

Ford's Louisville plant is top producer

ANNE E. WRIGHT
Chief Statistician

Ford Motor Co.'s Louisville, Ky., truck plant wins the model year production championship for the second consecutive year.

The plant produced more vehicles than any other car or truck facility in the United States or Canada. The 1992 Ford Rangers, Ford Explorers and Mazda Navajos were assembled from July 1991 through August 1992, a 14-month model year due to the increased demand for the Ford Explorer. Model-year sales for the Explorer were up 19.9 percent through August.

In the 1992 model year, car production in the United States and Canada dropped 2.2 percent from 1991. Truck production was up 3.25 percent.

Total 1992-model production in the United States and Canada was 11,210,399 cars and trucks, 60,651 units above the 11,149,748 built in the 1991 model year.

Model-year production figures are reported by the manufacturers to *Automotive News* and reflect the total number of 1992 vehicles produced. There is no set time period, as there is in the model year for sales. In production, the

EXOTICS

Recession hammers buyers, dealers

continued from PAGE 3

Lamborghini imported only 66 Diablos for the 1992 model year, compared with 110 sales in 1991.

what he paid, Haas said F40s are now selling for $475,000 to $550,000. That's above the $423,000 sticker price, but it's half of what some early buyers paid.

"If the economy comes back — if — I speculate the F40 will be back to $1 million, maybe $1.2 million," he said. Ferrari imported only about 200 F40s, and the last one arrived in August. The exact number is a matter of dispute, because it affects the scarcity. But Ferrari isn't building more, so Haas felt the investment was justified.

Exotic cars also are being challenged by the rising prices of relatively "mass-produced" cars.

Mercedes-Benz of North America Inc. broke the $100,000 barrier with the 1992 600SEL, at $127,000 suggested retail. Mercedes should come close to its sales target of 1,000 for the model year, probably stealing some sales from competitors such as Rolls-Royce. The Porsche 911 Turbo, with gas-guzzler tax, now lists for more than $100,000.

"It would be foolish for me to say the 600SEL hasn't had an impact on a very small part of the market," Rolls-Royce's Mosher said. Mercedes is selling an average of 80 of them a month, more than Rolls-Royce's entire volume.

As a group, Ferrari, Lamborghini and Rolls-Royce sold fewer than 1,400 cars in 1991. That's more than 40 percent below 1990 and about 45 percent below the all-time high in 1988. Rolls-Royce sales are up more than 10 percent this year, but Ferrari and Lamborghini have continued to slide. Ferrari is down about 20 percent, and Lamborghini about 40 percent.

Tiny Aston-Martin Lagonda of North America Inc. is selling only about three dozen cars a year, half its annual U.S. total in the late 1980s. Those four importers had a total of 121 U.S. dealers at the beginning of this year, down only slightly from 123 a year earlier. Almost none are exclusive, which has enabled dealers to rely on other franchises.

TOO MANY TAXES

What's different about this recession?

■ The government doubled gas-guzzler taxes in 1991. The penalty is $4,500 on a Ferrari 512-TR, which already costs $189,500 suggested retail.

■ The luxury tax, adopted at the same time, is a real deal-killer in this price range. The tax, 10 percent on the amount over $30,000, would be $14,300 on a 1992 Rolls-Royce Silver Spur II at suggested retail. Mosher said most buyers still bitterly resent the tax.

■ Consumer confidence — or what Mosher called "the affluent equivalent of consumer confidence" — is low. This has been more of a white-collar recession than previous downturns, as industries such as the auto industry shed managers and executives to become "lean."

Wall Street cut thousands of jobs following the 1987 stock market crash. It's also a presidential election year, and that has focused a lot of attention on economic problems.

■ In the early 1990s, conspicuous consumption is unfashionable.

"There's no shortage of money; there never is," said Martin Bennett, owner of Thoroughbred Motorcars (Ferrari-Jaguar-Saab) in Nashville, Tenn.

"The prevailing mood in the country dictates whether people will spend it, and right now it's distasteful, for whatever reason, to spend it on luxury cars. People are supposed to be saving, or prudent or conservative, or at least appear to be. It's not that they can't afford them."

Mosher said most buyers in the $100,000-and-up range are self-employed, self-made men. They're cutting expenses, laying people off and seeing their own incomes erode.

They still have money, but it's tough to justify a six-figure price tag, especially when it's for a sports car that can barely carry an overnight bag.

ENCOURAGING SIGNS

Still, there are some encouraging signs in the automotive stratosphere.

Ferrari says more than 95 percent of its customers still pay cash. As noted, Ferrari sold out the F40 for 1991, even if resale values have fallen.

Lamborghini USA Inc. introduced the Diablo in 1991, replacing the 15-year-old Countach. The Diablo's price was $239,000 compared with $145,000 for the Countach, but Lamborghini still managed to sell 110 in the 1991 model year, compared with 156 Countachs in 1990. Sales for the 1992 model year through mid-September were 66.

Rolls-Royce sold out the 1993 Bentley Continental R, at $261,800 suggested retail, before the first car arrived. Fewer than 100 will be imported. ■

Speculators desert Ferrari showrooms

Maker welcomes enthusiasts back

JIM HENRY
Staff Reporter

ENGLEWOOD CLIFFS, N.J. — The bubble has burst at Ferrari North America Inc., but new President Gian Luigi Longinotti Buitoni says he's not sorry.

"Some very good customers had to pay a premium — or else not get the car. The intelligent ones didn't" buy, he said.

Before the recession, speculators drove the price of Ferraris so high that you could sell a new Testarossa, sight unseen, for about $300,000, or twice the retail price.

Why not? After all, it would be worth 30 or 40 percent more in two or three years.

Ferrari didn't profit directly, but the skyrocketing showroom prices allowed the company to hike the 1990 Testarossa, for instance, more than $20,000 to $161,600.

Then came the recession, the luxury tax and doubled gas-guzzler taxes. Fewer people decided they really needed a Ferrari. U.S. sales fell from about 960 in 1990 to 801 in 1991. Sales through June this year were 311.

The same Ferrari that commanded a 100 percent premium a few years ago might now be worth 30 percent less than what the buyer paid. That is still a terrific residual value, but it's moving in the wrong direction. That has some customers unhappy.

When the F40 was introduced in 1991, the suggested retail was $423,000. But prices as high as $1.4 million were quoted.

Then prices softened, said Martin Bennett, owner of Thoroughbred Motorcars (Ferrari-Jaguar-Saab), in Nashville, Tenn.

He said several lawsuits were filed when customers tried to get out of contracts to buy at "extremely high" prices. Bennett said he sold two F40s, and he settled one such case out of court.

"I still made a very considerable amount of money, but not what the guy had contracted to pay me," he said.

Today, he said, "any Ferrari dealer would be grateful to sell anything at sticker price."

It'll be nice selling Ferraris to people who might actually drive the cars, said Buitoni, who took over Aug. 1.

He said American owners average only 4,000 miles a year in their Ferraris, and some used 1988 models have as few as 120 miles on them.

"It's different selling to speculators who have no interest, really, in the car," Buitoni said. "In the crazy years, you could just sell a car on the phone.

"We want customers to try the car, so they can enjoy it. We want people to take a 600-mile drive and be upset when they arrive — because it means they have to get out of the car," he said.

Hugh Steward, director of marketing and sales at Ferrari North America, admitted that profits are "tighter" than they used to be. But Buitoni insisted Ferrari has always been profitable — "very profitable" — in the United States.

"One of the things we really want to do is not to chase numbers. We are very flexible; our break-even is very low," he said.

"As a matter of fact, we are trying to reduce the number of cars. And we are not that far off last year. One of the strengths of Ferrari is we don't *have* to sell cars." ■

Japanese penetration of Europe heads changes in store for world auto markets

The world's auto markets have taken a spectacular tumble in the 1990s, with massive financial losses by the Big 3, shrinking corporate profits in Japan, mergers, buyouts, massive job losses and a pervasive crisis in morale. This article by Marketing Systems GmbH, a European-based international marketing and forecasting firm, examines the future from the European perspective.

Annual growth of worldwide new car sales will continue at just above 2 percent during the rest of the decade, with a year of 43 million-plus sales by 2000.

The competitive situation will remain characterized by expansionist aims of Japanese automakers, although they are switching from an aggressive, volume-oriented strategy to one of qualitative growth and global cooperation.

By year 2000, the Japanese are on line to reach market shares of 20 percent in Western Europe and 40 percent in North America, while maintaining their 70 percent stake in Asia.

As the 1980s ended, Western Europe became the world's largest market, with annual sales topping 13 million cars. The opening of Eastern Europe can only mean bigger things ahead.

However, 1990 and 1991 saw sales stagnate in Europe, mainly due to markets in Spain and Great Britain. More serious losses this year were averted by positive effects of Germany's reunification.

While a European economic recovery is expected before too long, annual car-sales growth from 1990 to 2000 will be only about half the 3 percent rate marked up from 1980 to 1990.

Indeed, the West European car market is on the brink of saturation, with remaining growth expected to be grabbed off by the Japanese and, to a lesser extent, new producers from countries such as South Korea.

The European Community has set a limit of 1.2 million direct imports of Japanese vehicles annually to 1999. But additional Japanese transplant production will boost Japanese manufacturers' market share in Western Europe from the current 11 percent to 18 in 2000.

Competitive pressures will be especially severe in Spain, Italy and France, whose doors until now have been virtually closed to the Japanese. But all European automakers will find themselves at a disadvantage against the efficient lean-production systems and low manufacturing costs of Japanese transplants.

European automakers have taken their time reacting to the Japanese. Only now, it seems, is Europe taking a cue from America's Big 3 to streamline organizations, rationalize plants, cut work forces, improve their supplier base and adopt proven Japanese manufacturing practices.

Meantime, the traditionally strong inclination of West European automakers to concentrate on their domestic markets has limited their opportunities abroad. For example, overseas sales by Germany's auto industry totaled 390,000 units in 1991 compared to 490,000 in 1980. During the same period, French makers' exports dropped 29 percent, Italian manufacturers' exports dipped 76 percent and British makers had a 41 percent decrease.

And while European companies made headway in Japan's domestic market in the late 1980s, only minor growth at best is expected in the foreseeable future. The current level of 4 percent imported car sales in Japan will double in the next five years, but it will primarily favor units imported from Japanese transplant operations abroad. By cooperative ventures (Volkswagen and Toyota, Opel and Yanase) and by establishing their own distribution networks in Japan, the Europeans are trying to expand their market position. But the Japanese are strengthening their stance in the upper-market niche, traditionally dominated by European imports.

The Pacific Basin — the market with the greatest growth rates the last few years (15 to 20 percent) — is ruled more or less by the Japanese, except for a few projects such as Volkswagen's in China.

Neither have European manufacturers had much luck in North America recently. Europeans got caught in the struggle between the Big 3 and Japanese transplants, which has greatly harmed Saab, Volvo and Porsche.

The depressed North American car market with muted prospects for growth spell continued competitive pressures for West European automakers. Not only will they find tough sledding in North America, but Europe becomes an inviting target for North Americans. Unable to compensate for their market-share losses at home with export boosts to Asia, the Big 3 will turn increasingly to Western Europe, both directly and via their European subsidiaries.

In 1991 the Japanese took 30 percent of the U.S. and Canadian market, which was down overall 11 percent from 1990. Japanese transplants accounted for 17 percent of 1991 sales. That will grow to 20 percent in 1995, as Japanese imports decline, according to a forecast by Vernon Lacy of Strategic Marketing Systems Inc.

Meantime, BMW AG's announced plant-construction plans in South Carolina, with initial production of 30,000 and eventual production of 70,000 cars based on the 3 series for sale throughout the world, is seen as a sign that Europeans may be rethinking their cautious approach to vehicle manufacture in North America.

For now, however, Western Europe's automakers are concentrating on opening East European markets, which is seen as their greatest challenge and opportunity. Millions will be invested there up to the year 2000, mostly by West European manufacturers, in a market expected to double its level of demand to well above 3 million cars annually by the turn of the century. Even in the medium term, markets such as Poland and Hungary will show growth which, although perhaps not as rapidly as East Germany, will nonetheless be of considerable proportions.

Those aspirations also seem justified for the long-term, with car density in Eastern Europe ay 80 cars per 1,000 inhabitants and expected progressive opening of political and economic fronts.

On the other hand, given the backdrop of national unrest in Eastern Europe, losses in purchasing power arising from the restructuring process and the heavy question mark looming over the former Soviet Union, Western Europe's hopes are doused with caution.

North Americans, Japanese and Koreans are eager to claim their share of the Eastern European bounty. Expansion of those markets will be closely linked to general economic and political commitments.

Still and all, the hunt is on in Eastern Europe, attracting companies intent on strengthening their competitive positions. So far, Volkswagen has been the most aggressive, but the Renault-Volvo linkup and many other strategic alliances can't be ignored. Even in these tough times, the big-is-better mentality (for geographic expansion or widening the product line) is strong enough for Western European automakers to go for broke in the the worldwide competitive stakes. ☐

Marketing Systems GmbH is represented in the United States by Strategic Marketing Systems Inc. of Farmington Hills, Mich.

CHEVY

New products on the horizon

continued from PAGE 3

ness is "an expensive solution to absorbing excess production capacity," but it also made it impossible for the manufacturer to keep track of the customers who were buying the nearly new cars.

He said GM stayed in the program car business to save market share, but the program cars also helped save a lot of GM dealers.

Perkins' industry sales forecast for trucks in the 1993 model year is 4.7 million to 5.1 million units, a growth rate of about 8.8 percent.

Chevrolet may sell an additional 73,000 trucks in the 1993 model year, up about 4 percent, he said.

Perkins said he is concerned that negotiations with the UAW might adversely affect the predictions. The Big 3 contracts with the UAW expire Sept. 14, 1993.

Also, Perkins noted that the CAMI Automotive Inc. plant in Ingersoll, Ontario, where the Geo Metro and Tracker are built, is on strike. CAMI Automotive is a joint venture between GM and Suzuki Motor Co. Ltd.

Further, the new Camaro, which may be badged as a 1994 model when it is introduced in the middle of the 1993 model year, won't be available in volume until early spring 1993.

Perkins said 1993 marks the beginning of a five-year period of Chevrolet new-model introductions, starting with the new Geo Prizm. During that period, he said, the division's image will be redefined.

He spoke enthusiastically about the success of the Geo line, which is entering its fifth model year after selling 1 million cars and trucks.

"For those of you who think Chevy doesn't take chances, how 'bout in your face with a million Geos," Perkins crowed.

He said that no Geos will be sold into daily rental fleets in the 1993 model year, which means all of the 72,000 Geo Prizms Chevrolet expects to sell will be retail.

Although Chevrolet is not ready to follow Ford Motor Co. and Saturn into so-called one-price selling, it is moving away from incentive programs and toward lower prices. AN

Chevy pushes value image

MARY CONNELLY
Staff Reporter

In the 1993 model year, Chevrolet will try to cast itself as America's premier value brand.

The division will use national print and TV campaigns to tout pricing on two critical, high-volume car lines. Prices for the 1993 Lumina are unchanged from 1992 on all but base two-door models, which have more standard equipment. The sticker prices on the Cavalier coupe, sedan and wagon, depending on model, are up to $579 lower than the 1992 model.

Chevrolet said the redesigned 1993 Geo Prizm will carry a $9,995 sticker price, which is $130 less than the 1992 model.

"We have to be America's value leader," said Chevrolet General Manager Jim Perkins. Chevrolet is on the threshold of a five-year product and image "renaissance," Perkins said.

The goal is to meet increasing consumer demand for good value.

Noted Jeff Hurlbert, Chevrolet general marketing manager, "The 1993 car campaign sets the course for a new definition at Chevrolet. That definition is, 'Nobody cares more for me than Chevrolet because nobody gives me more for the money than Chevrolet.' "

Chevrolet will continue its "Heartbeat of America" theme in 1993. But Hurlbert said ad messages will focus more strongly on "quality, reliability, durability and, most importantly, value."

Chevrolet will continue its "Like a Rock" truck campaign. AN

*New model for 1993

Mitsubishi, Honda, Hyundai increase prices on most '93s

JOHN K. TEAHEN JR.
Senior Editor

Mitsubishi Motor Sales of America Inc. has added expensive equipment to some of its big-ticket cars and has tacked on the biggest price hike of the Japanese-badged cars in this country.

Automotive News estimates the increase at $1,005, or 6.1 percent, before adjusting for year-to-year equipment changes. The company did not place a figure on the boost because some of its 1993 models have not yet been priced.

Among Japanese-badged cars, increases on 1993 models have ranged from 1.4 percent to 2.9 percent for Nissan, Infiniti, Honda, Acura, Toyota, Lexus and Mazda. Those percentages are figured after adjusting for equipment changes. Mitsubishi's 6.1 percent hike will drop when similar adjustments are made.

Major equipment additions for 1993 include anti-lock brakes ($943) on the Eclipse GSX Turbo with all-wheel drive; keyless entry system on the Diamante LS and 3000GT VR-4; and air conditioning and power windows and door locks on the base 3000GT.

Also, the Mirage subcompacts are new for 1993 and higher priced than the 1992 entries. Mitsubishi's biggest hikes are $3,100 on the 3000GT VR-4 and $3,400 on the Diamante LS.

Price hikes by Honda Division of American Honda Motor Co. Inc. are easy to summarize. Civics are up $250 to $300; Prelude coupes and Accord sedans and coupes are up $450; and Accord wagons are up $250. Exception: The Civic EX sedan rose $1,325 because air conditioning and a stereo system now are standard. The average increase is $482, or 2.7 percent.

Hyundai's changes cover a broader spectrum. An Excel sedan and an Elantra sedan rose only $4 while base Sonata sedans climbed $1,249. The Sonata GLS sedans were reduced $196. Other Hyundais went up $100 to $300. Hyundai Motor America said its 1993 cars are up 2 percent, which *Automotive News* estimates at $200. AN

Acura sets up national dealer ad group

KRISTINE STIVEN BREESE
Staff Reporter

LOS ANGELES — With sales down and dealer dissatisfaction on the rise, American Honda Motor Co.'s Acura Division has set up a national dealer advertising association. Acura says the group will bring much-needed consistency to its image.

The new program will replace the current 34 associations.

Acura's ad agency, Ketchum Advertising L.A., now will handle all regional advertising as well as the national ads.

In addition to projecting a more consistent image, the program will enable more dealers to be involved in advertising planning. Acura says 32 percent of its dealers are not members of any association.

"We had 34 associations working with 26 agencies and what they thought Acura was," said Thomas Elliott, executive vice president of American Honda. "So it's going to be a lot cleaner."

There are competitive pressures as well. Both Lexus and Infiniti, which have moved in on Acura's turf, handle advertising that way.

Acura will assess dealers 1 percent of invoice for every vehicle sold and will match that with an 0.85 percent contribution of its own. The money will be used to buy ads in the market in which the funds were generated. Acura will provide ads for the zone groups to choose from each quarter.

Some dealers are wary of the change. One dealer claimed the trend toward abolishing autonomous regional ad groups takes money away from the localized promotions dealers need most.

The dealer said Acura's move is similar to one Mazda made this summer. He said companies do it to cut costs and increase control.

"Sure, they'll put the money back into our market, but it will be in the form of spot TV buys like they were already making. This just means that they're reducing their own spot TV costs," said a dealer who is president of his local ad association. That group will be abolished when the new program takes effect. Jan. 1. The dealer asked to remain anonymous.

Acura sales were down 13.3 percent through the first eight months of this year, and many dealers have blamed Ketchum for not creating the right advertising messages.

Some expressed surprise that the agency is going to become more involved with the account.

But all dealers interviewed for this report agreed that Acura must communicate its identity in the marketplace better, especially vis-a-vis Lexus and Infiniti. AN

HONDA

continued from PAGE 3

ters to work on them.

Honda division sales were down 3.9 percent through the end of August. That's not bad, Elliott said, given the weak overall U.S. car market and the absence of the Honda Civic CRX and Civic wagon during the 1992 model year.

Next year, Accord sales will drop to 360,000 or 370,000 units from a projected 390,000 in 1992, in part because of the changeover to a redesigned Accord and because of an anticipated decrease in demand during the last year of the product cycle.

The company will offer an Accord value package next spring, probably based on the LX model, to help spring sales.

Marketing will tie the value package to celebration of this fall's 10th anniversary of Honda car production in the United States.

Honda also will offer a nationally advertised monthly base lease of $199 for a 1993 Accord LX sedan with five-speed manual transmission.

The term is 60 months with a $500 down payment. The program runs from Oct. 1 through end of November.

Lease terms can be shortened to 24, 36 or 48 months by paying higher rates, according to preliminary information given to dealers. AN

Staff Reporters Richard Johnson in Tokyo and Mary Connelly contributed to this report.

NO RISK
NO RECOURSE
NO KIDDING

Introducing An Alternative Financing Source That Increases Profits and Adds Cars To Your Lot Inventory.

Alternative financing is as easy as NAC. Enroll in our Dealer Acceptance Program and convert marginal credit opportunities into cash profits, without risk . . . without recourse. Enrolled dealers can qualify for a line of credit up to $150,000.

Not only does National Auto Credit help you sell your cars to marginal credit customers, we give you more cars to sell. When you enroll in our non-conventional finance program, we'll put up to 5 late-model, quality vehicles on your lot at absolutely no cost. It's called the Program Car Benefit, and you won't find it anywhere else but NAC.

Imagine the impact on your bottom line when you begin converting bank turndowns into cash sales . . . imagine how your lot profits would benefit from 5 more cars that cost you nothing.

Call or write NAC today, and find out how you can enroll in our Dealer Acceptance Program.

BUILD

Cars dip, trucks rise in model-year tally

continue[illegible]GE 8

length [illegible]odel year varies from [illegible]odel and is governed [illegible] inventories.

The Ma[illegible], Ohio, plant of Honda of America Manufacturing Inc. moved up a notch to second place.

Sales of domestically produced Accords in the first 11 months of the model year rose 1.9 percent, while imported Accords fell 34.4 percent. For the 1992 model year, 355,438 Honda Accords were assembled at Marysville, bumping General Motors' Lordstown, Ohio, car plant to third place.

In 1992, Lordstown, which produces the Chevrolet Cavalier and the Pontiac Sunbird, assembled 14.2 percent fewer vehicles than in 1991 because of a decrease in demand for both cars.

Ford's St. Thomas, Ontario, car facility rose to the fourth place because of an extended model year. Ford began production of the 1992 Ford Crown Victoria and Mercury Grand Marquis in January 1992. Total 1992 production was 315,635, up 87.9 percent over 1991.

Chrysler opened two new plants and launched two new vehicles in the 1992 model year. The New Mack Avenue. facility in Detroit began production of the Dodge Viper in December 1992. Production of the 1992 Viper is slated to end in October.

The Jefferson North assembly plant, also in Detroit, began building the Grand Cherokee in January 1992 and ended the model year in July with 36,623 units.

Chrysler's Windsor, Ontario, facility finished fifth and for the first time was joined by the St. Louis (No. 2) minivan facility in response to a 17.3 percent rise in Chrysler's minivan sales. The Windsor plant builds the Dodge Caravan, the Dodge Caravan C/V and the Plymouth Voyager. It produced 286,891 units, up 27.7 percent over 1991. The St. Louis (No. 2) facility built 240,188 minivans in 1992, a gain of 42.1 percent over 1991. ■

BOHN

Porsche replaces top boss Arno Bohn

continued from PAGE 1

In February, after a bitter, public battle with the board, Bohn won a contract that runs through 1995. There was no indication last week of how the contract affected Bohn's departure.

Bohn left Porsche Sept. 25, the day of the announced change, although he was officially to have departed Sept. 30. In a two paragraph statement, Porsche said he left by mutual agreement because of differences of opinion over business policy.

Wiedeking worked at Porsche from 1983 to 1988 and was responsible for special tasks, including construction of the new paint shop and body shop.

He left the company to become a director at Glyco AG, a supplier, and returned to Porsche Oct. 1, 1991, to head production and materials.

According to sources, Porsche sales for the fiscal year ended July 31, plummeted to 18,500 vehicles compared with about 22,000 a year earlier.

Porsche also produced 4,100 of the 500E models for Mercedes-Benz. Bohn had predicted Porsche would break even building 21,000 vehicles.

For the first half of the fiscal year, Porsche earnings fell 97 percent to $1.3 million.

Analysts said Bohn is being blamed for Porsche's financial ills, perhaps unfairly.

"You just have to look around the rest of the luxury market, and it's obvious that none of the manufacturers are in a better state. It is difficult to call the problem at Porsche a management failure," said John Lawson at DRI/Europe in London.

The fate of the new Porsche roadster that Bohn spearheaded is unknown. To bolster sales of the year-old 968 in Europe, Porsche will introduce a $52,000 version in October, $8,000 less than others.

Porsche said the company is content with the car's performance in the United States.

"We hope the car will attract interest in Europe; for the first time in three years, we will have a car for less" than $54,000, said a Porsche spokesman.

Bohn, 45, joined Porsche on Jan. 1, 1990, and was named chief executive on March 1, 1990. Seven months ago, the supervisory board declined to renew Bohn's contract and tried to lure Wolfgang Reitzle, BMW research and development chief, to the helm. Reitzle turned the board down.

Bohn mustered union and employee support, threatened to resign and won a three-year renewal of his contract on Feb. 25.

Sources say the contract is worth more than $650,000.

Confident of the labor support behind him — which makes up half of the supervisory board — Bohn boldly suggested the Porsche and Piech families reduce their membership on the board.

Ferdinand Piech, the new chairman of Volkswagen AG, is a member of the Porsche board, and reportedly he personally tried to recruit Reitzle. ■

GM, Ford spin new web of rebates

JENNIFER HEIL
Special Correspondent

incentive
WATCH

General Motors and **Ford Motor Co.** have new incentive programs to replace the rebates that expired Sept. 23.

Customer incentives for the 1992 and 1993 **Buick** Park Avenue, Park Avenue Ultra and Riviera now range from $750 to $1,500 and expire Jan. 24. Buick had offered rebates on those models ranging from $750 to $1,000 on 1993s and from $1,000 to $2,000 on 1992s.

GMC Truck announced rebates of $300 to $1,000 on 1993 models. Excluding the $1,000 rebate on the 1992 G Van with the YF7 option package, all incentives on 1992 GMC models have expired. Current 1992 and 1993 rebates expire Jan. 24.

The rebate for the 1991 **Chevrolet** Geo Storm has been raised from $$750 to $1,500 and expires Jan. 24. New and continuing incentives for 1992 and 1993 models also expire Jan. 24.

Dealer incentives for Chevrolet include $1,500 for the 1993 Geo Prism and $1,000 for 1992 and 1993 Corvettes.

Oldsmobile is offering new factory-to-dealer incentives on 1992 models, but is not extending the 1992 customer rebates that expired Wednesday. Dealer incentives range from $750 to $1,000 and expire Jan. 24, 1993.

New customer rebates for 1992 **Pontiac** models expire March 31. Incentives range from $500 on the 1992 Firebird to $1,250 on the 1992 Grand Prix and Bonneville.

Cadillac rebates to buyers of 1992 models have not been extended, but Cadillac is offering a $1,500 dealer incentive on the 1992 Fleetwood, DeVille, Seville and Eldorado. It expires Oct. 31.

Ford has reduced finance rates to 5.9 percent from 7.9 in its 1992- and 1993-model programs. New and continuing customer rebates on 1992 and 1993 models expire Dec. 18. Ford did not extend customer incentives on 1991 models.

Chrysler Corp. has added 1993 minivans to its incentive package until Dec. 31. The rebate is $1,000 on long-wheelbase models in California and Hawaii and $500 in other states, and $500 on short-wheelbase models in all 50 states.

Chrysler has extended its Physically-Challenged Assistance Program for the 1993 model year. The program provides incentives for the purchase or installation of special adaptive equipment for Chrysler vehicles.

The program, which had more than 3,000 participants in the 1992 model year, provides a cash reimbursement up to $500 per vehicle for expenses incurred by the customer for as many as two new vehicles in the 1993 model year.

New **Hyundai** rebates for 1993 models range from $500 to $750. Incentives for 1992 Excels and Scoupes have been raised to $750 to $1,000; they were $500 to $750. The 1991 Excel has a $1,200 rebate. Incentives for 1992 and 1993 models expire Nov. 3, and 1991-model rebates expire Oct. 2.

GM, Suzuki get break on trade content

LINDSAY CHAPPELL
Staff Reporter

General Motors and Suzuki Motor Co. will avoid future domestic-content confrontations over their Canadian-made vehicles because of a special clause in the proposed North American Free Trade Agreement.

The pact singles out CAMI Automotive Inc. for a unique exception from tough new rules on the origin of auto components.

CAMI, an assembly joint venture between Suzuki and GM of Canada Ltd., builds up to 200,000 Geo Metros and Trackers and Suzuki Swifts and Sidekicks annually, most of them for U.S. sales.

Under the CAMI clause, all four products can be averaged together with GM's other Canadian-made vehicles to determine an average U.S.-Canada content level.

Since most of GM's products boast U.S.-Canada content levels of more than 90 percent, the averaging is certain to push CAMI safely above the new rules.

That could save both partners 2.5 percent in tariff charges when the cars enter the United States, and 25 percent in tariffs on the sport-utilities.

CAMI, along with other Japanese-associated Canadian makers, have been grappling with the U.S. Customs Service over whether their vehicles contain at least 50 percent U.S.-Canada content. If not, the vehicles do not qualify for U.S. duty-free entry.

Earlier this year, Customs told Honda of Canada Manufacturing Inc. that its Civic hatchbacks did not meet the requirement, which made Honda liable for more than $16 million in back duty payments. Honda and Canada have challenged the ruling, and no tariffs have been paid yet.

Under the new North American Free Trade Agreement rules, the content requirement will rise to 62.5 percent for Canada, the United States and Mexico, but the new method of calculation is less ambiguous than the old, and Honda Civics should have no trouble avoiding duties on passage.

The issue has been a political one for the Canadian transplants, and the group has expressed concerns over how it will comply with the proposed North American Free Trade Agreement rule.

"CAMI's content level is really close to the line," said Tayce Wakefield, director of public relations for GM of Canada. "This gives CAMI extra protection and makes sure that it doesn't get caught in any glitches."

Customs is currently auditing CAMI's vehicles to determine their U.S.-Canada content levels under the existing U.S.-Canadian Free Trade Agreement. However, whatever those findings are, they will be superceded by the NAFTA rules if the treaty is adopted.

Even then, the CAMI clause will not guarantee CAMI products entry into Mexico. Suzuki remains effectively barred from sales in Mexico under the agreement, because it doesn't manufacture in the country. And while GM can sell its CAMI versions there, the cars still will have to meet the 62.5-percent requirement on their own, without Canadian averaging.

"That's one of the things we were not real pleased about," said GM of Canada spokesman Stuart Low, "but it's a workable compromise."

GM lowers estimated 3rd-quarter production

PHIL FRAME

Staff Reporter

General Motors reduced its third-quarter North American production estimate by 79,000 units and said it would build 27,000 fewer cars and trucks in the fourth quarter this year than it did in the last three months of 1991.

Most of the third-quarter reduction — 48,000 units — was due to an Aug. 26 strike at a Lordstown, Ohio, parts plant that forced the shutdown of several assembly plants and a slowdown at others, GM said last week.

GM now estimates that production in the third quarter, which ends Wednesday, will be 897,000 cars and trucks in North America. That compares with 1,000,876 in the third quarter of 1991 and 1,197,267 in 1990's third quarter.

Fourth-quarter production this year was forecast at 1,181,000 units, down from 1,208,000 in the same period of 1991 but higher than the 1,066,447 built in the last three months of 1990.

The early release of production estimates last week was unusual.

"Based on previous figures we had given and the number of vehicles we were going to miss it by, we felt it would be important to let everybody know we were going to miss it," a GM spokesman said.

Fourth-quarter production plans reflect GM's expectation that the North American vehicle market will remain sluggish in the period.

The reduction from 1991's fourth quarter also reflects this summer's decision to end price subsidies to daily rental car companies. GM had used the subsidies to stimulate sales and maintain production and market share.

But the ensuing glut of program cars returning to the marketplace hurt residual values and exacerbated GM's losses.

Earlier this year, GM decided that turning a profit was more important than maintaining a certain market share, so the company changed its policies on production, fleet subsidies and program cars.

The policy changes mean that rental cars will remain in service longer, and that means rental car companies will be buying cars less often.

The in-service cycle for GM rental cars is expected to increase from six-to-seven months now to eight-to-nine months during 1993.

Besides affecting production, it also means that used daily rental vehicles are less likely to undermine new-vehicle sales.

U.S. AND CANADA CAR AND TRUCK PRODUCTION

Vehicles are assembled in the United States unless noted. Vehicles are cars unless noted.

Output up 10.5% for week

GWENDOLYN ZONGHETTI

Special Correspondent

With several plants working overtime, production in the United States and Canada rose 10.5 percent last week.

In the United States, makers assembled 123,289 cars, up 13.6 percent from the prior week but down 2.2 percent from the 1991 week.

For 1992 to date, U.S. makers have produced 4,167,199 cars, up 4.2 percent from last year.

U.S. truckmakers last week produced 88,878 units, up 10.4 percent over the prior week and 4.2 percent over the 1991 week.

Year-to-date, U.S. truck production is 2,969,707 a gain of 18.9 percent over 1991.

Canadian automakers last week manufactured 18,740 cars, 1.4 percent fewer than the preceding week and 27.3 percent fewer than the year-ago week.

Since the start of the year, Canadian carmakers have produced 756,766 units, down 6.5 percent from 1991.

Canadian truckmakers last week produced 18,714 units, up 5.3 percent over the preceding week but off 10.0 percent from last year.

Last week's scheduled car and truck production was shared as follows:

General Motors, 37.2 percent; Ford Motor Co., 29.1 percent; Chrysler Corp., 14.5 percent; Honda of America Manufacturing Inc., 4.4 percent; Nissan Motor Manufacturing Corp. U.S.A., 3.6; AutoAlliance International Inc., 3.0; Toyota Motor Manufacturing (U.S.A.), 2.3 percent; New United Motor Manufacturing Inc., 1.8 percent; Subaru-Isuzu Automotive Inc., 1.3 percent; Diamond-Star Motors Corp., 1.1 percent; miscellaneous, 0.9 percent; Navistar International Corp., 0.7 percent; and AM General, 0.1 percent.

General Motors has decided to continuing producing the Buick Roadmaster Estate Wagon and Chevrolet Caprice station wagon at Willow Run., Mich., until February. Wagon output, which accounts for 29 percent of the plant's production, had been scheduled to move to Arlington, Texas, this fall.

Due to inventory adjustments, General Motors' Wentzville, Mo., car plant will work one shift daily this week and next. The morning shift will work one week; the evening shift will work the other.

GM's Scarborough and Oshawa, Ontario, truck plants worked Saturday overtime last week. The Moraine, Ohio, truck plant worked daily overtime, and the Janesville, Wis., truck plant worked daily and weekend overtime.

Ford slated daily overtime last week at the Atlanta and Chicago car plants and the Kansas City, Mo.; Avon Lake, Ohio; Louisville, Ky.; and St. Louis truck plants.

Chrysler's St. Louis truck plant will work overtime this weekend.

late news

EC seeks refund of Eurostar aid

LONDON — The European Commission moved late Friday to formally seek repayment of more than $100 million in subsidies paid by Austria to Chrysler Corp.'s Eurostar plant and to impose a 10 percent import duty on every minivan produced there for sale in Europe.

The commission, executive arm of the 12-nation European Community, sent the dispute to the Council of Ministers, which is empowered to impose the penalties. In early September, the commission ruled that the $141 million subsidy given to Chrysler far exceeded EC guidelines and set a Sept. 30

Ford to define paint policy on 'F' pickups

KATHY JACKSON
Staff Reporter

Ford officials have agreed to meet with Virginia investigators this month regarding complaints that the company may be using discriminatory policies in fixing paint flaws on F-series trucks.

A.E. Hantwerker, who manages the consumer affairs investigations office for Virginia, said the Oct. 27 meeting is a result of a letter he sent to Ford Chairman Harold Poling regarding numerous calls to his office from consumers who say Ford fixes some trucks but not others.

"One of the concerns is whether there is a warranty or a non-publicized adjustment program," Hantwerker said.

Program car total to drop

Makers slate 1.2 million for '93; mileage will grow

CHARLES M. THOMAS
Staff Reporter

Although the overall program car volume is down from 1991, when it reached a peak of 1.5 million vehicles, some automakers are finding it hard to keep a pledge to dealers to make major reductions in daily rental fleets. Still, program car volume will drop to 1.2 million vehicles in the 1993 model year from 1.4 million in 1992.

Part of the dilemma for automakers stems from this summer's air fare wars, which boosted travel enormously.

Cars are staying in rental fleets longer, so they are returning to auctions from daily rental fleets with much higher mileage than before.

As a result, there is a clearer distinction between program cars and new cars, which should please dealers.

A General Motors official told members of the National Auto Auction Association meeting in Nashville, Tenn., recently that GM plans to slash 250,000 program cars from daily rental fleets in the new model year.

But if retail sales remain sluggish, automakers -- particularly GM — could backpedal and increase sales to daily rental companies to hold market share and keep factories humming.

Chrysler said it will raise its program car volume to 200,000 in the 1993 model year, up from 150,000 in the 1992 model year.

Ford Motor Co. will stay at about the same level in 1993, selling 377,000 daily rental vehicles at the auctions.

Program-car volume peaked in 1991 with an estimated 1.5 million units sold to daily rental companies and repurchased by the automakers for sale to dealers at closed auctions.

Domestic automakers keep those clean, low-mileage vehicles in daily rental fleets for six months and a minimum of 12,000 to 15,000 miles. Importers tend to keep the vehicles in fleets for fewer than 10,000 miles.

Although program cars have helped new-car dealers weather the recession, dealers have complained that program cars replaced new-

Lincoln tests new Continental design

Here's the first spy photograph of the new, larger Lincoln Continental that is expected in early 1994 as a 1995 model. The sloping grille design mimics the Mark VIII and will house the same double-overhead-camshaft 4.6-liter V-8. Insiders say upper and lower control arms will replace MacPherson struts up front to allow a lower cowl and hoodline.

Q&A

Thomas Mignanelli has spent five years trying to rebuild Nissan Motor Corp. in U.S.A., and he's frustrated by the lack of visible signs of progress. But that will change soon, he says. In an interview on Page 21, Mignanelli discusses Nissan's struggles and hopes.

Paris parade pinches pennies

Facelifts and new engines are profuse at '92 car show

DIANA T. KURYLKO
Staff Reporter

FRANKFURT — Blame it on the economy, too many firecracker prototypes at previous shows or that old standby — the engineering department.

Whatever, there is little doubt that this week's Paris auto show will be about as tantalizing as the new long hemlines the haute couture designers are touting this year.

The show, the biennial *Mondial de l'Automobile,* runs from Thursday to Oct. 18.

But there will be plenty of facelifts and new engines as makers try to breathe new life into aging or not-so-popular cars. Nothing to ooh and ahh over, of course, except the new Ferrari 456GT. But a Ferrari is like an Yves Saint Laurent gown: Few can afford the original, but it won't be long before the stylists create a cheaper copy.

In the slow race, Nissan's Micra may capture the show's "Most Significant" award. The car comes from Nissan's factory in Sunderland, England, and is one of the first fruits of the Japanese industry's looming new industrial presence in Britain.

About 130,000 of the tiny cars will flood Europe within a year — and that annual production will require only 1,600 workers. Nissan claims the Micra has 83 percent European content.

The boxy, all-new Micra moves up a notch from its predecessor to compete in an already crowded supermini segment with the Renault Clio, Rover Metro, Ford Fiesta and Volkswagen Polo. Its predecessor, which came from Japan, competed in the mini segment.

The Micra has the same exterior

Lopez denies breaking contracts

EDWARD LAPHAM
Managing Editor

WARREN, Mich. — It was his turn to talk, and General Motors' worldwide purchasing czar defended his new world order that has turned the automotive supplier community upside down.

J. Ignacio Lopez, GM vice president in charge of worldwide purchasing, met reporters last week for the first time in his new job. Speaking at the headquarters for GM's North American Operations, Lopez said emphatically that the company hasn't broken any contracts with suppliers, and won't break any.

GM's suppliers have been in an uproar for four months, claiming they were told all contracts were open and would have to be rebid.

Some suppliers have complained that GM has canceled their contracts, taken their proprietary designs and given them to other suppliers, with no regard to cost, patent rights or the supplier's ability to recoup investments.

corrections

- A Sept. 21 article on Page 16 incorrectly included the Cadillac Fleetwood among 1993 General Motors cars that will use R134a refrigerant.
- A Sept. 21 article on Page 34 incorrectly said Cummins Engine Co. was the first to certify a natural-gas heavy-duty engine in California. Tecogen Inc. of Waltham, Mass., did it Feb. 27, 1991.
- A Sept. 28 article on Page 4 incorrectly stated the loss by the parent of Rolls-Royce Motor Cars Ltd. in the first half of 1992. The correct figure is £4.3 million ($7.6 million).

JIM DUNNE/POPULAR MECHANICS

Ford contemplates Suburban fighter

Ford's on-again, off-again, full-sized sport-utility project appears to be back on the burner again. This spy photograph shows a test vehicle based on an F-150 chassis. Word is Ford has firm plans to have the vehicle ready for 1995 along with a new F series pickup. The attraction of the vehicle is its heavy-duty towing capacity and high per-vehicle profits.

deadline for repayment.

The ministers are expected to take up the dispute as early as today. If they uphold the commission, Chrysler minivans exported from Austria to the Community would be hit with a 10 percent import levy.

Although Austria is not a part of the European Community, its trade with Europe is governed by a 1972 agreement that bans subsidies which "distort competition."

— *Ed Wendt*

Chrysler prices up 2.4% for '93

DETROIT — Chrysler Corp. said last week that firm prices of its 1993 cars will be an average of 2.4 percent higher than comparably equipped 1992 models.

The increase is slightly less than the preliminary boost of 2.6 percent that Chrysler announced in July. The company did not disclose a dollar amount, but *Automotive News* estimates that the hike is $372.

Chrysler said optional equipment prices and destination charges have not been raised for 1993.

Chrysler's 2.4 percent increase compares with boosts of 0.3 percent announced by Ford Motor Co. and 1.66 percent for General Motors.

The leading Japanese makes have increased prices 1.4 percent to 2.9 percent on comparably equipped 1993 models.

M-B takes 5% of Ssangyong

FRANKFURT — Mercedes-Benz AG said last week it has agreed to acquire a 5 percent stake in Ssangyong Motor Co., a Korean truckmaker. Terms of the agreement were not disclosed.

"It is possible that our cooperation will deepen and it might develop in other areas, but this is a commercial vehicle joint project," said a Mercedes spokesman.

Under an agreement signed in March 1991, Mercedes licensed Ssangyong to produce 50,000 Mercedes light-commercial vehicles and 80,000 engines a year, beginning in 1994. Mercedes will use 50,000 of the engines for its Gelandewagen sport-utility for sale in Asian countries. Ssangyong will put the remaining 30,000 engines into a G-wagon wearing its badge for the Korean market.

Ford, Nissan recall minivans

DETROIT — Brake and seat belt problems have prompted a recall of about 5,900 1993 Mercury Villager and Nissan Quest minivans. Both vehicles are built by Ford Motor Co.

The belt recall involves inspecting and possibly tightening the bolts that secure the front automatic seat belt system tracks to the B pillar.

In the second recall, the companies said that brake master cylinders on some of the vehicles may have been improperly assembled, which could reduce brake effectiveness.

Both automakers have told their dealers to offer to pick up the vehicles to perform the repairs and offer free loaner vehicles to customers.

Ford said that only 2,000 of the 4,400 affected Mercury Villagers had been delivered to customers, with the rest in dealer inventories. About 600 of the vehicles are in Canada. Nissan said about 1,500 Quest minivans were affected.

Agnelli to quit Fiat in 1994

TURIN, Italy — Giovanni Agnelli, 71-year-old chairman of the Fiat Group, parent of Fiat Auto S.p.A., confirmed last week that he will retire on April 30, 1994.

Agnelli, grandson of Fiat's founder, joined the huge conglomerate in 1946 and was named chairman in 1966.

Agnelli declined to name a successor, but sources said his younger brother, 58-year-old Umberto, is the most likely choice.

Big 3 streamline quality audits

Supplier companies are getting relief from costly and redundant quality audits by manufacturers.

The Automotive Industry Action Group and the American Society for Quality Control, Chrysler Corp., Ford Motor Co. and General Motors sent letters to first-tier suppliers last week describing streamlined audit procedures.

The letter, signed by Thomas Stallkamp, Chrysler vice president for procurement and supply; Norman Ehlers, Ford vice president for purchasing and supply, and J. Ignacio Lopez, GM vice president in charge of worldwide purchasing, says that a quality assessment by any one of the Big 3 satisfies the requirement for a quality assessment.

Suppliers estimate that adoption of the process could save them $500 million a year.

GM recalls A-cars for seats

DETROIT — General Motors is recalling 1990-91 Buick Centurys, Pontiac 6000s, and Oldsmobile Cutlass Cieras and Cutlass Cruisers equipped with power seats because a short circuit could set the seats on fire.

A GM spokesman could not say how many of the A-body cars could be affected, nor whether any accidents or injuries resulted from the defect.

Affected cars are equipped with six-way power seats or power recliners. The wiring harness for the seats is routed so that it could be pinched or chafed on the seat frame. That could cause intermittent short circuits, which could weld the circuit breaker closed and create enough heat to produce smoke or ignite the seat cushion materials.

Daihatsu warns loss is expected

TOKYO — Daihatsu Motor Co. said last week that it expects to post a 5 billion yen ($41.6 million) pretax loss for the fiscal year ending next March 31, the first since it was listed on the stock exchange in 1949.

Daihatsu cited the severe slump in the Japanese market. Daihatsu, a mini-vehicle maker, said sales declined 10 percent to 301,722 in the first eight months of the year.

Daihatsu had forecast a 4.5 billion yen ($37.5 million) pretax profit for this fiscal year, approximately the same as last year.

briefly

Mazda plugs into star show

Why did **Mazda** Vice Chairman Norimasa Furuta choose Convergence '92 in Dearborn, Mich., to announce **Mazda's** electric-car plans? Maybe it's the stellar company at the Oct. 19-21 confab between the electronics and automotive industries. Other automaker bosses scheduled to speak are **Chrysler's** Robert Eaton, **GM's** Robert Stempel, **Toyota's** Shoichiro Toyoda and **Kia's** Kim Sun Hong.

REAL BIG BUCKS — The world's wealthiest auto folks, according to *Fortune* magazine: **BMW AG's** Johanna Quandt and family with $4 billion; **Fiat Group's** Giannini Agnelli and family, $3.3 billion; and **Hyundai's** Chung Ju-Yung and family, $2.3 billion.

MATERIALISM — Ten steel companies are getting together to battle aluminum and plastics in the automotive weight reduction program, and they've called an Oct. 16 "major news announcement" in Detroit to give details.

GM WISH LIST — Former **General Motors** Chairman James Roche, named to the Automotive Hall of Fame Oct. 1, offered a list of the most important issues facing the company: safety, minority, product quality and dealer organization. But "most important," he said, "is to stop the bleeding and make a little money."

POTATO PUNDIT — At last week's groundbreaking for **BMW's** South Carolina assembly plant, press badges were printed with the German word *"presse"* on one side. Quipped a dealer: "Dan Quayle must have made those up."

THE BUCK STOPS — You remember how **Chrysler** announced it would move its headquarters from urban Highland Park to its suburban tech center just three weeks after chairman designate Bob Eaton told journalists it wouldn't happen? Here's another twist, says an exec: "Lee Iacocca told me in December that if the company started making money, they'd build a small building out there for **Jeep**-Truck and advanced research and the headquarters staff." So far, only HQ got the nod for a move.

DIVERSIFICATION — **American Honda Motor Co.** will spend $40 million over the next decade to build and operate a residential, alternative high school for 100 Colorado students interested in community service and the environment. Plus, last week Honda showed a solar-powered canoe at a Chicago boat show.

HOUSECALLS I — **General Motors Acceptance Corp.** kicks off its 1992 Dealer Appreciation Week today, as GMAC branch managers throughout the nation start making personal visits to the 10,000 General Motors dealers to thank them for their finance and insurance business.

HOUSECALLS II — **Ford Motor Co.** officials will hit the bricks beginning in mid-November to meet real people at Rotary Clubs, schools, dealerships and supplier offices. The journey will take executives to about 130 cities, similar to a program last year. Each official, including Chairman Red Poling, will visit one or two cities.

ROYAL WHEELS — Britain's Princess Diana has returned the £74,000 **Mercedes-Benz** 500SL that she leased 10 months ago. Newspapers had a field day blasting her for the choice when the British industry is suffering a recession.

1993 EPA mileage report

▶ From Page 4i

both the Eldorado Sport Coupe, Eldorado Touring Coupe and the Seville Touring Sedan will be fitted with the corporation's flagship engine and the more robust 4T80-E four-speed automatic transaxle.

Chrysler introduced its Chrysler Concorde, Eagle Vision and Dodge Intrepid with them an optional 214-hp, 3.5-liter, 24-valve V-6. Noteworthy is that Chrysler manages to operate the engine's 12-valve heads with just a single cam per cylinder bank. The advantages are weight savings and easier packaging under the drop-away LH hoodline.

Chevrolet announced that it would build far fewer ZR-1 Corvettes in 1993. But the ones they will build will make extra ponies. Instead of 375 hp, the Corvette LT-5 double-overhead camshaft V-8 will now pump out 405 hp. The power comes from easier breathing cylinder heads and a high-flow intake manifold.

Import competitors have also been beefing up powertrain muscle. BMW will break with tradition of inline six cylinders for its large sedans and coupes. For 1993, the 7 series sedan will be powered by a 4.0-liter, 282-hp, double-overhead camshaft V-8. The current 2.5-liter inline-six used in the 3 and 5 series will get a variable valve timing system that will boost power and torque.

Mazda introduced an all-new RX-7 for 1993. It is powered by a sequentially turbocharged rotary that produces 255 hp at 6,500 rpm and redlines at 8,000 rpm. With the new engine and a strict vehicle-weight-reduction campaign, the RX-7's power-to-weight ratio was increased by 25 percent.

Honda will offer a 190-hp, 2.2.-liter VTEC-E four-cylinder in the 1993 Prelude.

Important pieces of transmission news are the addition of a four-speed automatic in the Ford Taurus SHO and the five-speed automatic in the new BMW 740i.

— Jack Keebler

Big 3 clean up with alternative fuels

There are three big environmental trends in the auto industry. The first is the greater availability of flex-fuel methanol-gasoline vehicles and natural gas-powered vehicles.

The second is the move away from ozone-depleting R-12 air conditioning systems. These are being replaced with systems charged with R-134a. It is believed that 134a will not damage the atmospheric ozone layer that protects the Earth from excessive ultraviolet radiation.

The other trend is toward plastic parts marked with coding to enable easier identification and recycling. Most new cars from domestic, European and Asian makers feature marked plastic parts.

Vehicles that operate on methanol or natural gas will be offered by several makers this year.

Chrysler is producing a full-sized van that runs on natural gas and a flexible-fueled Dodge Spirit/Plymouth Acclaim. The cars run on either unleaded gasoline or a gasoline-methanol blend of up to 85 percent methanol. Both offer full factory warranties.

Chrysler is also promising by the end of the calendar year to be the first major U.S. maker to offer an electric minivan.

In August, Chevrolet started offering specially equipped 3.1-liter V-6 Lumina sedans that can be fueled with either unleaded gasoline or a gasoline-methanol blend of up to 85-percent methanol.

GMC offers a dedicated natural-gas-powered pickup in both its two-wheel-drive Sierra 1500 and Sierra 2500 series. The division also is planning to add a dual-fuel 5.7-liter V-8 option in late 1993 for the Sierra and the full-sized Vandura/Rally van. Customers choose the fuel or combination of fuels with which they intend to operate: natural gas, propane, gasoline/propane or gasoline/natural gas.

Ford has demonstration fleets of alternative-fuels vehicles it will offer to public utilities and government pools. California dealers can take orders for up to 2,500 flex-fuel gasoline/methanol Taurus models. Canadian dealers can take orders for up to 300 units. Late this year, Ford Division will offer 10 to 15 compressed natural gas F-600 medium-duty heavy trucks powered by 7.0-liter V-8 engines. For 1993, Ford is also building 40 to 50 Crown Victoria sedans for lease customers who wish to operate on compressed natural gas.

Ford also hopes to sell 200 to 600 full-sized vans in late 1993 that operate on compressed natural gas. And finally for 1993, Ford will be the first American maker to build LPG-powered trucks that meet California's current and projected clean-air standards. Ford has modified F-600-G and F-700-G trucks for the cleaner-burning fuel.

Mazda's AZ-1 mini-coupe has gull-wing doors, a full glass canopy and goes on sale in Japan Oct. 20.

AZ-1 gives Mazda sizzle while market fizzles

RICHARD JOHNSON
Staff Reporter

TOKYO — Mazda Motor Corp. is seeking to create some excitement in the lackluster Japanese car market with its new AZ-1, a mid-engined, two-seater mini-coupe that goes on sale Oct. 20.

Based on the AZ-550 Sport concept car shown at the 1989 Tokyo Motor Show, the AZ-1 has gull-wing doors and a full glass canopy. It's powered by a turbocharged, three-cylinder, 12-valve engine developing 64 horsepower at 6,500 rpm.

The new mini will be sold through Mazda's Autozam channel in Japan and is not planned for export. Instead, it is intended to serve as an image booster at home, much like last year's pair of Japanese mini-roadsters, the Honda Beat and Suzuki Cappuccino.

Mazda clearly places great importance on the AZ-1, even though projected sales are modest. The project was headed by Toshihiko Hirai, product program manager of the MX-5 Miata.

The AZ-1 is the first Japanese car to use plastic for all outer body panels, which are attached to a steel skeleton type monocoque frame. The rear-wheel-drive minicar weighs 1,584 pounds. It is 130 inches long and rides on an 88-inch wheelbase.

Sales of the AZ-1, which is priced at 1.498 million yen($12,480), are projected at only about 800 units per month. There are about 1,000 Autozam dealers in Japan.

However, a Mazda official said the overriding mission of the AZ-1 is to generate showroom traffic and create new awareness for the Autozam network.

One of five Mazda sales channels in Japan, Autozam is expanding its line beyond minicars. Earlier this year, a Cronos/626 spin-off called the Autozam Clef was added to the product lineup.

Mazda officials say there are no plans to offer the AZ-1 in other markets, although they expect requests from dealers, especially in some European markets.

Fuji retains 'boxer' for new Impressa

RICHARD JOHNSON
Staff Reporter

MITAKA, Japan — Fuji Heavy Industries Ltd., parent company of Subaru of America, will stick with its traditional "boxer" engine design on the new Impressa subcompact to be launched this fall in Japan and in the United States early next year.

Takemasa Yamada, general manager of Fuji's engine development department, said in an interview that Nissan Motor Co., which owns 4.2 percent of Fuji, will not supply a traditional inline engine for the new car.

The boxer engine is so-named because the pistons operate in opposing motion, much like fighters trading punches.

Nissan began taking an active role in Fuji last year in a bid to curb Fuji's losses.

Subsequently, reports have circulated that Nissan would supply a conventional inline four-cylinder engine for the new Impressa, which replaces the Loyale/Leone in Japan this fall.

But Yamada said it won't happen. Instead, Fuji's existing flat-four engine family will be offered with only minor modifications because of the problems in trying to link Nissan's engine programs with those of his own company.

"It's very difficult, almost impossible," he said.

He said the complexity of engine planning by larger manufacturers like Nissan virtually precludes quick adoption of a common engine plan with Fuji.

"Just adding one car line to the Nissan engine matrix is technically very difficult. I think . . . not so practical," he said.

Furthermore, Yamada said Fuji is committed to the horizontally opposed design for the future.

"One of the merits is that it is the engine Subaru needs," he said. "The flat-four is very flexible because our different engines are produced on the same production line."

Meanwhile, he disclosed, Fuji is moving ahead with the two-stroke V-4 that was shown as a development concept at the Tokyo Motor Show in 1991.

The engine is undergoing prototype testing and could go into production by the end of the decade, Yamada said.

The 90-degree, 1.5-liter V-4 has a maximum output of 165 horsepower at 6,000 rpm.

The engine, which is being developed by Subaru Research Center, also makes use of a lean-burn combustion system that increases fuel economy.

Yamada said there are no major technical obstacles to achieving lean combustion.

"The problem is how to reduce nitrogen oxide," he said. "The easiest course is to find a suitable catalyst supplier."

EPA car mpg listings > 34i

WASHINGTON — Different versions of the Honda Civic and Geo Metro/Suzuki Swift took all top 10 places on the EPA's list of most fuel-efficient cars for 1993.

The Geo Metro XFi is the most fuel efficient car sold in the United States for the third consecutive model year, recording 53 mpg in city driving and 58 mpg on the highway. The Metro and Swift are produced by CAMI Inc., a Canadian joint venture between General Motors and Suzuki Motor Corp.

The Honda Civic hatchback VX took second with 48 mpg city and 55 mpg highway.

And Chrysler's new LH cars — the Concorde, Dodge Intrepid and Eagle Vision — were rated the highest among large cars, at 20 mpg city and 28 mpg highway.

Rolls-Royce cars with 6.8-liter engines were rated the lowest in four segments, getting about 10 mpg city and 14 to 16 mpg highway. They qualify for gas-guzzler penalties because they get less than 22.5 mpg.

The top 10 vehicles in fuel economy account for less than 2 percent of new car sales, said the Coalition for Vehicle Choice in Washington. "That's because they're small subcompacts, with manual transmission and small engines — vehicles which just don't meet the needs of most motorists," the coalition said.

Consumers are more interested in safety than in higher fuel economy, the group said. The coalition is an industry-backed group that has opposed higher CAFE standards.

The EPA statistics are issued in conjunction with the agency's emission test program. Calculation of corporate average fuel economy, or CAFE, is made at the end of the year, after final sales figures for each model are known.

Clothing designer buys 50% of TWR Racing

LONDON — Italy's Benetton S.p.A., the designer of upscale, trendy clothing for children and young adults, has acquired 50 percent of TWR Racing Ltd., one of Britain's most successful automotive engineering and racing groups.

Terms were not disclosed, but sources close to TWR put Benetton's investment at $115 million.

TWR, which includes Ford, General Motors, Mazda and Rover among its clients, produces Jaguar's XJ220 supercar. Production of the Aston-Martin Lagonda is scheduled to begin when the limited-edition run of 350 XJ220 models ends.

IRS joins FBI investigation of dealer ad fund theft

ARLENA SAWYERS
Staff Reporter

An FBI investigation of a former Bozell Inc. employee in connection with $750,000 allegedly stolen from two Chrysler-Plymouth dealer ad groups has been joined by the IRS, individuals contacted by the two government agencies said last week.

The investigation also has veered in another direction, calling into question Chrysler Corp.'s relationship with the advertising agency.

About 18 months ago, the FBI acknowledged it was investigating Joseph Haines, a former Bozell employee, in connection with more than $750,000 missing from two Chrysler-Plymouth dealer ad associations in Chrysler's Memphis, Tenn., zone.

Ed Bradberry, FBI special agent and media representative in Memphis, said last week, "no final prosecutive action has taken place."

Those familiar with the case said that among other things, the federal agencies now want to know about Chrysler Corp.'s relationship with Bozell, and whether tax or anti-trust laws are being violated.

Some dealers speculate that Chrysler acquired a financial stake in Bozell when the company was purchased by a management group from Lorimar Telepictures Corp. in 1987.

But Lou Goldfarb, Chrysler assistant general counsel, last week denied the notion and said the allegations are the "rumblings of disgruntled" Chrysler dealers in a California advertising association.

James Fieler, president of A.I.M., a Foster City, Calif., agency that handles the 40-dealer San Francisco Chrysler-Plymouth ad group, said he was contacted by the Treasury Department, the FBI and the Tennessee attorney general's office in August.

"They asked a lot of things regarding the relationship between Bozell and Chrysler," said Fieler.

Chrysler requires its dealer ad groups to use the factory-appointed agencies in order to receive matching funds from the factory.

The San Francisco group is the only Chrysler-Plymouth ad group not represented by Bozell. The group pays A.I.M. and also contributes to the Chrysler Marketing Adjustment, the fund that pays Bozell.

A source familiar with the matter said the agencies seem to be investigating why Chrysler makes it financially advantageous for dealer ad groups to use Bozell and if any federal laws are being broken.

Eugene Isaak, an attorney who represented dealers in past disputes with Chrysler, said he was contacted by the federal agencies and questioned about Chrysler's dealer advertising associations.

The ad associations that were victimized by the missing funds are the Memphis Mid-South Chrysler-Plymouth Ad Association and the Memphis Metro Chrysler-Plymouth Dealer Ad Association.

Haines left Bozell in 1990. Goldfarb said Chrysler and Bozell replaced the missing money.

PROGRAM

'93 volume to dip; mileage will grow

continued from PAGE 1

car sales in their operations.

Manufacturers responded by keeping the vehicles in fleets longer, in some cases upward of 25,000 miles.

Automakers now repurchase all the program cars bought by daily rental companies. The makers used to purchase 75 percent of the vehicles and let the rental companies dispose of the rest.

CHRYSLER CORP.

Chrysler's procedure differs slightly from those of other manufacturers. It guarantees the values of the vehicles sold to daily rental companies rather than repurchasing them.

The company's program car volume reached 240,000 in the 1991 model year.

"That was a high year and unique," said D. Wayne Snyder, Chrysler's fleet general marketing manager. "Two hundred thousand a year is where we will probably be for some time to come."

PROGRAM CAR VOLUMES

	1992	1993
Chrysler Corp.	150,000	200,000
Ford Motor Co.	377,000	377,000
General Motors	750,000	500,000
Mazda	20,000	20,000
Mitsubishi	40,000	40,000
Nissan	20,000	20,000*
Subaru	12,000	12,000
Toyota	40,000	50,000
TOTAL	**1,409,000**	**1,219,000**

*Automotive News estimate
Source: Manufacturers

Snyder said Chrysler is trimming costs from its daily rental car program by eliminating the fast-start allowance that encourages companies to order cars before Aug. 1.

Chrysler also shaved money for cooperative advertising with daily rental companies.

Chrysler Credit Corp. told daily rental companies not owned by Chrysler that they must find other financing sources to purchase Chrysler vehicles.

Chrysler owns Dollar Rent-A-Car Systems, Thrifty Rent A Car Systems Inc. and Snappy Car Rental and has just Acquired General Rent-A-Car.

"Chrysler has 1,000 LH vehicles in Florida and Colorado that eventually will return to the auctions," said Snyder. "Another 3,000 units will go to the rental agencies in November and will come back to the auctions."

In addition, the 2,000 LH vehicles recalled recently for a defective washer will be refitted and returned to the auctions for sale to dealers.

"Chrysler is in the daily rental business to stay and in the auction business to stay," said Snyder. "Earlier in the year, there was some concern that we were retrenching but we are not."

He said the volume of program cars coming to the auctions will increase during the next few months even though the mileage on the vehicles will be higher than in past years.

FORD MOTOR CO.

Tom Cunningham, manager of vehicle remarketing for Ford, said the company also plans to excise some of the costs associated with its daily rental program. Ford also has eliminated its fast-start allowances.

"The program car business is good business for manufacturers and dealers," he said. "It has helped dealers make reasonable profits and brought them through difficult times in 1991 and 1992."

Cunningham said this year's airfare wars have slowed the number of cars being sent to auctions because rental agencies are holding them longer and putting more miles on them.

Ford sold 377,000 program units in the 1991 model year, and to date this year it has returned 250,000 units to auto auctions.

"We will be reasonably close to the 1991 numbers this year, and we expect volume in 1993 will be similar," Cunningham said.

He also told auction owners that repossessions and off-lease vehicles should increase during the next few years if retail sales improve. Those vehicles are remarketed through auctions.

"Ten percent of Ford's volume is in retail leases," he said. "These are not program cars, but they are important and there is a good market for them."

GENERAL MOTORS

Ford Sims, GM's manager of redistribution, estimated 1993-model industrywide program car sales at 1.2 million and GM's at about 500,000.

"GM's strategy is to further differentiate program cars from new cars," he said. "We are putting more miles on them so they look more like used cars."

He said GM eventually will reduce its program car volume by 250,000 units.

In 1991, GM's program car volume was 700,000 units; in the 1992 model year, it increased to about 750,000.

But Sims was quick to add that it could take some time for those reductions to work their way through the system, so the company may end up paring only 125,000 program units in the 1993 model year instead of its goal of 250,000.

Like other automakers, GM is expected to cut costs by looking at options in daily rental cars, transportation costs and which auctions get the highest retention values. It has also trimmed cooperative advertising with rental car firms.

IMPORTS

John Ables, manager of administrative operations for Mitsubishi Motor Sales of America Inc., said the company expects to sell 40,000 program vehicles in 1993 — about the same as this year.

Mitsubishi dealers sell an average of about eight such units a month. The company allows dealers 45 days to pay for vehicles purchased at auctions, and it pays for air fare and hotel rooms for dealers based on the number of vehicles they buy.

Mitsubishi leases vehicles to daily rental companies. The company plans to hold fewer, but larger, auctions to cut costs and improve retention values.

David Alfonso, manager of national remarketing programs for Mazda Motor of America Inc., said Mazda expects to sell about 20,000 program cars in the 1993 model year — about the same as in 1992.

He said Mazda will use auctions to remarket repossessions and off-lease vehicles, essentially doubling the volume of vehicles sent by Mazda to the auctions during the next five years.

"We see this program as a marketing tool for dealers, not a grab for market share," he said.

John Limon, national used-vehicle remarketing manager for Toyota Motor Sales U.S.A. Inc., said the company will remarket about about 50,000 program vehicles in 1993, up from 40,000 in 1992. "Toyota will continue to use the auctions as a sole outlet for sale of program and company cars," he said.

Bob McNay, remarketing field operations manager for Nissan Motor Corp. in U.S.A., said the number of auctions Nissan uses is growing, but he declined to provide any numbers. Sources estimate Nissan's repurchase volume in the 1993 model year will be nearly 20,000 vehicles, about the same as in 1992.

Steve Wallerstein of Subaru of America Inc. said the company will repurchase 12,000 vehicles in 1992 and expects that volume to remain the same in 1993.

Chrysler buys another rental firm

Chrysler Corp. bolstered its fleet holdings with last week's acquisition of General Rent-A-Car, a Florida-based daily rental agency with a fleet of 16,000 vehicles. The purchase price was undisclosed.

The automaker acquired the daily rental car unit, which has 55 locations in 13 states, through its Dollar Rent A Car Systems Inc. The Los Angeles-based Dollar is owned by Pentastar Transportation Group, a wholly owned subsidiary of Chrysler.

Chrysler is consolidating its rental companies under Pentastar Transportation, which also includes Thrifty Rent-A-Car System Inc. and Snappy Car Rental. It will give the company a rental fleet of nearly 140,000 vehicles in North America.

General Motors, Ford Motor Co. and Mitsubishi Motor Sales of America Inc. each own or have major stakes in daily rental companies.

PAINT

Ford to explain policy on F series

continued from PAGE 1

Ford spokesman John Ochs confirmed the meeting.

He said the company has been talking with a number of states and consumer divisions about the trucks.

In June, the Center for Auto Safety charged that F-series trucks were rusting and peeling prematurely and that Ford was repainting some of the trucks under a secret warranty.

The following month, Tom Wagner, general manager of Ford's Parts and Service Division, told *Automotive News* that the company would notify the approximately two million owners of 1987-91 F-series trucks and fix all legitimate problems, paint or otherwise.

Ochs said he does not know how many paint problems the company has corrected or how many requests have been turned down. He said the company will write 200,000 F-series owners a month until all are notified.

The F-series pickup has been the best-selling vehicle in the United States for 10 straight years, and Ford dealers say they're being swamped with paint requests. Dealers say the company has authorized thousands of free paint jobs, but they also say there are no clear-cut criteria.

Some consumers get free paint jobs; some pay hundreds of dollars; some are turned down.

"My feeling is they're fixing a lot of them," a Ford dealer said. "But they're still turning down a lot, too."

Dealers say a full paint job can cost $1,800 to $2,300.

A service manager in Virginia said his paint shop is booked through next August for F-series paint jobs.

Clarence Ditlow, executive director of the Center for Auto Safety, said his office still gets complaints daily from unhappy F-series owners.

"They're not doing an adequate job of taking care of the paint problems as they said they would," Ditlow said.

Virginia passed a law last year that makes secret warranties illegal. Hantwerker said the state wants to meet with Ford officials because various sources in the state have complained that Ford may be using a secret warranty to fix the trucks in Virginia.

"We have drawn no conclusions," Hantwerker said. "This is very early in the process."

He said Ford will be represented at the meeting by Lassie Lewis, an attorney, and Frank Kerry, manager of Ford's customer support center.

Toyota dealer settles false-ad charge

Reliable Toyota has agreed to settle allegations that its advertising misrepresented a national inventory clearance.

The Springfield, Mo., dealership advertised that it was chosen for a "special sales event." The ad claimed the dealership had "exclusive Toyota factory-to-dealer incentives."

The state attorney general's office asserted that the promotion did not exist. The agency also said that the Toyota dealership did not have a special agreement with the manufacturer.

Under the settlement, Reliable Toyota will not advertise a nationwide inventory clearance unless Toyota has so ordered. In addition, the dealership agreed that when the same incentives are available to all dealerships, it will not claim exclusivity.

The company has been ordered to pay $500 to a state fund that is used to investigate and prosecute consumer fraud and has agreed to pay all court costs.

GM transfers Eighty Eight assembly

PHIL FRAME
Staff Reporter

Production of the Oldsmobile Eighty Eight at Wentzville, Mo., will be moved to a plant in Lake Orion, Mich., for the 1994 model year, General Motors confirmed.

The move will be made to balance the production at the Flint Automotive Division's three assembly plants — Lake Orion, Wentzville and Buick City in Flint, Mich., a spokeswoman said.

All three plants build about 58 cars an hour now, but the Lake Orion plant is losing production of the Cadillac DeVille to the Detroit-Hamtramck plant after the 1993 model run.

The Lake Orion plant also builds the Oldsmobile Ninety Eight.

Wentzville currently builds about 120 Eighty Eight units per day. Buick City builds about 400 Eighty Eights per day, and the Buick LeSabre.

The switch will allow for more production of the Eighty Eight and the popular Pontiac Bonneville. Wentzville is the sole source for the Bonneville.

Sales of the Bonneville were up more than 55 percent for the calendar year and model year through Sept. 20, compared with the year-ago periods.

The Lake Orion, Mich., plant will begin Eighty Eight assembly in the 1994 model year.

Sales of the Eighty Eight were up 7 percent for the model year and flat for the calendar year through Sept. 20.

Wentzville, which now builds the Bonneville, Eighty Eight and Buick Park Avenue, will be able to devote all of its 58-cars-per-hour output to the Pontiac and Buick models. The Eighty Eight is likely to take up much of the production at Lake Orion.

The plant also will assemble the redesigned 1994 Buick Riviera and Oldsmobile Aurora, the Toronado replacement. The plant will keep the Oldsmobile Ninety Eight in the new production arrangement.

The announcement also is tantamount to removing the three Flint Automotive plants, plus Hamtramck, from the list of potential plants GM might close. GM still must announce the closing of the four assembly plants.

Nissan, Hino hike truck prices

JOSEPH BOHN
Truck Editor

Two Japanese medium-duty truck importers raised 1993-model prices.

Nissan Diesel America Inc. of Irving, Texas, raised prices 4.3 to 6.5 percent depending on the model, effective Oct. 1.

The increases affect any units in the distributor's inventory as of that date, but not those in dealer inventory, according to Rick Bliss, Nissan senior vice president. They apply only to chassis and standard items. Optional equipment prices did not increase, Bliss said.

The typical Nissan UD-brand truck retails for about $25,000, including destination charges.

This is Nissan Diesel's second increase since its 1993 models bowed in April. It raised prices an average 4.7 percent then, Bliss said.

The new increases resulted from currency revaluations. The yen is now 10 percent stronger than six months ago, Bliss said.

Nissan Diesel's sales are up 34 percent for calendar 1992 through August over last year.

The company is exceeding its sales target and anticipates selling more than 3,000 trucks in calendar 1992, Bliss said.

Hino Diesel Trucks (U.S.A.) Inc. of Orangeburg, N.Y., also raised prices on 1993 FD through SG models by 3.7 to 6.8 percent, according John Hanrahan, vice president of marketing.

Hino is the last of the medium-duty importers to bring out new models this year, essentially because they have new cabs.

Hanrahan said the price increases applied after adjusting for the addition of air dryers to the brakes of 1993 models.

EUROPE

Taxes, inefficiencies cause price gap

continued from PAGE 6

distribution than either the distributor's or dealer's gross trading margins."

The balance of the price disparity between Europe, Japan and North America reflects European production inefficiencies and the cost of funding more than 150,000 surplus automaking jobs, the study notes.

"Judged by hours required to assemble a car, Europeans attain less than half the productivity of the Japanese and little more than two-thirds that of the U.S. producers," the report said.

"European car plants employ close to 150,000 more assembly workers than they would if Japanese average production standards were maintained," the company added.

On a per-car basis, the company said, U.S. carmakers' costs on average are $190 higher per vehicle than their Japanese counterparts. But for European producers, the gap widens to about $308 per vehicle.

"Thus, competing in North America for volume European manufacturers remains beyond the practical bounds of economic pricing," the study concludes.

"These are the crippling disadvantages that forced Rover and Peugeot from the United States."

INCENTIVE WATCH — CUSTOMER INCENTIVES

NEW PROGRAMS

CHRYSLER CORP.

Expires Dec. 31 unless otherwise noted. In lieu of rebates, finance rates of 2.9 to 7.9 percent are available.

1993 models

Chrysler LeBaron coupe (expires June 30)	$1,500
Imperial, New Yorker Fifth Ave. (both expire June 30)	$1,250
N.Y. Salon (expires June 30)	$750
LeBaron sedan	$750
LeBaron conv.	$700
Dodge Daytona (expires June 30)	$1,000
Dynasty, Spirit	$750
Shadow	$500
Dodge Ramcharger, Ram pickup (gas; expires June 30)	$1,500
Ram wagon (expires June 30)	$1,000
Dakota, Ram 50, Ram diesel puckup (excludes Club Cab)	$500
Eagle Talon	$700
Jeep Wrangler	$500
Cherokee (excludes Calif., Hawaii)	$500
Plymouth Acclaim	$750
Laser	$700
Sundance	$500
Minivans (excludes Calif., Hawaii) Caravan, Voyager (short and long wheelbase)	$500

1992 models

Expires Dec. 31. In lieu of rebates, finance rates of 2.9 to 7.9 percent are available.

Chrysler LeBaron coupe and conv., Imperial, N.Y. Fifth Ave.	$1,500
N.Y. Salon, LeBaron sedan	$1,000

incentive WATCH

Chrysler alters rebates, cuts finance rates

Chrysler Corp. has announced a new customer incentive program and has reduced finance rates for 1992 and 1993 models.

The program runs until Dec. 31 for 1992 and most 1993 models and until June 30 for some 1993s.

Rebates range from $500 to $2,000 on 1992 models and from $500 to $1,500 on 1993 models. The top rebate of $2,000 is on the 1992 Ramcharger. The highest rebate on 1993 cars is $1,500 on the Chrysler LeBaron coupe.

Finance rates in lieu of rebates now range from 2.9 to 7.9 percent. The rates were previously 4.9 to 7.9 percent.

Customer incentives on 1991 Chrysler models have been discontinued.

GMC raised the customer rebate on the 1993 Sonoma from $500 to $750. Incentives on 1992 models have been extended and now range from $500 to $2,000.

GMC's customer incentives expire Jan. 24.

Expired **Honda** dealer incentives on the Accord have been replaced by a lease program that runs until Nov. 30. The payment is $199 per month.

The $1,200 customer incentive that expired Oct. 2 for the 1991 **Hyundai** Excel was not renewed.

CAW seeks Suzuki help to end strike

LINDSAY CHAPPELL

Staff Reporter

The head of Canada's auto union appealed to Suzuki Motor Co. President Osamu Suzuki last week to get the carmaker back to the negotiating table to settle a three-week strike at CAMI Automotive Inc. in Ingersoll, Ontario

CAW President Basil "Buzz" Hargrove claimed in the letter that CAMI labor costs are $10 an hour less than Chrysler Corp.'s Jeep plant in Toledo, Ohio.

While the national leader appealed to Suzuki, a local union leader raised the prospects of more trouble after learning that CAMI officials told some parts suppliers the strike will last another month.

"If they're going to keep the workers out another month, they're going to have a problem on their hands," said Brian Daley, president of CAMI's CAW Local 88. "A lot of people are pretty mad about this. People are only going to be peaceful for so long."

CAW leader Hargrove said that when the 3-year-old joint venture between Suzuki and General Motors of Canada was proposed in the late 1980s, the union accepted a request for a "two-year lag" behind industry labor rates. While that original pact left CAMI out of the Big 3 contract pattern, he said, there was no agreement that it would always remain so.

Hargrove said CAMI, which builds the Suzuki Sidekick/Geo Tracker sport-utility and Suzuki Swift/Geo Metro, is also saving $300 to $400 per vehicle now under a national sales tax act that passed after the plant opened.

Daley added that CAMI has additionally saved about $30 million over the past three years as a result of employee ideas for improved factory efficiency.

About 2,100 union workers walked off the line Sept. 14. CAMI views the strike as an economic issue, saying CAMI depends on lower wage and benefit rates than the rest of the industry to make its products competitive with imports. Workers are asking CAMI to partially close the gap. ■

Trucks edge past 3 million

GWENDOLYN ZONGHETTI

Special Correspondent

U.S. truck production for 1992 topped 3 million last week, nearly six weeks earlier than that total was reached in 1991.

U.S. automakers last week produced 122,763 units, 0.3 percent more than the preceding week and 0.9 percent over last year.

So far this year, 4,289,035 cars have been built, up 4.1 percent over the same point in 1991.

Estimated Canadian auto production last week was 23,095, surpassing the preceding week by 21.7 percent and topping the year-ago week by 11.3 percent.

For the year-to-date, car output in Canada is 780,101, off 6.2 percent from 1991.

Truckmakers in the United States assembled an estimated 89,491 vehicles, an increase of 1.2 percent over the preceding week and 9.7 percent over the year-ago week.

Year-to-date U.S. truck production is 3,058,752, up 18.3 percent over last year.

In Canada last week, truck output was estimated at 18,887, off 1.0 percent from the preceding week and 11.6 percent from the 1991 week.

So far this year, Canadian truckmakers have assembled 726,024 units, 15.6 percent above the same period in 1991.

The estimated daily build rate of cars and trucks in the United States and Canada last week was 50,847, up 2.2 percent over the prior week and 3.6 percent over the year-ago week.

Last week's scheduled car and truck production was shared as follows:

General Motors, 35.6 percent; Ford Motor Co., 30.8 percent; Chrysler Corp., 15.2 percent; Honda of America Manufacturing Inc., 3.8 percent; Nissan Motor Manufacturing Corp. U.S.A., 3.7 percent; New United Motor Manufacturing Inc., 2.3 percent; Toyota Motor Manufacturing (U.S.A.) 2.3 percent; AutoAlliance International Inc., 2.0 percent; Diamond Star Motors Corp., 1.3 percent; Subaru-Isuzu Automotive Inc., 1.3 percent; miscellaneous, 0.9 percent; Navistar International Corp., 0.7 percent; and AM General, 0.1 percent.

GM's Janesville, Wis., truck plant worked daily and weekend overtime last week, and the postal line at the Moraine, Ohio, truck plant also worked daily overtime.

Ford scheduled daily overtime at three car plants: Lorain, Ohio; Atlanta; and Chicago.

Five of Ford's truck plants also worked daily overtime last week: Kansas City, Mo.; Louisville, Ky.; Lorain, Ohio; Twin Cities (St. Paul, Minn.); and St. Louis.

Chrysler's St. Louis truck plant is scheduled to work daily and weekend overtime this week. The Windsor, Ontario, truck plant and the Bramalea, Ontario, car plant will work overtime next weekend. ■

late news

Isuzu cuts 66 jobs in U.S.

LOS ANGELES — American Isuzu Motors Inc. and two of its sister companies laid off 66 people last week amid slumping sales.

The cuts amounted to 8.2 percent of the firms' combined staffs. The layoffs were shared evenly among the American Isuzu sales and marketing arm, the Isuzu Motors of America Inc. import and distribution operation and Isuzu Technical Center of America Inc.

Isuzu spokesman Dan McCue blamed the prolonged automotive recession. He said the company has been searching for ways to cut costs since the start of the year.

Despite strong sales of the Rodeo sport-utility, Isuzu's car and truck sales dropped 18.9 percent in the just-ended model year.

Ford registers for stock sale

DEARBORN, Mich. — Facing possible losses in the third and fourth quarters, Ford Motor Co. last week filed a registration statement with the Securities and Exchange Commission for a public offering of $1 billion of preferred stock.

"We believe this action represents an attractive opportunity to take advantage of strong individual investor demand and the present low levels of fixed-income yields," Chairman Harold Poling said.

In the filing, Ford says

Olds dealers join ad review

Retailers to have a voice as division selects agency

MARY CONNELLY
Staff Reporter

In a move marking the further "Saturnizing" of Oldsmobile, the division confirmed last week that at least two dealers will sit on the panel that selects its next advertising agency.

Oldsmobile, responding to criticism from its dealers, said in September that it would put its $140 million advertising account up for review. Leo Burnett USA and its predecessor agency have handled the account since 1934.

The division's sales have tumbled from more than a million in 1986 to 437,544 units in the just-completed 1992 model year, and many dealers blame the decline on Burnett's failure to come up with a clear image for the brand.

The incoming chairman of the national dealer council, R.F. (Dick) Smith of Royal Oldsmobile in Charleston, W. Va., is a likely choice for the panel.

In addition, at least one dealer from the division's national dealer advisory committee on marketing is expected to sit on the panel.

Dealers said the decision to give them vote in the selection of the agency is another example of Oldsmobile's new commitment to the Saturn Corp. philosophy. Oldsmobile's new general manager, John Rock, has embraced the groundbreaking tenets of Saturn, which include a strong factory-dealer partnership.

Saturn dealers were voting members of the team that selected San Franciso-based Hal Riney & Partners when the import-fighting subsidiary selected its first ad agency in 1988.

The review panel also will include representatives from Oldsmobile and Philip Guarascio, general manager of marketing and advertising for GM's North American Operations.

Oldsmobile last week began contacting advertising agencies on the initial list of prospects, according to *Advertising Age,* a sister publication to *Automotive News.*

In the 1992 model year, the advisory committee on marketing included six dealers from around the nation. The committee is one of

Paris roof raiser RICHARD DOLE

Heuliez SA, the Paris-based house that penned the Citroen XM, unveiled this three-seater it calls the Raffica at the Paris auto show last week. The design study features a hard-metal roof that retracts part way to create the targa look above; or all the way to become a spyder. With roof fully raised, Raffica turns into a hardtop coupe. Paris show coverage on Page 8.

Ford Explorer a big star in California

KATHY JACKSON
Staff Reporter

The Ford Explorer sport-utility has been selling so well in California that dealers could barely get their hands on them last month.

"They've been critically short," said Los Angeles dealer Bert Boeckman, who sells an average 160 Explorers a month. Boeckman, owner of Galpin Ford, said that he "underestimated how strong the Explorer would be."

The Explorer, introduced in April 1990, has done something for Ford Motor Co. that no other domestic vehicle has been able to accomplish in import-minded California for a long time.

Through the first half of the calendar year, the last period for which vehicle registrations are available, California Ford dealers had sold 21,034 Explorers, making the sport-utility the third-best selling vehicle in California, according to the September edition of *The California Report*, a J.D. Power and Associates publication.

John Rettie, editor of the publication, says the

Japanese price hike is double Big 3's

JOHN K. TEAHEN JR.
Senior Editor

In introducing their 1993 cars in the United States, the Japanese makers raised prices twice as much as the Big 3.

And since Jan. 1, prices of Japanese cars have gone up nearly four times as much as the prices of Big 3 cars.

Those actions, along with the quality improvements in Big 3 cars in recent years, mean that the domestic makers are in their strongest competitive position since the Japanese became a major force in the U.S. market.

An *Automotive News* analysis finds that stickers on the nine leading Japanese makes have gone up an average of 2.7 percent, or $460, in the 1993 model introduction period. The Big 3 hike was 1.31 percent, or $240.

That is just half of the story.

The Japanese had a major price increase last spring. It averaged 2.8 percent, or $452, for the nine makes studied. The Big 3 passed up a general hike last spring. Chrysler Corp. raised some car prices last January, and Saturn and Cadillac followed suit a while later, but the sales-weighted boost for the entire Big 3 car fleet was just $20, or about one-tenth of 1 percent.

Combining the early year and 1993 intro increases, the Japanese cars have gone up an average of about 5.5 percent, or $912. Their Big 3 rivals have jumped an average of 1.4 percent, or $260.

The nine Japanese makes are Toyota, Honda, Nissan, Mazda, Mitsubishi, Acura, Subaru, Lexus and Infiniti. They account for 99 percent of the Japanese-badged cars sold in the United States. Those Japanese makes and the Big 3 accounted for 94.2 percent of all cars sold in the United States in the first nine months of 1992.

The Japanese may find it necessary to take another ride on the price merry-go-round during the 1993 model year. Currency fluctuation is the reason. At the moment, it is socking the importers hard.

When the Japanese were raising

Trucks star in a dreary model year

JIM HENRY
Staff Reporter

A sales gain of nearly 350,000 trucks led the way for the Big 3 as they stole a solid chunk of market share from the Japanese in a tough 1992 model year.

Total car and truck sales reached 12.6 million, inching past a dismal 1991 by just 0.5 percent. But the last 12 months have provided more than their share of turmoil beneath the surface calm.

A year ago, Ford and Chevrolet pickups waged war for the top-selling model (full-sized pickups), and Ford won by a narrow margin of 8,000 units. The divisions exchanged verbal shots in the aftermath. This year,

industry sales rates in the United States, Europe and other markets remain low and "these factors coupled with seasonal dealer inventory adjustments are expected to result in a loss for Ford in the third quarter."

The automaker said the losses could offset earnings in the first half of $840.3 million. The reason: recent instability in currency markets overseas resulting in reduced sales.

Still, the company could end the year in the black. According to the filing, "full-year 1992 results, however, still would represent a substantial improvement over 1991 losses."

Suzuki rebuffs CAW president

The president of Suzuki Motor Co. Ltd. wants the head of Canada's auto union to stay out of a month-old strike at Suzuki's Canadian joint venture.

In a letter to Canadian Auto Workers President Basil "Buzz" Hargrove, Osamu Suzuki said the strike "should basically be handled between the local union and the management" of CAMI Automotive Inc., Suzuki's 50-50 joint venture with General Motors in Ingersoll, Ontario.

The union wants CAMI to pay what other other Canadian automakers pay. Suzuki said that CAMI was still not profitable, but union officials claim that CAMI's parent companies are making money from the venture.

A CAMI spokeswoman said Friday that no talks are scheduled, and there is "no apparent movement toward a middle ground by either side."

— Lindsay Chappell

Hummer rises to 25 dealers

SOUTH BEND, Ind. — AM General, maker of the Hummer off-road vehicle, has signed a second group of dealers.

Nationwide, that brings the total to 25. The company hopes to sign 25 more by the end of the year, said James Armour, president and chief executive officer.

The Hummer is being produced with a 6.2-liter diesel engine and a three-speed automatic transmission. Prices range from $45,000 to $50,000.

Armour says work has begun on prototypes fitted with a 6.5-liter General Motors turbodiesel and a four-speed automatic, and the LT1 5.7-liter V-8 from the Chevrolet Corvette.

— Jack Keebler

Sales in Canada fall slightly

TORONTO — For the sixth month in a row, sales of cars and trucks fell in Canada, but the September decline was less than 1 percent.

Trucks again performed better than cars. Truck sales were up 9.86 percent over September 1991 levels, while cars slipped 4.85 percent. Combined sales were 102,225.

Chrysler, Mazda and Toyota had double-digit increases. Ford, General Motors, Nissan and Honda dropped.

Alarm firm sues for Viper name

DETROIT — A California auto security company is suing Chrysler Corp., claiming it owns the rights to the name Viper used on Dodge's 400-horsepower muscle car.

Directed Electronics Inc. filed trademark infringement suits in federal and California courts against the automaker in January. The two agreed in April to delay the suits while trying to reach a settlement, but the talks failed.

Directed Electronics, which makes and sells the Viper line of car alarms, then asked U.S. District Court in Detroit to schedule a hearing to stop Chrysler's use of the name.

Chrysler hasn't been served with any papers or received official notification of the Detroit filing, according to spokesman Tom Houston.

— The Associated Press

Nasser to head Ford of Europe

BRENTWOOD, England — Ford of Europe Chairman L. Lindsey Halstead has announced his retirement at the end of the year.

He will be replaced by Jac Nasser, 44, chief executive officer of Ford Motor Co. of Australia Ltd. since 1989. Nasser also was elected a vice president of Ford Motor Co.

John Ogden, director of car programs for Ford's North American Operations, will succeed Nasser. The changes are effective Jan. 1.

— Ed Wendt

Chrysler pays pension fund

Chrysler Corp. made a $300 million contribution to its unfunded pension liability during the first two weeks of September.

The contribution, following an earlier $10 million payment, was almost six times the $51 million required by the government, according to spokesman Tom Houston.

Through a tax carryback, Chrysler was able to get a $45 million tax refund from making the large payment.

The company owed $4.39 billion in unfunded pension liabilities as of Dec. 31, 1991, which it has pledged to pay off over the next 10 years.

Since Chrysler's pension liability continues to grow, the $310 million payment so far doesn't mean it has reduced its outstanding obligation by that amount, Houston said.

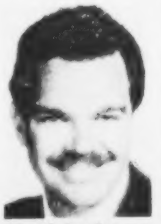
Mandel joins sales staff



Mandel: sales rep

Dutch Mandel has rejoined *Automotive News* as an advertising representative in the Detroit office. He will oversee a portion of the General Motors account and other key Detroit-based accounts.

Mandel, 34, began his career at Crain Communications in 1984 as associate editor of *AutoWeek*, joined *Automotive News* in 1988 as a reporter, and later sold ads for *Crain's Detroit Business*. He most recently served as an advertising account representative for *Detroit Monthly*. AN

briefly

Open wide, say Ahhh-chieva

Let's say the release for the fuel filler door doesn't work on your **Oldsmobile** Achieva, **Pontiac** Grand Am or **Buick** Skylark. Think you're out of luck when you run out of gas? No way! **General Motors'** high-tech solution is to "insert a common tongue depressor in the gap around the fuel filler door opening at the 9 o'clock position . . . (and) push the tongue depressor into the opening approximately 38 mm. . . ." Well, you get the idea. Then, apparently, the technician will be able to repair the root cause.

FIRST STRIKE — Automaker members of the World Electric Vehicle Association will try to set worldwide standards for their products before individual governments make a hodgepodge of regulations. "The automakers are more global than any other entity on the planet, for better or worse," said John Wallace, a **Ford Motor Co.** executive and the new chairman of the global group. "We won't leave anybody out" of the standards discussion, he said, but "we're going to get together and decide."

RING IT UP — GM opened its 1 millionth GM card account, less than one month after it launched the new MasterCard on Sept. 9. "People understand the value of the GM card, and for the 14 million people who buy a new car this year, the GM Card can make that purchase easier than ever before," said Ronald Zebeck, managing director of GM's Credit Card Operations. A cardholder in Jacksonville, Fla., last week used a $250 rebate to buy a **Buick** Park Avenue, the first car sold under the plan.

S.C. COP COUP — BMW of North America Inc. hit some snags as it tried to create some good will this summer. First, the Tennessee Highway Patrol balked at its offer of a new M5 squad car because BMW wanted some publicity showing the car in action. Then the car was delivered to South Carolina's Highway Patrol, with the same loose strings attached. The $59,000 sedan sat as the state's Ethics Commission pondered, and finally the state told BMW it was happy to keep the Bimmer as long as it didn't have to give the publicity. This time, BMW agreed.

FRATERNAL TWINS — Chevrolet General Manager Jim Perkins proudly stated recently that the fuel filler door was the only piece of sheet metal common to the **Geo** Prizm and **Toyota** Corolla, both built by the **GM-Toyota Motor Co.** joint venture **New United Motor Manufacturing Inc.** in Fremont, Calif. Turns out Perkins was wrong. Chevy says not even the fuel filler door is the same. The cars are virtually the same under the skin, though.

SCARY STUFF — Ford designer Fritz Mayhew told a meeting of SAE's Detroit Section some inside stuff about development of the 1993 Lincoln Mark VIII. The design staff showed the clay design to Ford Design Center management and "some were scared at first. But, we always say that if you're not a little uncomfortable at this step, you haven't reached enough." Mark VIII production began Oct. 6. Official introduction is set for Dec. 26.

Range Rover leaps ahead with new air suspension

The Electronic Air Suspension on the 1993 Range Rover County LWB (long wheelbase), says Land Rover, represents a quantum leap forward in ride, handling and noise isolation.

By using air springs at all four corners, electronic height sensors and sway bars, the vehicle automatically adjusts spring rates to constantly maintain a level ride, even when the truck is fully loaded, the company says.

The driver has control over suspension settings that raise or lower the vehicle over a range of 5.1 inches. Normal ride height is comparable to previous Range Rovers with iron coil springs, the company says. The vehicle assumes this normal position during routine, around town driving and when towing.

Low Profile is automatically engaged when the vehicle cruises above 50 mph for 30 seconds, dropping ¾ inch for an aerodynamically lower profile and a two percent gain in fuel economy.

When parked, the driver may select the Access height by pushing the Down button that lowers the vehicle 2.4 inches to facilitate entry and exit.

When approaching deep water crossings or severe off-pavement conditions, the driver pushes the Up button for High Profile, which raises the vehicle 1.6 inches and enables it to wade in water nearly 22 inches deep.

A final capability is Extended Profile, which will cause a suspended wheel to reach down a full 2.8 inches from standard height to gain traction if the vehicle is high centered off-road. ☐

VW leads 12.3% fall in Mexico auto sales

MEXICO CITY — Sales of cars and trucks in Mexico dipped for the first time this year in August, as industry leader Volkswagen continued to suffer from a month of lost production.

But sales at Ford and General Motors also were down, leaving the country's five automakers with a 12.3 percent overall decline from August 1991. Both cars and trucks were down.

Chrysler, this year's success story, posted another strong gain in sales despite a drop in truck volume. Nissan sales were up 5.8 percent.

VW was outsold by every one of its competitors in August as its sales plunged 51.7 percent. VW production dropped by a third in July and two-thirds in August because of a labor dispute. Production resumed in late August.

August production among the five makers was down 5.3 percent, largely because of VW. Still, output through August was 13.6 percent ahead of 1991's pace.

Announcement of the sales results coincided with a report that a slowdown in the Mexican economy and changes in deductibility of business car fleets will not affect auto sales significantly.

The report, by the Banco Nacional de Mexico, says Mexico's economic slowdown will ease in mid-1993. As the overall economy has slipped, automakers have been offering special credit programs aimed at boosting car sales.

Cesar Flores, president of the Mexican Automotive Industry Association, predicts Mexican production will keep growing at an average rate of 10 percent through 2000. AN

SALES

Trucks are the stars in slow model year

continued from PAGE 1

Ford's pickup margin increased to 41,000 units, yet Ford Division General Manager Ross Roberts shrugged his shoulders.

"As far as I'm concerned, the model year is history," he said. "It doesn't mean a damn thing."

He can afford to be modest. His division gained nearly a point of car market share and more than a point in trucks en route to a 7.7 percent overall sales increase.

And Ford swamped Chevy by 369,000 units, more than five times its 67,000-unit victory in 1991.

Ford finished No. 2 in another race: for best-selling car. Honda's Accord (387,881) increased sales and defended its title against a charging Ford Taurus. American Honda Motor Co. Inc. also used a late-September spurt to surpass Toyota Motor Sales U.S.A. Inc. at the wire and hang on to third place in corporate car sales.

Toyota remained fourth. But aside from Suzuki, Toyota Motor Sales was the only Japanese firm to boost car-truck sales in the 1992 model year. And for one main reason: Lexus. History will mark 1992 as the first model year that Lexus outsold every European make in the United States — including former kingpin Volkswagen.

Last year, only six makes surpassed their year-ago totals. This year, 13 did. And most of the strength came in trucks.

Trucks accounted for most of Ford Motor Co.'s 6.0 percent increase. Chrysler Corp. lost 71,000 car sales but gained 4.2 percent overall because of trucks. While Chevrolet's C/K line couldn't keep up with Ford's F series, it did gain nearly 24,000 sales. Without trucks, General Motors' overall decline would have been worse than the posted 0.4 percent.

Overall light-truck sales gained 6.7 percent to 4.49 million — or 35.5 percent of the total market.

Despite a 2.7 percent sales gain in September, the entire industry finished below 13 million units for the second straight model year. Before 1991, sales hadn't fallen below that total since 1983.

Car sales fell 2.7 percent for the model year to about 8.2 million, the sixth consecutive yearly decline.

For the entire light-vehicle market, the Big 3 gained 1.1 points of share to 71.6 percent, while Japanese nameplates slipped 0.9 points to 24.6 percent.

Other noteworthy items:

- The Big 3 owned 85.3 percent of the light-truck market. They gained 2.6 points at the expense of

Japanese badges, which were hurt by price hikes and intense political pressure.

Big 3 truck sales grew by nearly 348,000 units. Chrysler set a minivan sales record.

■ Thanks to Toyota Motor Sales, Japanese makers gained share in a shrinking car market. Japanese-badged cars had 30.6 percent share, up eight-tenths of a percentage point.

■ Ford Division outsold Chevrolet to lead in both cars and trucks. In the 1991 model year, Chevrolet sold more cars than Ford. But Chevrolet lost 1.5 points of market share in 1992 on a decline of 147,079 sales.

As in 1991, Ford sold five of the Top 10 vehicles. The Explorer's 19.9 percent sales increase enabled it to jump from ninth place to fifth in the standings.

But this year, Ford's Roberts downplayed the Ford-Chevy rivalry.

"That's a short-term deal," he said. "I think they're going to come back and do well." Chevrolet is looking forward to a wave of new products in the next couple years.

Chevrolet had an off year, even though the Lumina climbed among the Top 10 sellers. Buick slipped slightly, and so did Cadillac, despite strength from the Eldorado and Seville. Oldsmobile was down again. GMC Trucks posted an 11.6-percent improvement.

Chrysler Corp. was aided by a 32.2 percent jump in Jeep sales, paced by the all-new Grand Cherokee.

Staff Reporters Kristine Stiven Breese in Los Angeles and Mary Connelly, Phil Frame and Kathy Jackson in Detroit contributed to this report.

Sept.'s vehicle sales echo '92 trends

JIM HENRY

Staff Reporter

Car and truck sales rose 2.7 percent to 1,075,758 units in September, the last month of the 1992 model year.

And true to form for the year, car sales limped ahead 0.3 percent over September 1991 levels, while light trucks sprinted 7.0 percent.

On a seasonally adjusted basis, cars and trucks sold at an annual rate of 12.5 million. That's an improvement over August but well below the year's peak of 14.0 million in June.

For the Big 3, September echoed trends for the model year.

Chrysler Corp. sales jumped 17.9 percent, thanks largely to a 40.8 percent leap in light trucks.

Sales more than doubled for the Chrysler Division, while Jeep climbed 65.8 percent.

Ford Motor Co. improved 4.8 percent for the month, with Mercury up 30.6 percent.

Mercury sales included 1,942 units of the new Villager minivans.

General Motors dropped 1.5 percent in September to 358,018 units.

But Pontiac was 18.4 percent above the year-ago month, and GMC Truck soared 21.0 percent.

Honda and Acura cars outsold Toyota and Lexus cars by 7,779 units in September, allowing American Honda Motor Co. Inc. to retain third place in model year car sales.

But American Honda declined 1.9 percent for the month to 68,568 units, while Toyota Motor Sales U.S.A. Inc. improved 12.5 percent to 82,795 cars and trucks.

PRICES

Japanese '93 hike is double Big 3's

continued from PAGE 1

prices last spring, the yen was trading at about 131 to the dollar. In mid-September, during the 1993-intro price-hike season, it was 124. It dropped to 119.75 last Monday and was 121.95 last Thursday.

The Japanese importers will resist another price hike as long as they can. George Borst, vice president of strategic and product planning for Toyota Motor Sales U.S.A. Inc., told a Detroit news conference last month, "I'd like to see this as the only increase for 1993. We'll adjust as conditions adjust, but Toyota is not planning any mid-year increase at this time."

This intro season brought a considerable change in the importers' public approach to the currency situation. None of the Japanese importers mentioned the yen-dollar relationship in the press releases announcing their new prices.

In the past, currency fluctuation often has been the hook on which they hung their price hikes.

Also conspicuously absent was any mention of higher marketing costs (incentives) or higher manufacturing expenses.

The latest Japanese increases may steer more customers toward Big 3 showrooms, but the spring round did not bring that result. In the first three months of this year — before the price hikes played a role — the nine Japanese makes had 29.3 percent of the U.S. car market. For the first nine months, they had 29.8 percent.

Conversely, the Big 3 share of the car market dropped from 64.9 percent on March 31 to 64.5 percent on Sept. 30.

The 1993-intro boosts for the Japanese ranged from 1.4 percent for Nissan and 1.5 percent for Subaru to 2.9 percent for Mazda and Lexus. Acura, Infiniti, Toyota and Honda were clustered at 2.5 to 2.7 percent. Those percentages are based on comparably equipped 1993 and 1992 models. As noted, the average hike was 2.7 percent.

On the domestic side, Ford Motor Co.'s announcement that it hiked prices only three-tenths of 1 percent on comparably equipped models played a big role in limiting the overall Big 3 increase to 1.3 percent.

Chrysler reported a hike of 2.4 percent, and General Motors' was 1.7 percent.

Japan's move upmarket also has affected the amount of its price hikes.

It's pretty hard to find a basic-transportation auto in the lineup of a major Japanese player these days. Lexus, Infiniti and Acura have broadened the Japanese spectrum, and the Toyota Corolla and Camry and the Honda Civic and Accord are no longer the plain, inexpensive econoboxes they were in their early days in the United States.

It's the good old American way. The higher the price of the car, the higher the increase on that car.

And from a dollar standpoint, a 3 percent hike on a $40,000 Lexus carries a lot more weight than a 3 percent hike on a $7,000 Toyota Tercel.

Last spring's price boosts on Japanese cars were politically motivated, although only one leader of a Japanese firm said so publicly. That was Richard Recchia, executive vice president of Mitsubishi Motor Sales of America Inc., who said "it would be naive to think that politics didn't have some part in it."

U.S.-Japanese trade friction was at a peak last winter, and the price hike was viewed as a way to ease the tension by making U.S. cars more competitive.

From a dollars and cents standpoint, it also was a way to shore up the Japanese firms' flagging profits in this country during a severe recession at home.

The profit crunch still exists on both sides of the ocean, and the 1993 increases for both the Big 3 and the Japanese are efforts to ease the pain.

In all cases, the comparisons in this article are sales-weighted, and in every case but one, they are based on comparably equipped models. That means year-to-year (or period-to-period) equipment adjustments are factored into the price increases.

The lone exception is the 1993 intro hike for Mitsubishi. Mitsubishi Motor Sales of America has not provided an average increase, either percentage or dollars, for comparably equipped 1993 models.

Sales weighting means that the increase on each line of vehicles is weighted in accordance with that line's share of a company's overall sales.

For example, if the increase on a specific line averages $200 and that line accounts for 10 percent of sales, the $200 hike would be $20 for the company's full complement of vehicles. ■

Chrysler keeps preliminary '93 car prices; some trucks up

JOSEPH BOHN
Staff Reporter

The latest incentives > 42

Chrysler Corp. last week finalized 1993 car prices without any change in the base-model figures, optional equipment or destination charges from preliminary prices first issued in July.

Dealers solidly backed the move, saying it enabled them to get off to a faster start on selling 1993s. In recent years, dealers have had to wait until as long as November for their final prices.

Chrysler also is guaranteeing incentives for up to nine months on some models.

While car prices didn't change from July, full-sized Club Cab pickups went up by $200; two-wheel-drive Dakotas increased $212; and four-wheel-drive Dakotas went up $350.

Prices on Chrysler's imported Mitsubishi Motors Corp. vehicles, which didn't have any tentative increases in July, also increased between $58 and $987 from their final 1992 level.

Two of the Plymouth Colt Vista and Eagle Summit wagons went up $58 and $70, respectively, but the four versions of the Dodge Stealth jumped $666 to $987.

In the Dodge/Plymouth Colt and Eagle Summit lines, a notchback two-door has replaced last year's hatchback. The base 1993 model is up $232 and the high-line choice is up $302.

New to the Colt lineup are four-door sedans priced at $9,448 for the base trim and $10,423 for the GL. The Summit four-door models are the same price as the Colts. Compared with 1992 models, the Summit DL increased $180 and the ES is up $126.

New rebates on 1993 models, running from Oct. 1 to June 30, include: $1,500 for the Chrysler LeBaron coupe and the gas engine D- and W-series Ram pickups; $1,250, Chrysler Imperial and Fifth Avenue; $1,000, Dodge Daytona; $1,000, Dodge Ram Wagon, Ram Van and conversions built on van chassis; and $750, Chrysler New Yorker Salon.

Frank Galeana, owner of Van Dyke Dodge in Warren, Mich., and chairman of the Dodge National Dealer Council, said dealers were able to hit the ground running and start delivering 1993 models sooner as a result of getting firm prices earlier.

Dealers have been getting price protection on any sold orders they wrote since July. This year, for the first time, Monroney stickers and invoices on early 1993s didn't carry the "tentative" designation they usually do.

"In all my years at Chrysler we haven't had a program like that before. It really allows dealers to plan along with the company," Galeana said.

But Tom Szott, owner of Taylor Jeep-Eagle in Taylor, Mich., said Jeep dealers had hoped for more of a price reduction in the Jeep Cherokee Sport and Country models.

Szott said that with an extra $1,000 reduction in the price of these models, dealers could carve out a bigger market niche. ■

PRELIMINARY U.S. CAR AND LIGHT-TRUCK SALES, MODEL YEAR - 1992 vs. 1991

OLDS

Dealers to help select ad agency

continued from PAGE 1

three standing advisory dealer committees at Oldsmobile. Members change periodically but not on a regularly scheduled basis.

The committee has not met since Rock came to Oldsmobile in April. The structure of the structure and its membership for the 1993 model year are likely to be decided during the dealer council's semiannual meeting, which is scheduled for Oct. 19 in Detroit.

The decision to allow dealers to help select the agency that will shape the division's message in the 1990s comes after at least two years of dealer criticism of Leo Burnett.

Both local and national dealer councils have sought the current agency review, and in some cases, they pressed for the ouster of the agency.

The national dealer council passed a resolution last October recommending the initiation "of an agency review process every three years beginning in 1992," according to minutes from the council meeting.

Maury O'Daniel, outgoing chairman of the national dealer council, confirmed the language of the resolution, but he said the council has backed away from the three-year schedule.

He described the wording as "an expression of frustration that we are not doing as well as we should be and part of it may be the marketing." ■

Four importers update rebates

Special Correspondent

incentive
WATCH

Four imports have updated their incentive programs in an effort to boost fourth-quarter business.

Mazda has announced customer incentives for some 1992 and 1993 models.

The car incentives range from $700 for the 1993 Protege to $1,400 for the 1992 MX-6 and expire either Nov. 3 or Jan. 5.

Customer incentives for 1992 Mazda trucks range from $500 to $1,700.

Rebates for 1993 pickups range from $400 to $1,700. The truck payments vary by model and region and expire Jan. 5.

Rebates for **Suzuki** dealers expire Dec. 2. They range from $500 to $1,000 on 1992 Swift and Sidekick models and $300 to $500 on 1993 Swifts and Sidekicks.

Isuzu's fourth-quarter regional dealer incentive program offers both fixed and stair-step rebates. The program expires Dec. 31.

For all regions, Isuzu offers a rebate of $1,500 on 1992 Impulse models and $2,500 on 1991 Impulses. Incentives on 1993, 1992 and 1991 Stylus models range from $300 to $1,000 for all regions.

The program includes a nationwide $400 rebate for the 1991, 1992 and 1993 Isuzu Rodeo 4x2. The payment is $800 to $1,400 on the 1991, 1992 and 1993 Rodeo 4x4, depending on the number of units sold during the program.

Incentives for Isuzu pickups vary by region and the number of units sold.

Mitsubishi's dealer incentive program includes rebates and terms that vary by region. There is a rebate of 7 to 9 percent of the sticker price for 1991 and 1992 Eclipse models. The 1991 and 1992 Eclipse Turbo carry a $500 bonus. The rebate for 1993 Eclipses ranges from 4 to 7 percent of the sticker price.

The 1991 and 1992 Galant rebates range from zero to $3,000. The 1993 Galant has a rebate range of zero to $1,750. The rebates for 1992 Mitsubishi trucks range from zero to $1,800.

In Mitsubishi's regional programs, leased models and sales of 1993 trucks do not carry a rebate, but they are included in the number of units required to meet the sales bogey. AN

Mazda begins kit assembly of autos in Vietnam

RICHARD JOHNSON
Staff Reporter

TOKYO — Mazda Motor Corp. has become the first Japanese carmaker to launch auto assembly in Vietnam, which is widely regarded here has Asia's most important undeveloped market.

Mazda has begun semi-knockdown kit assembly of the 32/Familia and Cronos/626 at Hanoi-based Vietnam Motor Corp., according to a company spokesman.

Initially, assembly of 300 to 500 passenger cars per year is expected, with all units sold in Vietnam. So far Mazda has sent about 100 units to the Hanoi plant, the spokesman said.

Vietnam Motor is a joint venture between the Vietnamese government and Columbia Motor, a Philippine carmaker. The Mazda official said the company has signed a memorandum of understanding with Vietnam Motor, but plans no equity stake.

Vietnam Motor reportedly also is in negotiations with Daihatsu Motor Co. about production in Hanoi.

"We are expecting growth in sales in Vietnam," said the Mazda official. "They are making an effort to improve the infrastructure, which must come first."

A delegation of Vietnamese officials came to the Beijing Auto Show in June to court foreign vehicle and component manufacturers and promote the country's first international auto industry exhibition next April in Hanoi.

Prior to this year, the Vietnamese auto industry consisted mainly of reconditioning factories and a few components makers. But two joint ventures with foreign manufacturers began operations this year: Vietnam Motor and Mekong Co.

Mekong Co. earlier this year began assembling vehicles in Binh Chanh on the outskirts of Ho Chi Minh City. The plant assembles Jeep-like Mekong-Star four-wheel-drive vehicles, based on sport-utility kits from Korea's Ssangyong Motor Co. It also assembles commercial trucks.

Vietnam banned the import of passenger cars in April 1991, but has since dropped that policy.

The tariff rate for passenger cars is 100 percent. Through the first seven months of 1992, Japan exported 1,144 cars to Vietnam.

The entire country has a fleet of 118,675 motor vehicles, according to Vietnam's Ministry of Transport and Communications, including 60,321 trucks, 11,815 passenger buses and 20,485 cars.

The U.S. trade embargo with Vietnam prevents American companies from doing business in the country. However, the ban is widely expected to be removed within a year. AN

Chinese firm has stock listing

Brilliance China Automotive Holdings Ltd. last Friday became the first company with an interest in a Chinese enterprise to be listed on the New York Stock Exchange.

Brilliance China's initial public offering is 5 million shares of common stock at $16 per share. The stock will be traded under the symbol "CBA." Underwriters for the offering are The First Boston Corp., Merrill Lynch & Co. and Salomon Brothers Inc.

Brilliance China owns 51 percent of Shenyang JinBei Passenger Vehicle Manufacturing Co., a joint venture with Toyota Motor Co. that is China's leading builder of minibuses. Proceeds from the stock sale will be used to buy more production equipment, build warehouses and plants, and upgrade technical capabilities.

ACID RAIN

Nissan not alone in battling problem

continued from PAGE 3

damaged Escorts built in Edison, N.J. Ford has also had problems at its Atlanta Taurus/Sable plant.

Three years ago, Ford responded with a new system of spraying a temporary acrylic-based coating onto vehicles to protect them during transit.

"There were situations in Atlanta where, if our cars sat on the ground unprotected for even one or two weeks, they would all have to be repainted," said Don Dopierala, a Ford paint operations supervisor in charge of new material development.

This summer at its Lincoln plant in Wixom, Mich., Ford switched to a new paint technology to protect its cars. The system replaces the traditional clearcoat with a "two-component" urethane coating.

General Motors and Chrysler are introducing similar systems in North America. Four of Chrysler's assembly plants now use urethane coatings, and the others are scheduled to switch over next year.

The Saturn plant in Spring Hill, Tenn., was the first GM operation in North America to use an acid-resistant polyurethane clearcoat. That factory is about 30 miles from Nissan's. Saturn engineers say the new system protected its cars from the same conditions that spoiled Nissan's.

GM plans to extend use of the Saturn system.

Meanwhile, Ford is already moving to a new system. Dissatisfied with its two-component chemistry, which requires the expense of mixing ingredients just before application, Ford is experimenting with a single-component coating that it hopes to introduce next year. If it works as planned, the company will switch all factories to the new system.

Carmakers may get some relief from the new Clear Air Act. Next month, new environmental regulations will require a reduction in sulfur dioxide emissions, a chief component of atmospheric acid. But those regulations will be phased in through the end of the decade.

Nissan's count of damaged vehicles includes 9,000 pickups, 4,000 Sentras and 1,300 Altimas. The rest have been imported models, including 1,000 Maximas. AN

U.S. AND CANADA CAR AND TRUCK PRODUCTION

Vehicles are assembled in the United States unless noted. Vehicles are cars unless noted.

Output tops '91 quarter

GWENDOLYN ZONGHETTI
Special Correspondent

Third-quarter vehicle production in the United States and Canada was 2,571,240, up 0.8 percent over last year. Because of changeover downtime, third-quarter output was 22 percent below the second quarter.

Car production of 1,250,791 in the United States was the lowest third-quarter total since 1982 when 1,215,347, cars were built.

The Canadian car production total of 221,104, was the lowest third-quarter figure since 1989.

September's U.S.-Canada production total of 974,068 cars and trucks was 5.7 percent over August, but was off 2.2 percent from September 1991.

U.S. car production was estimated at 115,441 last week, down 1.1 percent from the prior week and down 3.0 percent from the year-ago week.

So far in 1992, U.S. car production is 4,448,479, up 5.3 percent over last year.

Canadian car production of 18,704 last week fell 19.2 percent from the prior week and 23.9 percent from the 1991 week. Ford Motor Co. lost production of 4,500 vehicles due to the closing of the St. Thomas, Ontario, car plant for inventory adjustment.

Year-to-date car production in Canada is 807,513, down 6.2 percent from 1991.

U.S. truckmakers built an estimated 82,652 units last week, off 9.8 percent from the preceding week, but up 5.1 percent over 1991.

So far this year, truck production in the United States of 3,179,904 is down 19.5 percent from the same period in 1991.

Canadian truck production last week was 17,262, off 4.8 percent from the preceding week and up 0.2 percent from the 1991 week.

Year-to-date Canadian truck production is 749,684, a 16.7 increase over the 1991 period.

The estimated daily build of cars and trucks in the United States and Canada last week was 46,812, down 6.2 percent from the prior week.

General Motors' Moraine, Ohio, postal line worked daily overtime for the third consecutive week.

The Chevrolet Blazer and GMC Jimmy line at the Janesville, Wis., truck plant worked daily and weekend overtime last week.

Ford scheduled daily overtime at three car plants and five truck plants last week. The car plants were: Lorain, Ohio; Atlanta; and Chicago. The truck plants were: Kansas City, Mo; Edison, N.J.; Louisville, Ky.; Twin Cities (St. Paul, Minn.); and St. Louis.

Ford's Avon Lake, Ohio, truck plant worked daily and weekend overtime.

Chrysler Corp.'s St. Louis and Jefferson North (Detroit) truck plants are scheduled to work overtime this Saturday.

All Canadian car and truck plants will be closed today in observance of Thanksgiving Day. AN

Cut, cut: 6 months after the coup

Smith's finance guys race GM against time

PHIL FRAME
Staff Reporter

In his six months as president of General Motors, Jack Smith has relentlessly focused on creating the new North American Operations organization and on cutting costs.

"It's all about cost cutting," a senior GM executive said last week. "Everything we do relates to that."

Men with backgrounds in finance have filled the top spots at Jack Smith's NAO. At least six of the top Smith appointees worked together on the New York financial staff in the early 1970s, and other finance men from Detroit have been elevated under Smith.

But Smith's cost-cutting is racing to stay ahead of GM's worsening market performance. In the first six months of 1992, GM's fortunes worsened as the North American market remained flat.

Financial analysts think that later this month, GM will report a third-quarter loss of up to $800 million. The fourth quarter is expected to be worse.

Meanwhile, labor unrest threatens Smith's plans. Strikes at two plants wounded GM briefly in August and September. Settlement of a contract at a parts plant forestalled a strike that would have shut down every GM assembly operation in North America.

The United Auto Workers union wants to save jobs, but GM knows it has to cut back if it is going to survive. The imperative was clearly identified in a report two weeks ago by Harbour & Associates, a manufacturing consulting firm based in Troy, Mich.

Chrysler looks profitable ➤ 3

The Harbour report said GM needs to cut 60,000 production jobs to become competitive with arch-rival Ford Motor Co. The report said GM could save $4 billion a year in the process.

There are no signs that GM will get any relief from increased car and truck sales. The economy is stagnant, consumer confidence is low and GM has just three new cars in the 1993 model year after introducing 15 redesigned cars and trucks a year ago. The next significant product push for GM comes in the 1994 model year.

GM's outlook seems so bleak that rumors surfaced in Detroit and New York two weeks ago that the company was considering filing for reorganization under Chapter 11 of the bankruptcy code.

Financial analysts flatly discounted that GM would consider such a tactic, and GM issued a strong denial.

"This is a perfect example of an irresponsible rumor," a GM spokesman said.

The spokesman said GM is encouraged by the results of its continuing cost cutting.

For all the reorganizing and cost cutting that has gone on in Smith's first six months, the company seems to be mired in an unforgiving marketplace.

Underlying GM's actions is a fundamental shift in policy that Smith engineered almost immediately after the GM board named him president April 6.

The new motto became "profit first," replacing the goal of "raising market share profitably" that Chairman Robert Stempel set

see SMITH, 50

JOE WILSSENS/AUTOMOTIVE NEWS

Since taking over in April, GM President Jack Smith has battled a sluggish economy and labor unrest in his quest to slash the automaker's costs.

GM, UAW discussing early-out program

LIZ PINTO and JACK KEEBLER
Staff Reporters

In a bid to avoid a costly confrontation over layoffs and income-guarantee programs, General Motors and the UAW are discussing an early-retirement program that could help the carmaker shed thousands of blue-collar workers.

Although such a program would be enormously expensive upfront, it would save money by reducing — and possibly eliminating — GM's payouts for income-guarantees in later years.

The programs, which pay 95 and 100 percent of a laid-off worker's salary and benefits for up to three years, cost the automaker $4.4 billion in the 1990 contract.

About 18,400 workers were in the program at the beginning of September, double the highest monthly total in 1990.

Rank-and-file pressure to extend the programs has grown since February, when GM announced it will shut 21 plants and cut 60,000 blue-collar jobs by 1995.

GM, as a matter of policy, does not discuss labor plans before informing employees. But the company said last week that discussions with the UAW about accelerated attrition are ongoing.

news

IRS ends audits of Ford dealers

DEARBORN, Mich. — Ford dealers are off the hook with the Internal Revenue Service as a result of a settlement between the automaker and the IRS over extended service contracts its dealers sold between 1985 and 1989.

The IRS has agreed to halt audits of Ford and Lincoln-Mercury dealerships, to not fight dealers in tax appeals and to refund tax and interest amounts already paid by dealers on extended service contracts.

The IRS has audited hundreds of Ford dealers and assessed back taxes and interest on Ford-backed extended service contracts sold by dealers between 1985 and 1989. The IRS said dealers owed more taxes because in those years Ford contracts made the

VP debate raises question on CAFE, jobs

Quayle takes aim with dark scenario

MAX GATES
Staff Reporter

WASHINGTON — Fears about job losses stemming from higher fuel economy standards were stretched to an extreme during last week's vice presidential debate.

Vice President Dan Quayle raised the subject Tuesday in a charge against Democrat Al Gore, who has endorsed a bill to raise corporate average fuel economy standards to 40 mpg by 2001.

Quayle said: "You ought to ask somebody in Michigan, a UAW worker in Michigan, if they think increasing the CAFE standards, the fuel economy standards, to 45 miles a gallon is a good idea — 300,000 people out of work."

True? Maybe. But the vice president added five miles a gallon to the proposal of his opponent, and he took the worst case scenario from the Motor Vehicle Manufacturers Association to come up with a job loss figure.

In a March 1992 fact sheet labeled "Jobs at Risk," MVMA said the "potential adverse impact" of a 40 mpg CAFE standard would be the loss of 150,000 to 300,000 jobs.

The fact sheet's origin was in a 1990 analysis done to combat proposals in Congress. Sen. Richard Bryan, D-Nev., wanted a 40 percent increase in CAFE, and Sen. Gore was a co-sponsor. MVMA said that raising CAFE as the Bryan bill proposed "would result in a loss of 200,000 auto industry jobs" by 1996. The association said an additional 10,000 jobs would be lost in the year 2001, when the second of two steps in the new standard would take effect. The cur-

Owners of 21 Club buy 31-franchise auto group

ARLENA SAWYERS
Staff Reporter

Emco Motor Holding Inc., a subsidiary of the company that owns New York's famed 21 Club, said last week it had acquired majority ownership of the 31-franchise DiFeo Automotive Group of Jersey City, N.J., for $75 million.

The transaction, one of the largest U.S. dealer takeovers ever, puts Emco in the retail automotive business for the first time.

Emco is a subsidiary of 21 International Holdings Inc., which owns the 21 Club in New York and Foamex, a manufacturer of polyurethane foam that is based in East Providence, R.I. The DeFeo franchises are expected to generate sales of $550 million in 1992, or nearly 7 percent of the total metropolitan New York market, according to J.D. Power and Associates, a marketing information company in

VWoA ups parts reimbursement

AUBURN HILLS, Mich. — Volkswagen of America Inc. said last week it will increase the rate at which it reimburses Volkswagen and Audi dealers for warranty parts.

Effective Jan. 2, 1993, reimbursement for parts used in warranty repairs on 1993 model year vehicles will be dealer cost plus 35 percent. Reimbursement for parts used in warranty repairs on 1994 and subsequent model year vehicles will be dealer cost plus 40 percent.

VWoA will continue to reimburse dealers at the current rate of cost plus 30 percent for warranty repairs on model year vehicles prior to 1993 and warranty repairs performed prior to Jan. 2.

CAMI resumes labor talks

Negotiators at CAMI Automotive Inc. returned to the bargaining table last week to resolve a month-long strike.

The talks resumed just days after both sides indicated that their positions were too far apart to continue negotiating.

Spokeswomen for CAMI and the Canadian Auto Workers said there had been no change in either stance as the talks resumed. Negotiations broke down over compensation and grievance issues on Sept. 14.

CAMI is a joint venture between General Motors of Canada and Suzuki Motor Co. Ltd. in Ingersoll, Ontario.

Just before talks resumed, the CAW voted to approve a "dues assessment" that would have asked union members at GM's other Canadian plants for financial support for the 2,000 CAMI workers.

— *Lindsay Chappell*

Volvo trims 1993 build

GOTHENBURG, Sweden — Volvo Car said last week it will trim its planned 1993 model production by 12,000 units to 223,000, and will decide by November whether to close two of its three Swedish plants.

The two plants, at Kalmar and Uddevalla, each employ about 800 and have combined single-shift production of 45,000 units. Production would be shifted to the Torslanda plant in Sweden.

Volvo, with current capacity of 350,000 units, produced 204,000 1992 models.

More cars for Vietnam

TAIPEI, Taiwan — San Yang Industrial Corp. has become the latest overseas company to strike a deal to build cars in Vietnam.

San Yang, Taiwan's largest motorcycle manufacturer and a licensee of Honda technology, said it will invest $55 million in a plant. The first phase of the project will be just the assembly of motorcycles, but San Yang plans to add car production later.

Emissions rule pact signed

DETROIT — Officials from four domestic vehicle makers, the EPA and the California state government last week signed a landmark agreement to jointly develop technology to monitor and enforce future emissions standards.

The accord also will try to improve and standardize state and federal emissions tests. According to Rick Middleton, a Chrysler Corp. engineer involved in the consortium, new-car emissions will be so low in the second half of the decade that engineers do not now have equipment accurate enough to measure them.

The project, signed in Santa Clara, Calif., is expected to run for about three years.

The Big 3 and Navistar International are participating.

— *Jack Keebler*

Corvette gets run-flat tires

Chevrolet said last week it will install Goodyear run-flat tires on a few 1994 Corvettes and make them standard equipment on 1995 Corvettes.

Goodyear says a Corvette can travel up to 200 miles at 55 mph with zero inflation pressure in the tires. Carmakers like the idea because it gives drivers a measure of safety without requiring a jack and a spare.

The secret to the Goodyear Eagle EMT (extended mobility tire) is an extra beefy sidewall. Goodyear says there is no loss of fuel economy.

— *Jack Keebler*

Mercedes OKs Ssangyong deal

SEOUL — Mercedes-Benz will provide South Korea's Ssangyong Motor Co. with technology and know-how to build the Mercedes-Benz 3.0-liter M104 series and 4.0-liter M111 gasoline engines.

This broadens the scope of the technological cooperation started between the two in February 1991. The original agreement licensed Ssangyong to manufacture Mercedes-Benz's MB100 light-commercial vehicle, diesel engines and transaxles.

The gasoline engines will be fitted on Ssangyong's current and future sport-utilities.

— *Oles Gadacz*

briefly

Dealers lust for Saturn

Saturn has climbed to the top of another list. The sales-per-dealer leader is now the most desirable franchise in America, knocking off **Lexus** after a two-year reign. The dealer attitude survey by the National Automobile Dealers Association ranked Lexus No. 2 and **Infiniti** No. 3. "In fairness to Saturn, they've done a lot of things right," said Robert Franciono, NADA industry relations director.

SATURN-SAN — General Motor's Saturn Corp. is pushing capacity at its Tennessee plant already, yet it wants to sell Saturns in Japan. **Isuzu Motors Ltd.**, GM's junior partner in Japan, has a half-empty plant in Fujisawa. A GM official in Tokyo has put the thoughts together, and says there is a long-shot possibility of Saturn assembly at the Isuzu plant.

KEEP 'EM HAPPY — Last year, the National Automobile Dealers Association learned that having a star speaker — Stormin' Norman Schwarzkopf — raised attendance at the final convention session, from 800 to 5,000. So for the New Orleans convention's closing session Feb. 9, organizers invited the United Kingdom's ex-prime minister, now Lady, Margaret Thatcher. (She joined the House of Lords in June.) Our sources say she'll be paid more than the $50,000 the general is supposed to have received as a stipend.

ANOTHER ANALYSIS — Take that family sedan segment, equip 1993 models similarly, and what do you get? Runzheimer International, the Wisconsin consultancy that tracks such things for fleet buyers, says total annual fixed and operating costs (based on 20,000 annual miles) are:

Honda Accord DX	$6,678
Toyota Camry DLX	7,250
Chevrolet Lumina	7,824
Ford Taurus GL	8,040

Note: The Chevy and Ford have V-6s, the Honda and Toyota have inline fours.

HAIL, NISSAN — To sell 23,000 discounted vehicles damaged by acid rain, **Nissan Motor Corp. in U.S.A.** decided to take dealer orders by phone. You could hear the sighs of relief. Last May, after hail damaged 4,700 units at its Dallas distribution yard, Nissan organized a foot race. At the sound of the starting gun, dealers or their appointed employees ran through the fleet, claiming cars by ripping price stickers off windows. "I thought it was insane," said Neil Huffman, a Louisville, Ky., dealer. "I really wish we'd gotten more Maximas in Dallas, but my used-car manager couldn't run fast enough."

LEE LOOKS WEST — Lee Iacocca, now 68, will remain the part-time chairman of **Chrysler Corp.'s** executive committee after he retires Dec. 31, but he'll consider only big pictures. "If somebody wants to do a big alliance, or a partial merger, something like that, we'll talk about it," said Iacocca. But he wants to goof off, too. "I can't remember anything happening in my life that isn't related to a model year. I've got two houses out West that I never visit, and I want to live in them a little while, in Aspen and Palm Springs. I want to play some golf, stuff like that."

Iacocca: time to goof off

service & parts

Dealers finding profit in clearcoat paint fixes

Small investment brings big results

DALE JEWETT
Service Editor

More dealers are turning to detailing as a quick and easy fix for sagging profits and improving customer satisfaction.

In a recent *Automotive News* survey of dealer service managers, almost two-thirds said their dealerships offer detailing service, and 93 percent of them rated it as "very" or "somewhat" profitable.

Arnold Palmer Cadillac in Charlotte, N.C., for example, runs six to eight cars a day through its detailing center at $100 per. Sales Manager Troy Winkelmann figures a 50 percent profit on each car while maintaining a three-person staff devoted to detailing.

Until recently, the service has been available primarily at luxury car and large multi-franchise dealerships. But as backshops are being counted on to generate more profits, more small and medium-sized dealerships are considering the service.

"Customer satisfaction is the name of the game — the only game in town these days," says Peter Laitmon, a consultant for Meguiar's Inc., which makes finish repair and polishing products for the industry and consumers.

"When a dealership can take a customer's car, point out a flaw and say, 'We can fix that without repainting the car,' that customer is going to be happy and will want to come back," Laitmon says. "There are opportunities driving in the service door every day."

The use of clearcoat paint systems has grown rapidly as car buyers are attracted by the "wet look" finish the two-part process provides.

A clearcoat paint finish is susceptible to many types of damage, including:

- Etching from environmental fallout such as acid rain, which leaves marks that look like water spots.

Recently, Nissan Motor Corp. in U.S.A. said the clearcoat paint finishes on about 17,000 new cars was damaged by acid rain. Chevrolet, Toyota, Honda, Chrysler and Ford have all reported similar problems.

- "Dust mites," small imperfections in the finish caused by particles of contamination that are trapped beneath or in the clear paint coat.
- Scratches and swirl marks from belts brushing against the vehicle; brushes from automatic car washes; and marks left behind from improper washing and polishing.

The clearcoat can magnify these marks when viewed at an angle in bright light, particularly on cars with dark base coat colors.

"In the old days, you'd have to sand and repaint car," says Winkelmann. "With clearcoat you can get away with a lot more.

"I know that GM hired a paint guy away from BMW and he's a real fanatic about imperfections. The cars we're getting from the factory now are a lot better," Winkelmann says.

Several companies, most notably Meguiar's and DuPont, are offering polishing systems that remove minor imperfections from the clearcoat without repainting.

"If you can save the factory paint, it cuts down on a major warranty cost and improves looks and value of the vehicle," Laitmon says. "But the service writer is the key guy. He's on the firing line with customers."

Training is important to prevent the paint job from being damaged by removing too much of the clearcoat.

"You've got to know how to work clearcoat paints — what to look for, how to fix it and what to point out to the customer," Laitmon says. "I figure 93.5 percent of dealers are not detailing. I say they should feel guilty."

Laitmon says a dealership can get started detailing with a $100 investment and a buffer. Service groups at most automakers, and Meguiar's, offer training courses.

J.D. POWER
AND ASSOCIATES
Auto Supplier Seminar
Outlook for 1993 and Beyond

December 9, 1992
9:00 am - 4:00 pm

Topics Include:

"Surviving In A Consumer Driven Market"
J.D. Power, III
President,
J.D. Power & Associates

"The Auto Supplier Forecast, Why It Is The Way It Is"
Dr. John Hammond,
Senior Partner
J.D. Power & Associates

"Plant Quality & Productivity: Is Over Capacity Still An Issue In North America?"
Stephen C. Goodall
Partner & Director, Detroit Office
J.D. Power & Associates

Who Should Attend?
The Auto Supplier Seminar is designed for all automotive suppliers who want to gain information and knowledge on many different levels of the Automotive Industry including customer satisfaction, forecasting, and future industry trends.

Your Guide To The Future
The objective of this seminar is to offer J.D. Powers' assessment of the strengths and viability of key products in the auto market. Many topics, including current market dynamics and forward planning, will be addressed.

Fee Structure:
$499 for the first attendee from the company
$249 for each additional attendee

Location:
The Radisson Plaza Hotel
Southfield, MI 48075

in brief

SERVICE

134a compressors get special service

DETROIT — General Motors has set up a special service program for 1993 model vehicles equipped with the new R-134a air-conditioning compressor.

Under the program, if a compressor requires service it will be replaced with a new unit rather than disassembled at the dealership.

Repairs not involving the compressor are to be performed as directed by the service manual.

All repairs to the air conditioning system must be verified by the dealership with the Harrison Technical Assistance Group.

The compressors are being installed on the 1993 Chevrolet Lumina APV, Pontiac Trans Sport and Oldsmobile Silhouette minivans and will be used on the redesigned Pontiac Firebird and Chevrolet Camaro.

The campaign is similar to others instituted by the automaker to gain quick feedback on new product technologies.

ICI debuts new waterborne paint

WESTLAKE, Ohio — ICI Paints has launched what it claims is the first waterborne auto refinish metallic paint system under the brand name Aquabase.

The company said the system can cut the amount of organic solvent used in basecoat/clearcoat repairs by 50 percent.

The key components of the painting system are a new generation of waterborne primer and specially developed waterborne pre-wipe and gun wash, the company said.

Service business rises again

DETROIT — Repair business at new-car dealerships remained above year-ago levels in August for the third consecutive month.

Parts and labor revenue for the month was 101.7 percent of the August 1991 level, according to the Automotive News Service Index. For the first eight months of this year, service business is running 103.7 percent ahead of the same period last year.

The largest gains for the month were noted in shop parts sales, up 3.9 percent, and total labor sales, which rose 3.5 percent. Gross profit on all labor and parts and accessory sales increased 2.4 percent, and repair orders rose 1.2 percent.

The greatest gain for the year has occurred in shop parts sales, up 6.6 percent from 1991. Gross profit on all labor and parts and accessory sales is up 2.7 percent, while total labor sales have increased 1.5 percent for the period.

Repair orders written and sales of all parts and accessories are up slightly.

Among dealers reporting an increase, the depressed economy is a common factor: several dealers noted that customers are having older vehicles serviced instead of buying new cars. Other dealers attributed gains to more aggressive advertising campaigns and better management of shop personnel.

Figures used in the Service Index are compiled from a cross-section of new-car dealerships.

SERVICE INDEX
101.7*

	Aug. '92 vs. Aug. '91	Jan.-Aug. '92 vs. Jan.-Aug. '91
Gross Profit on All Labor and P&A Sales	+ 2.4%	+ 2.7%
Repair Orders Written	+ 1.2%	+ 0.1%
Total Labor Sales (Customer & Warranty)	+ 3.5%	+ 1.5%
Shop Parts Sales (Customer & Warranty)	+ 3.9%	+ 6.6%
Sales of All P&A	+ 0.1%	+ 0.1%

* Survey by Automotive News shows that dealers' service and parts business in August 1992 was 101.7 percent of business in August 1991. Service business in 1992 was 103.7 percent of business in the corresponding period in 1991.

Six indicted in part-stripping case

PITTSBURGH — Two auto dealers, three of their employees and a used-car manager have been indicted by a federal grand jury for their alleged roles in a car-parts ring.

The six men were charged with mail fraud and conspiracy.

Daniel Nicoletti, 45, allegedly headed a ring that defrauded insurance companies in 1986-91. He is accused of accepting automobiles that their owners had reported stolen, stripping the cars and using the parts in other autos.

Nicoletti owned the defunct Nicoletti Auto Sales Center in Pitcairn, a Pittsburgh suburb. Two of his employees, Thomas Blotzer, 38, and William McLaughlin, 27, were indicted with him.

Also indicted was Steven Plutnicki, 33, who was the used-car manager for two New Kensington auto dealerships: R.J. Chevrolet and the defunct World Class Motors (Chrysler-Plymouth-Dodge-Ford).

Plutnicki allegedly provided cars from his business to Nicoletti and told his insurance company the cars had been stolen.

William DelPrincipe, 47, a car dealer in New Castle, Pa., and Poland, Ohio, also is accused of providing cars to Nicoletti and reporting them stolen. DelPrincipe and one of his employees, Joseph Petrucci, 62, allegedly provided Nicoletti with two cars in 1988 and 1990.

Makers cautious about order surge

JOSEPH BOHN
Truck Editor

Heavy-truck sales and orders continued strong in September and seem likely to lead to further production increases by January.

But some industry executives are concerned that orders may be outpacing economic growth. If so, some order cancellations may be on the horizon, they fear.

Net new Class 8 orders, totaling about 13,600 units in September, were off from August's 15,075 — but sharply ahead of 7,974 in September 1991, according to Rothschild Inc., a New York investment firm.

Frank Prezelski, an analyst with Rothschild, said the strong order pattern reflected continued heavy buying by big fleets.

Because many of the truck orders are for 1993 delivery, they have not yet resulted in a boost in manufacturers' production schedules.

But that's likely to occur by January if strong demand continues for the next couple of months, Prezelski said.

Still, there's concern that current demand may actually be too strong, given the still weak state of the economy.

And, if the economy doesn't pick up in the near term, it could result in a surge of order cancellations later this year.

Industry officials, such as John Merrifield, Ford Heavy Truck general sales and marketing manager, said smaller-volume buyers still haven't returned to the market in appreciable numbers. That has limited sales gains in the medium-duty segment.

Class 8 sales in September rose 28.2 percent from a year earlier, to 10,637 units, according to the Motor Vehicle Manufacturer's Association. Nine-month Class 8 sales of 84,926 are now 17.8 percent ahead of last year, according to MVMA.

Ford Motor and Navistar International Corp. had particularly strong gains of 44.0 percent and 43.8 percent, respectively, in their September Class 8 sales.

Ford's big turnaround in heavy trucks has given it a 57.1 percent gain over last year for the first nine months of the year.

Medium-duty segments were all up in September with the exception of Class 4. Sales of 2,027 trucks there were off 17.2 percent from last year.

Class 7 sales rose 30 percent from a year earlier to 6,728 units, the strongest gain in the medium segment.

Class 6 sales were up 29.2 percent for September, to 2,130 units, and 27.2 percent for the year to date.

Medium-duty imports have generally had a very good year with Mitsubishi Fuso turning in particularly strong gains of 27.4 percent and 16.9 percent for the month and year-to-date, respectively. AN

Navistar launches new powertrain

CHICAGO — Navistar International Transportation Corp. will begin offering a new optional Variable Power Drivetrain system in November.

The system will be available on all 9000 series heavy-duty cabover and conventional-cab premium tractors powered by Cummins N14 ESP Command 14.0-liter diesel engines equipped with CELECT electronics.

The system incorporates special electronic software and was jointly developed by Navistar and Cummins Engine Co. of Columbus, Ind. The software enables a truck's engine to "learn" a driver's chosen speed and then maintain it. It reduces shifting by as much as 75 percent, according to Mike Telley, Navistar vice president of heavy truck business.

Freightliner adds sleeper models

PORTLAND — Freightliner Corp. expanded its cab line to include four sizes of SleeperCab and five sleeper box configurations in its conventional trucks.

New choices include the 70-inch Raised Roof SleeperCab, 58-inch SleeperCab and 50-inch Walk-in Sleeper Box.

The SleeperCabs are available for Freightliner's FLD 120 Long Conventional or the FLD 112 Medium Conventional with a wide variety of custom features and interior trim packages.

Freightliner has added at least one new sleeper model to its line every year since 1988.

Jim Hebe, Freightliner president and chief executive officer, said changing market requirements created a need for larger and better furnished sleepers for long-haul drivers and teams and a need for different size sleepers to optimize cargo-carrying capacity.

Truck distributor profits drop

LIVONIA, Mich. — Truck equipment distributors' net profits before taxes fell to 0.9 percent in 1991 from 1.5 percent in 1990, according to the National Truck Equipment Association.

The top 25 percent of distributors' profit margins fell to 4.4 percent in 1991 from 4.8 percent in 1990, NTEA reported.

Isuzu names Vikner to top post

BREA, Calif. — Paul Vikner, Isuzu Truck of America Inc.'s former vice president of sales and marketing, was appointed vice president and general manager of the company.

Vikner's duties were expanded to include the management and operation of the company.

Vikner is the senior executive responsible for Isuzu Truck's activities as they relate to the industry, according to Hajime Senga, Isuzu Truck president.

Vikner will continue to be responsible for sales, marketing and field organizations.

He also has responsibility for the company's parts and service activities.

Vikner credits Isuzu Truck's rapid sales expansion over the past seven years to its focus on dealers and their needs.

— Joseph Bohn

Paul Vikner is now vice president and general manager of Isuzu Truck.

Luxury imports defy the sales slump

KRISTINE STIVEN BREESE
Staff Reporter

LOS ANGELES — Although everything from the economy to the election seems to be working against them, luxury imports are holding their own in the current market.

In fact, sales results for the first nine months of this year show that six of the nine imports that have topped their year-ago totals are luxury nameplates.

Mazda, Suzuki and Daihatsu are the others that show upturns for the year.

BMW, Audi, Infiniti, Lexus, Mercedes-Benz and Rolls-Royce/Bentley all reported healthy gains through the first nine months of the year.

Year-to-date, Lexus was the big winner, with a 42.3 percent sales increase.

The September winner was rival Infiniti, whose sales were up 76 percent.

The positive results reflect two trends. Luxury car buyers are often less susceptible to the hardships brought on by recession. But even luxury buyers recognize a good deal when they see one. And this year, leases have been the "good deal" those customers were looking for.

Audi, BMW, Infiniti, Lexus and Mercedes have been pushing leases this year.

In many cases, leasing now accounts for more than half their business. AN

NISSAN
Introducing the Nissan Quest. The minivan that doesn't feel like a bus.

A print ad for the Nissan Quest touts the minivan's car-like ride, handling and comfort.

Making A Good First Impression

Carefully researched, crafted campaigns are vital to the launch of new vehicles

By: Raymond Serafin

There's a television commercial currently running for a dandruff shampoo that says you never get a second chance to make a good first impression. It's advice that automakers have taken to heart as they rev up marketing efforts to make sure new products make a good first impression with consumers.

"A lot of time and money is spent on getting the products right," says Ren Rooney, corporate marketing manager for Toyota Motor Sales, which hopes its introduction of an all-new Corolla this fall will be as successful as its launch of the redesigned Camry was a year ago.

"Toyota is very dedicated to launching new products creatively and aggressively."

For the Corolla, Toyota and its agency, Saatchi & Saatchi DFS, developed the subtheme, "Discover Corolla. Again," featured in four new TV commercials, an eight-page magazine insert, outdoor billboards and a separate Hispanic campaign using Spanish-language TV, print, radio and outdoor advertising.

As the Corolla example illustrates, auto marketers depend on several factors coming together to create a successful launch.

At the heart of the effort is strong ad creative backed by a sufficient ad budget targeted to reach the right audience. But a lot of research goes into a campaign before creative concepts are developed, says Bill Ludwig, creative director of Chevrolet agency Lintas:Campbell-Ewald, which developed the launch campaign for the Geo Prizm this fall and is working on the early 1993 introduction of the redesigned Chevrolet Camaro.

The agency uses the research to distill the views of consumers on the product, the brand and its competitors, and also meets with designers and engineers to get a good understanding of the product itself, says Ludwig. Then it develops the concepts it wants to communicate, and finally, the creative way to do it.

As in the case of the Geo Prizm, production of a launch commercial often involves some eye-catching special effects.

A Prizm launch commercial uses a giant Rubik's Cube made up of video monitors in order to introduce the redesigned Geo Prizm. Parts of the cube are rotated until the Prizm comes together, and the car then drives out of the cube and onto the set. Boss Films, which created special effects for films such as "Batman" and "Die Hard," created the visuals by mixing computer generated images with real photography.

Ludwig says the Rubik's Cube was used to convey the idea that the car is well put together, and because it appeals to Prizm's target audience of highly educated buyers.

"Any technique should be used to enhance

▶ Page 6i

GMC Truck has one of its Jimmy sport-utilities do a bungee jump off a bridge to demonstrate its strength.

◀ Page 4i

the idea, not as a substitute for an idea," Ludwig says.

One of the most concerted launch efforts this fall is coming from Chrysler Corp., which is introducing its line of new sedans, the Chrysler Concorde, Dodge Intrepid and Eagle Vision. A carefully orchestrated public relations effort began more than a year ago, and Chrysler is even spending $30 million on dealer training efforts this year to ensure the LH launch goes off without a hitch at the retail level.

To make clear the distinct target audience for each of the new models, Chrysler's marketing staff went as far as staging its own game show, hiring actors to portray the typical buyer for each of the brands.

Media buying is being segmented to reach those different buyers, with Dodge making heavy use of network TV, Chrysler emphasizing cable TV, and Eagle relying largely on magazines.

Chrysler is backing the launch with an estimated $80 million in media buys, including a major presence on Nov. 3 election night broadcasts to introduce the individual models.

"This town has fallen in the trap of not effectively seeding the names of its new products," says John Damoose, vice president of marketing at Chrysler. He says the LH introduction is particularly important because Chrysler is trying to reach out to buyers who are leaning toward imports.

"If you have a poor launch, you're always playing catch-up," he says.

Ford's Lincoln-Mercury division and Nissan are giving substantial backing to their respective versions of a jointly developed minivan, with both emphasizing the car-like attributes of the product.

The Mercury Villager ad launch will be the biggest ever for the division, which is spending more than $20 million over a two-month span, said Steve Lyons, Lincoln-Mercury's general marketing manager. The launch began on Sept. 24 when Lincoln-Mercury booked a "roadblock" on the four major networks, reaching 51 million viewers.

"We haven't been in the minivan business before, so we have to create awareness," says Lyons, who is working on plans now for another major launch, the Dec. 26 introduction of the Lincoln Mark VIII.

Nissan revised its entire ad strategy to coincide with this fall's launch of its Quest minivan and Altima sedan, dropping the 5-year-old "Built for the human race" slogan and replacing it with, "It's time to expect more from a car."

The Altima's Oct. 4 introduction included a barrage of commercials on network TV, independent stations and cable networks delivering 500 million impressions, believed to be the largest ever single-day TV buy. □

Car exports up, but trade deficit rises again

LINDSAY CHAPPELL
Staff Reporter

Gains in exports of American-made vehicles are being outpaced by a stronger U.S. thirst for imports.

The latest automotive trade data from the U.S. International Trade Commission shows respectable gains in automotive exports in the second quarter and in the year ended June 30.

U.S. manufacturers exported more than $12.6 billion in vehicles during the 12 months ended June 30. That was $2 billion more than the year-before total.

But a jump in imports from such countries as Canada, Japan, Germany, Mexico and Sweden made the automotive trade deficit worse.

For that 12-month period, foreign manufacturers shipped $54.6 billion in cars and trucks into the United States. That was almost $2.6 billion more than year-earlier shipments.

That resulted in a $42 billion trade deficit for the year — $550 million more than in the previous 12 months.

Several automakers in the United States are pushing for export gains, and Washington policy makers are championing the effort as a means of stimulating U.S. economic recovery.

Citing brisk sales of its Accord wagon, America Honda Motor Co. Inc. recently increased its 1992 export forecast to 50,000 from 40,000.

General Motors this month established a separate German company to import and distribute North American vehicles in that country. GM hopes to increase its exports to Europe more than tenfold by the end of the decade, to 250,000 year.

The new government numbers indicate that cars are leading the export expansion.

Car exports rose just over $1.9 billion in the year ended June 30, while truck exports rose about $100 million.

But the overall gains were more than offset by U.S. demand for products made outside this country.

Shipments of Canadian-made vehicles alone increased $2.8 billion during the year. Imports from Mexican assembly plants grew by $400 million. The Big 3 dominate exports from both countries.

Imports from Japan grew during the 12-month period, but not as fast as those from Canada. The Japan-to-United States figure rose $310 million.

For the year, Canadian exports to the United States were less than $1 billion below Japan's 12-month tally.

Japan exported $22.13 billion in vehicles to the United States during the year. Canada's car and truck exports totaled $21.17 billion for the period.

Final '92 model sales

Printed above is the final 1992 model-year sales table.

The preliminary table was printed in the Oct. 12 issue of *Automotive News*. Revisions were made for Infiniti, Subaru and Daihatsu. AN

M-B, Mitsubishi talks quietly fade away

MARY ANN MASKERY
Staff Reporter

TOKYO — The fourth meeting of the Daimler Benz and Mitsubishi groups underscored just how little the two sides have to say to each other, particularly about autos, despite high expectations when the talks started two years ago.

"Basically it's over," says analyst Steve Usher of Kleinwort Benson International, "There's not much left."

After the one-day Kobe meeting the parties issued a vague statement about an agreement to discuss possible future cooperation in environmental protection. Japanese press reports called it a face-saving device, added by Mitsubishi to show some apparent progress.

A fifth meeting is slated about one year from now, in Berlin.

Of the many projects raised and then shelved, the one remaining possibility for a deal — a Mercedes purchase of a Mitsubishi diesel engine — was still not ready for resolution when the two sides met.

The executives on both sides simply "confirmed that working level groups would continue the discussion," says Mitsubishi Managing Director Taizo Yokoyama.

Mercedes-Benz executives left Japan and immediately went to Seoul and signed an agreement with Ssangyong Motor Co. to supply engine technology to the South Korean company.

> "What Mitsubishi wants and needs, Benz is apparently not willing to provide."
>
> **STEVE USHER**
> ANALYST

The Mitsubishi engine under discussion is a diesel engine that would be supplied to a "Transporter" van-type commercial vehicle to be remodeled in 1995. The Mitsubishi side wanted to announce a final agreement, according to Japanese press reports, but were put off by Mercedes.

There may still be some potential between the two giant conglomerates, perhaps an agreement in aerospace, according to Usher. But in the automotive area, "they are mutually incompatible," Usher says.

"Mitsubishi needs a foothold in Europe. But why in the world would Benz give them that? What Mitsubishi wants and needs, Benz is apparently not willing to provide."

But the Mitsubishi agreement to sell Mercedes-Benz cars is still a peripheral effort in the Mercedes distribution network.

Of 230 Mercedes-Benz dealers in Japan, 184 are Yanase & Co. shops, 35 are independent Mercedes dealers and 11 are Mitsubishi. Mitsubishi expects to double that figure by next March. AN

Saturn 1st in Sept. dealership sales count

KAREN DETKOWSKI
Statistician

With cars alone, Saturn Corp. last month returned to claim its No. 1 position from Toyota Motor Corp. in the *Automotive News* sales-per-dealer calculations.

Saturn took the top spot for the first time in September 1991 with a calculated 67 sales for each of its 114 outlets.

A year later, the company holds its lead with an estimated 203 outlets and an average of 75 sales per outlet, up from 63 in August when supplies were disrupted.

Saturn plans to have 225 outlets by Dec. 31.

Toyota, with cars and trucks combined, slipped to 64 sales per dealer from 69 in August.

Honda Motor Co. dealers also have been selling high averages since March. The company occupied third place in the September survey with 59 passenger-car sales per dealer, down from 61 in August.

Ford car/truck sales won back fourth position, which Lexus had laid claim to in August, with an overall average of 51 sales per car/truck outlet.

When considering trucks only, Ford remains the unchallenged leader.

In September, 17 makes showed increases on a per dealer basis, 14 dropped and 7 remained in line with August.

September had 25 selling days

Rolls sees some encouraging signs

KRISTINE STIVEN BREESE
Staff Reporter

BEVERLY HILLS, Calif. — In the rarefied lobby of the Four Seasons hotel here, it is easy to believe Rolls-Royce Motor Cars Inc. has a great future.

A stream of luxury cars pulls up to the valet outside as the rich and famous stroll around the grounds. These people can afford what Rolls-Royce has to offer, cars that cost between $138,000 and $310,000.

But beyond the gates, a weak economy and the anti-ostentatiousness of the 1990s foretell a different future for Rolls-Royce. But President Howard Mosher says that in spite of the troubles, he sees some encouraging signs.

In an interview here last week, where Rolls introduced its 1993 line, Mosher noted:

Mosher: Nine-month sales up 7 percent

■ Rolls-Royce sold 268 cars through September, nearly a 7.0 percent increase over the same span in an abysmal 1991. Although that was done with the help of a new model, the Bentley Continental R, Mosher says it's a sign that the worst is over.

■ The cost of a Rolls-Royce or Bentley may be high, but it's "no longer seen as stratospheric."

Due in large part to Mercedes-Benz, which last year climbed the price ladder with its top-of-the-line 600SEL ($129,000). The new "entry-level" Bentley Brooklands sedan, which the company describes as having "practical appeal as an everyday car," starts at $138,500.

Mosher says it will aim this car at current and prospective Mercedes-Benz buyers and tell them that for about $10,000 more "they can have a Rolls-Royce."

"The Mercedes price hike helps us in a way because it increases our consideration pool," he said.

■ He has cut the number of dealers from almost 70 in the late 1980s to 47 today. He says the numbers are just about right for current and projected sales.

■ Mosher says that Rolls-Royce is responding to the 1990s trend against conspicuous consumption by focusing less on status. "Instead, we're putting more attention on selling the buyer on what he's getting from the car. It's more of a story about the personal value he'll get from owning it." AN

Canada likes minivans

JEREMY SINEK
Staff Correspondent

TORONTO — With the Chrysler minivan now entering its 10th model year, the niche-sized snowball it set rolling in 1983 is still growing in Canada.

The Dodge, Plymouth and Chrysler vans — popularly known as Chrysler MagicWagons — set a new record of 59,583 units in Canada during the 1992 model year. That's 18.9 percent higher than the previous record of 50,115 in 1991. And it happened in a market that was down 6.1 percent in the just-ended model year and 7.2 percent since January.

"It's been a bright spot right through this recession," said Chrysler Canada spokesman Walt McCall.

But while Chrysler still reigns, the competition also posted significant gains. Combined sales of General Motors' APV minivans and Chevrolet/GMC rear-wheel-drive minivans rose 20.5 percent over the previous model year to 31,076. The Ford Aerostar rose 9.6 percent to 23,786 and was Ford's third-best selling nameplate, behind the F-series pickups and Tempo.

As a result, minivans now account for 11 percent of the Canadian market, up from 9 percent in model year 1991. That compares to a 7.9 percent share in the United States for the 1992 model year, up from 7.0 percent the year before.

Ian Forsyth, marketing director of Nissan Canada, attributes the difference in part to "a more utilitarian mindset" among Canadian buyers. There are also fewer multi-vehicle households in Canada, so the sole family "car" tends to be versatile — like a minivan, station wagon or sport-utility.

Another indicator of minivans' popularity in Canada: Nissan discontinued the Axxess in the United States two years ago, but it's still on sale in Canada, even after this year's introduction of a second Nissan minivan, the Quest. AN

Sales in Japan off as large cars lose their luster

MARY ANN MASKERY
Staff Reporter

TOKYO — A downturn in the big-car segment pulled September sales of cars and trucks to a 4.4 percent decline from a year earlier to 466,256 units.

Except for a slight increase in June, sales have fallen continuously for almost two years.

JAPAN CAR AND TRUCK SALES

*Cars over 2.0 liters

Through September, sales of regular cars and light trucks were 5.7 percent behind the previous year. Including mini vehicles with engines below 660 cc, the drop this year has been 6.4 percent, to 5,332,100 units.

A small increase in the mini market and import segments kept September from being completely bleak.

But, says analyst Koji Endo of S.G. Warburg Securities: "The market has not really bottomed out yet. There is no sign of growth."

It was the second consecutive month of decline for the large-car segment, over 2.0 liters, which had been enjoying gains even as the broad market fell for two years.

Japan's Big Five automakers posted mixed results in September. Toyota was flat, Nissan and Honda were off, and Mazda and Mitsubishi were up.

Nissan had a relatively high sales figure a year ago when it was introducing three major remodeled vehicles: the Cedric/Gloria, Cima, and Bluebird.

Mitsubishi's upturn is fueled largely by its lightweight commercial vehicles.

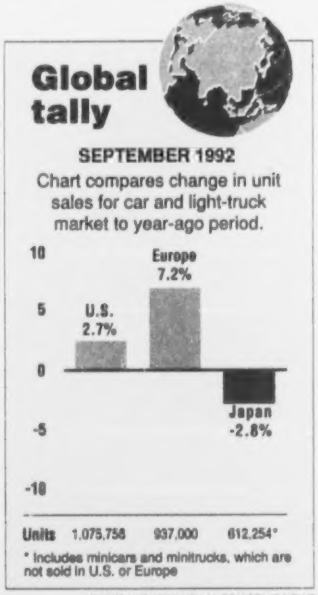
Mazda sales were supported by a major internal campaign to get employees to buy a new car or get a friend to buy one.

Sales of mini vehicles climbed 2.4 percent, the first upturn in 17 months.

Sparked by increased shipments of station wagons from U.S. Toyota and Honda transplants, September import sales climbed 9.0 percent to 19,370 units. Except for a blip in June of this year, the increase is the only real one since December 1990.

The German makes, which dominate the import market, also reported mixed results. BMW and Volkswagen were down, Mercedes Benz and Audi were up.

For the Big 3, General Motors was down 9.5 percent to 817 units, Ford was up 23.5 percent to 294, and Chrysler was up 39.8 percent to 151. AN



DAVID L. BURHANS / AUTOMOTIVE NEWS

European sales rise 7.2%

VW leads market, up 31.1% in Sept.

DIANA T. KURYLKO
Staff Reporter

FRANKFURT — Despite the currency confusion and reduced production schedules in Great Britain, European sales of cars and light trucks in September were up 7.2 percent over the prior year.

September sales in the 17 nations surveyed by *Automotive News* were 937,000 units vs. 874,300 a year earlier.

For the nine-month period, sales were down 1.5 percent to 10.5 million units, from 10.7 million in 1991. Analysts now expect European sales to reach 13.1 million this year.

After a strong August, Germany again had a big increase in September, up 18.5 percent to 276,500 units from 233,300 a year earlier. Through September, German sales were down 9.3 percent.

In the other major markets, Italy was up 13 percent in September to 162,000 units and French sales improved 3.5 percent to 146,900 vehicles. The United Kingdom continued to show signs of the recession and sales were off 4 percent to 121,800 vehicles. Spain was off 1.1 percent to 55,000 units.

Volkswagen AG continued its runaway dominance of the European market, capturing a 17.7 percent share in September with a 31.3 percent sales increase to 165,600 units. VW has sales of 1.8 million for the nine-month period, up 5.6 percent from last year.

Peugeot S.A. is outperforming Ford of Europe and General Motors for the nine-month period. Sales of Peugeot, Citroen and Talbot makes were up 2.2 percent for September, and for the nine months the group topped GM with 1.3 million units, up 2.2 percent from a year earlier.

GM sales were up 32.1 percent for the month, increasing to 115,300 vehicles as the Astra production neared capacity, from 87,300 units last year. But nine-month sales are off 1 percent, ranking GM third for the period with a 12 percent market share.

Ford sales were down for both the month and year to date, making it the only Big Six European maker to show a decline in September. Sales fell 13.4 percent in September to 93,700 units, and were off 6 percent for the first three quarters to 1.2 million units. AN

Cars and trucks go own ways as year kicks off

JIM HENRY

Staff Reporter

The light-vehicle market began the 1993 model year with a widening split between rising truck sales and falling car sales.

Truck sales jumped 20.3 percent, while cars dropped 11.1 percent in the first 10 days of October. Automakers sold 299,314 cars and trucks, off 1.4 percent from the year-ago period.

Trucks have provided the only real growth so far this year, but as of Oct. 1, cars were in shorter supply than trucks. At the start of the month, the industry had a 59-day supply of cars and a 66-day supply of trucks, with a 62-day supply overall. That's down slightly from Sept. 1 levels, and up from 58 days a year ago. Last year, the supply of domestic-built cars was the lowest in nine years.

Early-October sales showed wide swings behind the steady inventory numbers.

In the Oct. 1-10 period, Ford Motor Co. trucks shot up 35.0 percent. The hot Ford Explorer was down to a 40-day supply Oct. 1.

Ford car sales also rose, up 6.1 percent. The Ford Taurus, another strong gainer, was down to a 51-day supply Oct. 1. Ford Motor Co. sales topped the slow year-ago period by 16.2 percent.

General Motors trucks climbed 24.8 percent, but GM sales were about even with a poor year-ago period because of a fall-off in cars. As of Oct. 1, the Saturn division had one of the lowest inventories in the business — 19 days.

Chrysler Corp. trucks rose nearly 16.0 percent, but car sales fell about 22.0 percent. Strong September sales helped clear the shelves at Chrysler, which had a 70-day supply Oct. 1, compared with 80 days a month earlier.

Automotive News estimates 10-day sales for Chrysler and for most imports.

Ten-day sales for American Honda Motor Co. Inc. and Toyota Motor Sales U.S.A. Inc. both fell short of a strong year-ago period. Toyota, which was up 39.1 percent last year, fell 18.7 percent this year. American Honda was up 29.1 percent a year ago, but plummeted 38.6 percent this year. Toyota's Lexus was down to a 19-day supply on Oct. 1.

Chrysler profits; Ford, GM see red

continued from PAGE 3

soft economies in the United States and Europe.

Ford said industry sales rates in the United States, Europe and other markets remain low and "these factors, coupled with seasonal dealer inventory adjustments, are expected to result in a loss in the third quarter."

Earnings could be worse. The Big 3 reported a combined net loss of $7.5 billion for 1991.

Third-quarter earnings are traditionally weak due to retooling costs and end-of-year model clearance sales. Combined third-quarter losses in 1991 were $1.7 billion.

The difference this year is that the Big 3 benefitted from a 3 percent improvement in production over last year, lower incentive costs and better fleet-to-retail sales mix. Automaker profits on retail sales of vehicles are higher than on fleet sales.

Chrysler continues to ride the crest of its low-cost manufacturing and rich product mix including strong consumer acceptance of new vehicles such as the Jeep Grand Cherokee.

Automakers will begin announcing third-quarter earnings this week.

VW will idle Passat and parts plants

FRANKFURT — Declining demand has forced Volkswagen AG to cut annual production of the Passat medium-sized family car by 11,600 vehicles through the end of the year. It is the first slowdown for Europe's biggest automaker since the mid-1980s.

Volkswagen, which captured a commanding 17.7 percent share of the European market in September, will shut its Emden plant that makes Passats Nov. 23-27 and Dec. 7-11, which will idle 11,000 of the factory's 12,000 workers. Emden will manufacture 250,000 Passats this year.

A transmission and stamping plant at Kassel will idle 2,500 of the 19,000 workers that make Passat parts, during the same period.

In addition, the truck plant at Hanover will reduce production of the Transporter T4 vehicle by 5,000 vehicles to 170,000 units this year by requiring workers to take a two-day holiday in late November.

Mercedes-Benz AG and Ford-Werke AG announced production cuts earlier this month. Adam Opel AG and BMW AG said they had no plans to trim output.

No cars? Saturn dealer trains staff

ARLENA SAWYERS
Staff Reporter

Don Lucas didn't have any Saturns to sell last week, but he kept the 150 employees in his four Saturn stores busy anyway.

Lucas, president of the Lucas Dealership Group in Cupertino, Calif., and his employees took a week-long refresher course in the Saturn way of doing things.

"There is no ideal time to be out of cars, but we've tried to turn a negative into a positive," Lucas said.

The stores — three located in northern California and another in Hawaii — have about 31 cars among them. Normally, each facility would have about 30 new cars on the lot.

Saturn reported a 19-day supply on Oct. 1, down sharply from a 42-day supply of cars a year earlier.

Saturns have been in short supply since last summer. Growing sales have taxed Saturn's Spring Hill, Tenn., plant, which is already operating at capacity. The shortage was compounded by a strike at a GM plant that supplied Saturn.

Lee Lucas, president of the group's Saturn division, said the company held 428 Saturn orders last week, down from about 450 a few weeks ago.

"We get them by the truck loads, about 10 at a time. Nine of the 10 are already sold," he said.

Lucas sold 2,057 Saturns in calendar 1991, and expects to sell 3,800 this year. Sales through July totaled 2,635.

The group plans to open Saturn stores in San Francisco and San Jose this year.

The training sessions, conducted by a team from the Saturn factory, included such mutual-trust builders as falling backwards off a ladder into the arms of teammates and being led blindfolded through an obstacle course by co-workers. AN

Mercedes says increase is 0.1%

JIM HENRY
Staff Reporter

TYSON'S CORNER, Va. — Mercedes-Benz of North America Inc. continues to sacrifice profit to protect its market share.

Price hikes for the 1993 models introduced so far range from zero to 2 percent, despite significant improvements to some models in the mid-sized 300 class, such as airbags and new engines.

Mercedes will continue to offer its subsidized "Win/Win" leases, said Michael Bassermann, president and chief executive officer.

U.S. sales through September were up 9.2 percent to 47,645 units, after falling about 25 percent last year.

"The uncertainty of the upcoming election is causing hesitancy on the part of our customers," Bassermann said.

Daimler-Benz of North America Corp., the holding company that includes the Mercedes distributor, reported net income of $54 million in 1991. That was only $1 million below 1990, but it was 28.6 percent below 1989. Mercedes-Benz cars account for about 75 percent of the holding company's sales.

Mercedes-Benz of North America said its 1993 price hikes averaged 0.1 percent. *Automotive News* estimates that amounts to $532.

A year ago, when the 1992 models were introduced, the Mercedes increase averaged 4.4 percent, which *Automotive News* put at $2,215.

Price hikes were enormous for the 1992 S class, which was an all-new model. The least-expensive version, the 300SE, was more than $11,000 above its predecessor. This year, the 1993 300SE is $500 above last year.

For 1993, Mercedes held the line on its 190-class models, which were introduced earlier. The 190 will be replaced by an all-new model next year.

Mercedes 300-class cars rose $400 to $850, even though the 300E sedan, the 300E 2.8 sedan, the 300CE coupe and the 300TE station wagon all got new, 24-valve engines. The new 300CE cabriolet debuts with a sticker of $76,500.

The S-class sedans, which were little changed for 1993, went up $500 to $1,200. Mercedes added the long-wheelbase 400SEL to replace the 400SE. Still to come are S-class coupes badged 500SEC and 600SEC.

SL-class roadsters for 1993 will be introduced later this year including the new 600SL.

On a percentage basis, the 300 models rose 0.8 to 2.0 percent, and the S class went up 0.7 to 1.0 percent. AN

BMW prices rise

WOODCLIFF LAKE, N.J. — BMW of North America Inc. announced a price increase averaging 4.4 percent, or $1,552, for its 1993 models, but the company said that equipment additions played a big role in the boost.

"When new equipment is factored into the pricing, the actual increase is only 1.1 percent," said President Karl Gerlinger. *Automotive News* estimates that the 1.1 percent amounts to $380.

New standard equipment includes a V-8 engine and electronically controlled five-speed automatic transmission for the 740i and 740iL sedans. The V-8 replaces the inline six-cylinder powerplant used in last year's models, which were designated 735i and 735iL.

New standard features include eight-way electric seats for the 325i four-door and the 325is two-door, and leather interior and wood trim for the 525i four-door.

Final 1993 prices have also been announced by Audi of America Inc. and several other importers. AN

NASSER

Ford exec told to revive Europe

continued from PAGE 3

months after assuming the presidency at Ford Australia in 1990, an almost completely new team of younger faces found itself in positions of power.

His fast track to the chairmanship of Ford's European operations bypassed several significant rungs on the Ford ladder. His promotion follows five years in South America, culminating as vice president of finance with Ford's Autolatina joint venture with Volkswagen AG, and a tumultuous 35 months as president of Ford Australia.

TROUBLE AT HOME

He came home to Melbourne, where he joined Ford as a graduate financial analyst in 1968, to find a bloated bureaucracy, a bland corporate image, two badly executed major product introductions and some fairly dull cars of poor quality.

Ford was on a slide, losing its decade-long market leadership to Toyota and posting losses.

The situation was similar to one Nasser will face in Europe. Ford of Europe is accused of having dull products, is losing money and its share of the market this year has slipped to 11.6 percent through September, down from 12.1 percent last year. The scale is different; the European market is 30 times as big as the 515,000 cars and trucks sold in Australia in 1991.

In Australia, Nasser's response was to write to every Ford employee detailing, in very plain language, the company's predicament. The document was long on home-truths and devoid of corporate-speak. He stressed that Japanese cost and quality standards were his goal and that major job cuts were imminent. He then cut a swath through executive, middle-management and factory floor ranks, shrinking Ford Australia's payroll by one-third to 8,500. By comparison, Ford has 117,000 employees in Europe.

Two years later, the much-criticized Ford Falcon, the company's biggest seller, emerged near the top of Australia's quality rankings and, after four years in the sales wilderness, regained its position as Australia's No. 1 seller. This without a single sheet-metal change.

Along the way, Nasser introduced affordable anti-lock brakes, smart color and trim combinations, more aggressive handling, increased performance, extended warranties and a large dose of added value equipment. He surprised rival General Motors with rapid-fire improvements.

PRODUCT, FINANCE SAVVY

Nasser is a hands-on product man, a regular visitor to Ford Australia's design studios and frequent fast-lane operator at the company's You Yangs Proving Ground. A lover of motorsports, he prompted Ford back on to Australian racetracks and was the driving force behind the formation of a joint venture with Britain's Tickford Ltd. to establish a Special Vehicle Operations-style, fast-car division at Ford Australia.

He's been equally adroit with the balance sheet. Ford Australia is operating profitably and, say insiders, the company's heavy debt load has been halved with an innovative approach to managing cash flow. Ford may even regain market leadership. It trails Toyota by just 3,000 units going into the last quarter.

Nasser has earned a high public profile with trenchant criticism of the Australian Opposition party's industrial and manufacturing policies. A recent message to employees, amounting to "don't vote for these guys if you want to keep your job," generated national publicity.

"I don't have an objective to be any one's fair-haired boy" he quips.

SHUNS CORPORATE ATTIRE

This engaging Lebanese-born Australian graduated from the Royal Melbourne Institute of Technology, then spent five years at Ford Australia before transferring to the United States. He worked in various financial positions in Asia-Pacific, Brazil and Argentina, interwoven with periods in the United States, before going home to restructure Ford of Australia.

Nasser projects a relaxed, controlled aura and he's seldom, if ever, seen in the corporate uniform of dark blue suit and conservative tie. He despairs of comment on his personal style but has a fondness for well-cut suits and antique Rolexes. He's also a regular at his brother's upscale Melbourne nightclub.

A natural communicator, he opened his first Australian press conference, facing a hostile audience, with the words:

> “I'm pretty demanding in what I expect from people, pretty single-minded. But I don't yell or scream. I'm pretty even tempered and I like people to express their views.”
>
> **JAC NASSER**
> FORD OF AUSTRALIA

"I'll never tell you something I don't believe. I'll never meet with you and tell you something that will mislead you."

He has lived up to that promise.

Here's how a top-selling Australian Sunday newspaper reported that press conference: "Ford's new president speaks six languages. Arabic, Spanish, Portuguese, English, Straight and Corporate Blasphemy."

Europe can expect a whirlwind of energy and drive with a refreshing dash of informality.

"Whenever I enter a job" says Nasser, "I do so with a degree of reluctance. Whenever I leave a country or a job I leave with a degree of sadness, but I adapt pretty quickly and I enjoy it. I'm pretty demanding in what I expect from people, pretty single-minded. But I don't yell or scream. I'm pretty even tempered and I like people to express their views."

Europe, he readily admits, will be his biggest challenge.

The 1966 Mustang 289 convertible and the 1970 Aston-Martin DBS V-8 will stay in Melbourne.

But that long-discussed new Italian-built Moto Guzzi motorcycle may finally materialize in a garage near Ford of Europe's headquarters in England. AN

VP

High mpg will kill how many jobs?

continued from PAGE 1

rent standard is 27.5 mpg for cars.

MVMA based projections for the year 2001 on these assumptions:

- A 10 percent decline in car and light truck sales. The sales drop is blamed on higher prices, due to the increased cost of fuel technology.
- An 87 percent drop in the sales of the Big 3's large and luxury cars, and a 72 percent drop in mid-sized cars.
- Increased sales of small cars, which require nearly 20 percent less labor than large cars.
- Asian transplants grabbing half the new market for smaller cars. Auto industry jobs would be cut because transplants require half the labor of Big 3 production.

That was the basic scenario. Only 173,000 jobs would be lost if sales held steady, the MVMA said. That could happen, for example, if the price of gas went up enough to make investments in new technology cost-effective.

In another scenario, 159,000 jobs would be lost if the Big 3 could raise their share of the small-car market to 53 percent.

In the worst-case projection, MVMA said total vehicle sales would drop an additional 1 million units as consumers held on to their older, bigger cars. In that case, 315,000 jobs would be lost, MVMA said.

The group issued its research as it fought CAFE increases during the last two sessions of Congress.

UAW economist Steve Beckman characterized the MVMA study as "speculation."

Said Beckman, "It's not based on real hard evidence of what might really happen."

But like the rest of the auto industry, the UAW opposed the Bryan proposal. "It's not technologically feasible," he said.

The union believes that more modest increases in fuel economy, coupled with revisions of the CAFE law, would help U.S. auto workers, Beckman said.

Privately, MVMA officials say they have been questioned by the Bush-Quayle campaign about the job loss estimates. They say the campaign was trying to get the MVMA to support the worst-case scenarios.

When asked about the Bush-Quayle inquiries, MVMA spokesman Edward Lewis said, "We stand by our numbers." He stressed that the association is neutral in the presidential campaign.

A Republican briefing paper on the issue accurately cites the MVMA figures on potential job losses. It also quotes Gov. Bill Clinton as saying he would seek to raise CAFE to 40 mpg by 2001 and 45 mpg by 2020.

Quayle's charge in last week's debate merged the upper range of those two unrelated statements.

Clinton has softened his own stance on CAFE, saying the goal of 45 mpg he endorsed earlier should be weighed against the feasibility of available technology to improve gas mileage.

In a Detroit speech in August, Clinton cited reports by the National Academy of Sciences and the U.S. Office of Technology Assessment. Those studies said CAFE standards in the range of 33 to 35 mpg would be technologically feasible by the end of the century.

Gore has been a leading Senate advocate of environmental protection.

In his book, *Earth in the Balance*, Gore said the cumulative effects of automobiles worldwide poses a "mortal threat" to the global environment. Gore makes no fuel economy recommendations in the book, but he said it should be possible to phase out the internal combustion engine over the next 25 years.

President Bush may try to get some mileage out of the fuel economy issue as the presidential debate shifts tonight to East Lansing, Mich., not far from headquarters for General Motors' Oldsmobile Division and several GM factories.

Bush has consistently opposed any increase in the CAFE standard. He says higher mileage requirements would cost jobs and lives would be lost by making cars smaller.

In the vice presidential debate, Quayle's charge on CAFE came during an answer to a question on balancing environmental protection with job growth. Quayle said that with "prudent policies," the United States can have both.

In his response, Gore never addressed CAFE. He said that his religious tradition has taught him to be a steward of the earth. He believes an "environmental revolution" will create jobs. AN

Nissan adds spiffs to '92s, some '93s

JENNIFER HEIL
Special Correspondent

Nissan has announced a new dealer incentive program that expires Nov. 3. Rebates and terms of the program vary among Nissan's seven regions.

Depending on region, the incentives for the 1992 Sentra range from $500 to $1,000; 1992 NX1600 and 240SX, $1,000 to $1,500; 1992 Maxima, $1,000 to $2,000; and 1992 Stanza, $1,000 to $2,300. The highest rebate range is for the 1992 300ZX, $1,000 to $2,500.

Dealer rebates range from $1,000 to $1,750 on the 1992 Pathfinder and 1992 trucks. Rebates for 1993 trucks range from $750 to $1,600.

Nissan also is in the process of selling off about 18,000 vehicles apparently damaged by acid rain. Nissan is giving dealers up to $1,000 per unit and cutting retail prices up to $1,200 per vehicle. (See story on Page 6)

Honda has placed a $500 dealer incentive on the 1992 Accord. It expires Oct. 31.

Hyundai added two more 1993 models to its customer incentive program. A $500 rebate was placed on the 1993 Scoupe and Excel models. Hyundai incentives expire Nov. 3. AN

EMCO

31-franchise auto group bought

continued from PAGE 1

Agoura Hills, Calif.

Emco President Ezra Mager said the company also had purchased six other franchises in the area in unrelated transactions. Some will go into DiFeo real estate while others will require new real estate acquisition.

The DiFeo franchises are spread across 21 locations in northern New Jersey; Rockland County, N.Y.; and Fairfield County, Conn. They include all General Motors and Chrysler brands and Lexus, Infiniti, Toyota, Honda, Nissan, BMW and Volkswagen.

Emco plans to add new dealerships in the future, Mager said.

"We hope to eventually have a company doing in excess of $1.5 billion in sales annually," he said.

The DiFeo name will remain on the dealerships and the former owners, brothers Samuel DiFeo Jr. and Joe DiFeo, were named executive vice presidents at Emco responsible for the management of the dealerships.

Joseph Herman, a former partner with the U.S. Auto Group, a Birmingham, Mich., holding company that operates a chain of dealerships around the country, was named chief executive officer.

Published reports say the DiFeo family will retain a 10 percent to 30 percent stake in the new partnership.

The DiFeo group has nine locations in Jersey City; seven in Danbury, Conn.; two each in Bound Brook, N.J., and Nyack, N.Y.; and one in Tenafly, N.J. Another location is to open in Waterbury, Conn.

Dave Power, president of J.D. Power and Associates, said the dealership acquisition is part of a growing trend toward dealership consolidations. He expects to see other large transactions in the near future.

Mager, a former investment banker, was involved in the purchase of the California-based Val Strough Dealership Group by Select Automotive in 1990. Select Automotive is a subsidiary of Warburg Pincus, a New York investment firm. ■

Truck build hits 4 million

ANNE E. WRIGHT
Chief Statistician

Truck production in the United States and Canada topped the 4 million mark last Friday, nearly two months earlier than that total was reached in 1991.

U.S. truck production totaled 91,298 last week, 4.7 percent ahead of the prior week and 1.3 percent ahead of the year-ago week.

Year-to-date U.S. truck production is 3,275,773, 19.3 percent ahead of the 2,746,070 assembled at this point in 1991.

In Canada, truck production totaled 15,170 last week, 12.3 percent below the prior week and 15.2 percent below the same week in 1991.

Car production in the United States was 117,207 last week, 1.1 percent above the prior week and 14.6 percent below the same week in 1991.

Since the beginning of the year, 4,566,133 cars have been assembled in the United States, 4.7 percent ahead of the 4,359,546 assembled at this point last year.

Canadian car production totaled 19,933 last week, 14.0 percent above the prior week and 9.7 percent below the year-ago week.

So far in 1992, the Canadian car total is 826,221, 6.6 percent behind the 884,213 produced in 1991.

Last week's scheduled U.S. car and truck production was shared as follows:

General Motors, 39.9 percent; Ford Motor Co., 27.9 percent; Chrysler Corp., 11.5 percent; Honda of America Manufacturing Inc., 4.2 percent; Nissan Motor Manufacturing Corp., 3.9 percent; AutoAlliance International Inc., 2.9 percent; New United Motor Manufacturing Inc., 2.8 percent; Toyota Motor Manufacturing (U.S.A.), 2.4 percent; Diamond-Star Motors Corp., 1.4 percent; Subaru-Isuzu Automotive Inc., 1.3 percent; miscellaneous, 0.9 percent; Navistar International Corp., 0.8 percent and AM General, 0.1 percent.

Ford scheduled daily overtime last week at the Atlanta and Chicago car plants. Both plants produce the Ford Taurus and the Mercury Sable and have operated daily overtime since start-up of the 1993 model production in early August.

Five of Ford's truck plants also worked daily overtime last week: Louisville, Ky.; Twin Cities (St. Paul, Minn.); St. Louis; Kansas City, Mo.; and Edison, N.J.

GM will idle the Detroit truck assembly plant this Thursday due to slow sales and high inventory levels. The plant will resume production on Monday, Oct. 26.

Chrysler's St. Louis, Jefferson Ave. North (Detroit), and Windsor, Ontario, truck plants scheduled overtime last Saturday.

Last Monday all Canadian assemblies were closed in observance of the Canadian Thanksgiving holiday. ■

GM board pours on heat

Smale casts doubt on Stempel's job

PHIL FRAME and CHARLES M. THOMAS
Staff Reporters

General Motors' outside directors last week added fuel to rampant speculation that Robert Stempel is about to be ousted as chairman, a post he has held since August 1990.

John Smale, the former Procter & Gamble Co. chairman who is leading the increasingly assertive group of 11 non-employee directors, pointedly failed to endorse the embattled Stempel, 59, in a statement issued last week.

The statement, which followed a *Washington Post* story that directors were preparing to ask Stempel to step down, said the board had taken "no action" regarding any management changes at GM.

"However, the question of executive leadership is a primary concern to . . . directors of any company, and GM is no exception," the statement continued. "The board continues to carefully reflect upon the wisest course for assuring the most effective leadership for the corporation."

In another apparent indication of the uncertainty surrounding Stempel, GM officials early Friday canceled on two hours' notice an interview with Stempel that *Automotive News* had scheduled more than a month ago.

A GM spokesman said Stempel had to rearrange his schedule.

According to Eugene Jennings, a retired Michigan State University management professor with ties to the GM board, directors have been moving for weeks to convince Stempel to leave quietly.

But now, Jennings said, their time line has been shortened by the *Post* leak, and the departure likely will be announced at the Nov. 2 board meeting.

"Stempel is a good manager, but not the right man at the right time," he said. "He is not the guy to run the company in a crisis."

According to Jennings, the 65-year-old Smale likely will be named interim chairman to assure investors that the board is living up to its responsibilities.

"Pair Smale with the car guys in the company, and you'll have a good team," he said. "Smale has the organizational skills to refocus and restructure GM."

Smale led a board revolt in April that removed Lloyd Reuss as president of GM, replacing him with Jack Smith. At that time, Smale also replaced Stempel as chairman of the board's executive committee.

However, the board in April issued a statement asserting confidence in Stempel.

While Stempel enjoys the respect of many of GM's 9,100 dealers, they also acknowledge Smale's abilities, said a member of a division's national dealer council.

"Dealers have always trusted

see STEMPEL, 33

Smale's statement:

The GM Board of Directors has taken no action regarding any management changes at GM. However, the question of executive leadership is a primary concern to the Board of Directors of any company and GM is no exception. The GM Board of Directors continues to carefully reflect upon the wisest course for assuring the most effective leadership for the corporation.

Three outside directors at the May annual meeting: Pastor Leon Sullivan; John Smale; and Anne Armstrong, a presidential adviser.

More cuts: GM merges platform operations

PETER BROWN
Editor

In a further effort to eliminate jobs and to focus on car programs, General Motors is centralizing its car-development operations.

GM said Friday it is combining its five car platform organizations into three.

Cadillac, which alone among GM's traditional divisions had responsibility for car development and manufacturing, will lose that autonomy. Cadillac will combine with the Flint Automotive Division into the Cadillac/Luxury Car Engineering and Manufacturing Division, in charge of large front-wheel-drive cars.

The company also is folding the rear-wheel-drive product team into the Midsize Car Division.

So the new system has three platform teams: Cadillac/Luxury; Midsize; and Lansing Automotive Division, which continues in charge of small cars. Saturn Corp. remains a separate system.

The moves follow the strategy

New Mazda franchise angers dealers in California

KRISTINE STIVEN BREESE
Staff Reporter

LOS ANGELES — Mazda Motor of America Inc. is locked in a battle with a group of California dealers over the company's new franchise.

The dealers believe the agreement gives Mazda far-flung rights to terminate their franchises, add new points and dictate when and if they can sell their dealerships.

But the company says a stronger agreement is "the next logical step" in the evolution of the "new Mazda." The company has provided a lineup of new products, said George McCabe, Mazda group vice president and general manager. Mazda expects dealers to give something in return.

Dealers think Mazda is asking more than other franchisors.

"It's like Mazda took the worst of all the other agreements out there and patched them together to make their new agreement," said a multi-line Southern California dealer. Like the other dealers contacted for this report, he did not want his name used.

The pact is due to take effect Jan. 1. The agreement was last revised in 1987, before Mazda's separate U.S. sales organizations were

Staff Reporter

NEW YORK — Chrysler Corp.'s rising fortunes are propelling dealers to record profit levels.

Chrysler's three franchised dealer groups will earn an average 26 to 28 percent return on investment this year, said Chrysler President Robert Lutz. About 90 percent of the dealers are profitable, Lutz added.

Chrysler-Plymouth dealers, in fact, are expected to average well over $300,000 in earnings and Jeep-Eagle and Dodge dealers close to $250,000.

Chrysler plans to keep up the profit pressure with its new LH models, and "no-dicker stickers," geared to customer satisfaction.

Ford's new Topaz

Expected styling for the next generation Mercury Topaz is shown in this computer-enhanced spy photograph. A product of the automaker's world car program, the European version will debut next spring as the Ford Mondeo. U.S. versions are expected in the 1994 model year. Power will come from Ford's new four-cylinder Zeta engine with a six-cylinder engine also available. Two- and four-door body styles are expected.

CONTINUED
from PAGE 1

January introduction. The car originally was scheduled to be sold in the United States in October, a year after its European launch.

Labor problems have arisen. As a result, production is slow and quality is not up to standards, Sauer said.

Volkswagen of America also told Volkswagen AG that it does not want the new 16-valve GTI Golf, which bowed at the Paris auto show, and would rather wait for the six-cylinder Golf, he said.

— Diana T. Kurylko

Downtime set for Vette plant

General Motors plans to close its Corvette plant in Bowling Green, Ky., for two weeks in November because of slow sales, a union source said.

The single-shift plant will shut down during the first and third weeks of the month. The plant builds 96 cars a day, so the closing will cost 960 cars. On Oct. 1, Chevrolet had a 98-day supply of Corvettes, with 6,200 cars on hand.

Corvette sold 14,170 cars through the first nine months of this year, up from 13,190 a year ago. GM had planned to build 22,000 cars this year.

A GM spokesman would not comment. He cited GM's policy of not announcing production schedules more than a week in advance.

— Lindsay Chappell

Cut-rate price for loaded Olds

Oldsmobile is offering a heavily equipped "95th Anniversary Special Edition Cutlass Supreme" that carries a deeply discounted $15,995 sticker price. The car is offered from Oct. 19 to Jan. 24.

The SL Supreme, available in coupe and four-door versions, is offered to dealers nationwide and includes a four-speed automatic transmission, 3.1-liter V-6, cruise control, power windows, rear defogger, pulse wiper, tilt wheel and cassette tape player.

The special price is offered in response to the one-price Ford Thunderbird LX. Jill Witzenburg, an Oldsmobile spokeswoman, said that dealers can lower the price to be more competitive.

— Jack Keebler

Saab trims Nov. build

GOTHENBURG, Sweden — Because of weak demand in key markets, Saab Automobile has announced it will close its Trollhattan plant for five days in late November.

This will reduce production by 2,700 cars.

— Stig Bjorklund

Mark VIII V-8 gets fixed

Ford Motor Co. has identified and fixed a serious engine problem in some of its 1993 Lincoln Mark VIIIs. None of the vehicles will be shipped to dealers.

Bert Serre, a Ford spokesman, said engine production at the Romeo, Mich., plant was stopped for four hours earlier this month when a "missing or defective piston rod clip" in the new 32-valve, all-aluminum V-8 turned up through "in-plant quality control testing procedures."

He said about 400 to 500 vehicles were checked and given the green light.

A source said these cars will be placed in Ford's fleets.

Chrysler Corp. had a similar problem with its 24-valve, 3.5-liter V-6, which is offered in the 1993 Dodge Intrepid, Eagle Vision and Chrysler Concorde. The automaker said that problem was a misinstalled piston wrist pin clip. Approximately 1,600 cars were recalled last month.

— Liz Pinto

Contracts near for battery r&d

The United States Advanced Battery Consortium Thursday will announce development contracts totaling $53 million with three battery companies and three national labs.

The contracts are for new high-energy batteries for vehicles that could provide significant range and power advantages over batteries currently available. The types to be funded are: lithium polymer, lithium metal sulfide and nickel metal hydride.

In January 1991, Chrysler Corp., Ford Motor Co. and General Motors formed a partnership with the Electric Power Research Institute to form the consortium.

— Jack Keebler

Car sales jump in mid-October

U.S. domestic-built car and light-truck sales rose 25.6 percent in the middle 10 days of October.

Total domestic car sales increased 15.6 percent from the year-ago period and trucks rose 43.2 percent.

Total domestic unit sales at General Motors rose 19.3 percent. Ford Motor Co. sales were up 38.7 percent. Chrysler Corp. sales increased an estimated 15.7 percent.

Total Big 3 sales accounted for 87.7 percent of all reported domestic sales.

There were eight selling days in the period this year and last year.

— Karen Detkowski

Lamborghini might be sold

NEW YORK — Chrysler Corp. has discussed selling its Automobili Lamborghini S.p.A. operation with interested outsiders, but has no current offers for the Italian firm, Chrysler Vice Chairman Robert Eaton said.

Some analysts value the firm at $40 million, but Chrysler President Robert Lutz said he's never heard an offer that low. Chrysler is "in no big hurry" to sell the firm, he added.

— Joseph Bohn

Nissan to open safety center

TOKYO — Nissan Motor Co. will establish a research center early next year in Cambridge, Mass., to study active forms of safety. Nissan will invite faculty from nearby Massachusetts Institute of Technology and Harvard University to help develop the program.

— Mary Ann Maskery

briefly

Eaton: it's just like home

Chrysler Corp. Vice Chairman Robert Eaton was surprised at how easy it was to adapt to Chrysler from his post as president of **General Motors of Europe.** "I quite frankly would have had a much bigger cultural shock going from GM of Europe to GM in the United States than from GM of Europe to Chrysler. They're roughly the same size, operate without much bureaucracy, operate without a formalized committee structure and there's a very, very strong team in place. And so it's been far, far, far less of a change than I expected."

WICKET RACKET — Volvo has tennis, **Land Rover** goes for polo, everybody loves golf, and now **Jaguar Cars USA** is the official sponsor for the United States Croquet Association. "Jaguar cites many similarities between croquet followers and Jaguar owners," says Jaguar's owner newsletter, *The Leaper*.

SMEAR CAMPAIGN — Land Rover North America Inc. has a timely ad running. It invites buyers to "sling some mud this election year."

L&TT&R FROM HOM& — What a difference an 'e' can make. Vice President Dan Quayle knows. So does **Chrysler** marketing honcho John Damoose. He was asked why Chrysler resurrected the Concorde name, last used on the **American Motors** Concord, for its new luxury sedan. "It's not the same name," Damoose said. "The AMC Concord did not use an 'e.' "

RED WATCH — When will **Ford Motor Co.** Chairman Red Poling retire? Probably not before Feb. 6. He speaks then to the National Automobile Dealers Association convention in New Orleans.

COUNTING CHICKENS — Ford had a snazzy TV ad ready to run last June, featuring Michael Andretti winning the Indy 500 for Ford. "When we're cookin', everybody else has to settle for seconds," the ad said. Trouble is, Andretti finished 13th. The ad never ran. Ross Roberts, general manager of Ford Division, said that's OK. Roberts said Ford can use the same ad "when we win next year."

EVERYONE PAYS — When the Toyota delegation showed up at Convergence '92 in Dearborn, Mich., last week, a staff member asked at the registration desk for Shoichiro Toyoda's badge. Ah, the **Toyota** chairman has not yet paid. What, even though he was asked to be a keynote speaker? Yes. Even President Bush's science adviser, D. Allan Bromley, was expected to buy his own $190 ticket.

SILVER STREAK— Kim Sung-Hong, chairman of **Kia Motors Corp.**, told Convergence '92 that Kia would find its place in the global auto industry by occupying product niches. Then he said electronics should be used in future cars to make them friendlier for elderly drivers. So is Chairman Kim suggesting that Kia's niche might be cars for seniors? No. He told *Automotive News* after his address that he was merely giving free ideas to the electronics industry.

Kim: a future in niches

Sampler of sayings on '92 election

Auto industry executives' views of the presidential election vary. Here's a sampling:

Chuck Worrell, Subaru of America Inc. executive vice president: "People are tired with whatever's going on right now. Good or bad, they're looking for a change."

Michael Plumley, chairman of Plumley Cos., a rubber-extrusion products supplier in Paris, Tenn.: "I'm in a quandry right now. I'm either going to vote for Bush or Perot.

"I'm definitely not going to vote for Bill Clinton. Clinton's trade policies are short-term fixes.

"Trade protection might protect some American jobs by forcing some Japanese buyers over to Big 3 cars. But that's not in the industry's long-term best interests.

"In the long term, we should have a free market that forces us all to be more efficient and competitive."

Victor Sun, the WEFA Group senior economic analyst: "The biggest thing that Clinton has going for him is health care reform. If he can get that passed, it might work in favor of the Big 3. Health care is one of the biggest costs they're carrying right now."

Richard Recchia, Mitsubishi Motor Sales of America Inc. executive vice president and chief operating officer: "I think the election for president is important, but for import car companies I'm not sure that it's as important as what happens in the House and Senate.

"If Bush gets re-elected, for example, and the Congress passes some type of protectionist legislation, he would probably veto it. But depending on the makeup of the Congress, it's unclear if there would be enough votes to override the veto or not.

"If Clinton gets elected, as all the polls seem to suggest, the question is whether he would veto the same legislation.

"He calls himself a free trader and says he's for NAFTA, but he might be more prone to go along with Congress because he'd be fighting his own party."

Walter Genthe, president of Hella North America Inc., a lighting components supplier in Flora, Ill.: Ross Perot is the only candidate "with the guts to fight Congress and the business experience to correct the problems." But Genthe believes free trade with Mexico is the most important issue. Perot opposes the agreement. "I don't agree with his view that free trade will create a sucking sound of industry going south. It's a contradiction I'm caught in."

Jerry Benefield, Nissan Motor Manufacturing Corp. U.S.A. president and chief executive officer: "I hope that whoever becomes president can get beyond the rhetoric and see how important free trade is to the United States' global strength. They should have the attitude that direct foreign investment is important for this country and be able to do the job without resorting to protectionist action."

Lee Iacocca, Chrysler Corp. chairman: "It's not one guy that makes the difference. It's the 535 guys in Congress who really decide what happens." AN

ELECTION

No candidate gets complete auto OK

continued from PAGE 3

stration will be less free trade," said Harrington, assistant vice president of government and industry relations at Honda North America Inc.

Some important issues haven't come up in the campaign at all.

"There has been no discussion of harmonization of government policy," Pochiluk said. "Emissions, CAFE and safety are often in conflict. You improve one at the expense of the others. We haven't seen anything about that."

And there has been little talk of the candidates' differences on labor issues. That could be important to the Big 3, where UAW contracts expire next year.

David Cole, director of the Office for the Study of Automotive Transportation at the University of Michigan, said that while Clinton and Bush may set slightly different tones in the White House, he doesn't view the choice as an either-or decision.

"I see Washington becoming more committed to the role of private enterprise in our economy," he said. "I expect to see a much more reasonable approach to industry, not just viewing it as the enemy.

"The industry desperately needs a government that is going to be a little less focused on regulation and more on a systems view of the industry," Cole added. "There needs to be more coordination of policies. I think there is movement in that direction, and it seems to be reasonably bipartisan." AN

Automotive News Staffers Kristine Stiven Breese in Los Angeles, Edward Lapham in Detroit, Jim Henry in New York and Lindsay Chappell in Nashville, Tenn., contributed to this report.

incentive WATCH

Chrysler puts dealer rebates on some '93s

Chrysler Corp. is offering dealer incentives on some 1992 and 1993 models. The rebates expire Dec. 31 and are based on units sold.

Rebates for the 1992 and 1993 **Chrysler** New Yorker Salon, Fifth Avenue and Imperial range from $1,000 to $2,000.

Dodge Colt and Dynasty 1992 and 1993 models carry dealer incentives from zero to $2,000.

Incentives for the **Eagle** Summit and **Plymouth** Colt and Vista range from zero to $1,000.

UAW seeks voice at Navistar

LIZ PINTO

Staff Reporter

The UAW has won a chair at General Motors' table to determine how the company will be downsized. Now, the union is seeking a similar spot with Navistar International Corp.

The UAW wants to have a say in the buyouts and changes that will be made to save Navistar.

Through a series of strategic strike letters this summer and fall that threatened virtually all GM operations, the UAW proved the importance of its role.

"If there is a requirement for a lean contract for the ultimate survival of GM, it will now be a negotiated one, not one directed at them," said Sean McAlinden of the University of Michigan's Office for the Study of Automotive Transportation.

The UAW announced Oct. 13 that it was "prepared to be a part of the solution" at GM and, according to labor sources, "they are now at the table every day with GM working on a plan for downsizing in an orderly fashion."

John Maciarz, GM spokesman, said, "We certainly appreciate not only the UAW's offer of help but anyone else who wants to help. We've always said we have more in common than in conflict."

On Oct. 16, Navistar announced it has withdrawn the lawsuit that sought court approval of its right to change retirees' health care packages unilaterally. The UAW issued a statement of support.

Labor experts called the Navistar and UAW moves positive and similar to the scenario at GM.

"The only way to solve the current issues at Navistar and GM is at the bargaining table, and it's good to see that both sides have come to their senses and are going back to it," said Ron Seeber, Cornell University labor expert.

A union spokesman said that since Navistar and GM are in trouble, "we're in trouble."

"But we disagree about the root of the problems," he said. "We don't think the UAW contract or work force are the problems."

David Cole, director of the Office for the Study of Automotive Transportation at the University of Michigan, said cooperative attitudes will help facilitate solutions for the struggling corporations. ■

U.S. AND CANADA CAR AND TRUCK PRODUCTION

Vehicles are assembled in the United States unless noted. Vehicles are cars unless noted.

Output resumes at CAMI

ANNE E. WRIGHT

Chief Statistician

Employees at the CAMI plant in Ingersoll, Ontario, returned to work last Wednesday after a five-week strike that stopped production of the Geo Metro and Suzuki Swift cars and the Geo Tracker and Suzuki Sidekick sport-utilities.

In Canada, car production was estimated at 18,003 last week, 11.4 percent below the prior week and 12.6 percent below the same week in 1991.

So far this year, 844,607 cars have been assembled in Canada, 6.4 percent behind 1991.

Car production in the United States was estimated at 130,436 last week, 15.4 percent above the prior week and 5.9 percent below the year-ago week.

Year-to-date car production in the United States is 4,692,381, up 5.8 percent from 1991.

Estimated truck production in the United States was 94,624 last week, 8.8 percent above the prior week and 9.1 percent above the year-ago week.

So far this year, 3,366,082 trucks have been assembled, 18.7 percent ahead of 1991.

In Canada, truck production was estimated at 17,429 last week, 13.5 percent ahead of the prior week and 11.6 percent below the year-ago week.

Last week's estimated daily build rate of cars and trucks in the United States and Canada was 52,098, up 10.5 percent from the prior week and down 2.0 percent from the year-ago week.

Last week's estimated car and truck production in the United States was shared as follows: General Motors, 38.1 percent; Ford Motor Co., 29.8 percent; Chrysler Corp., 12.4 percent; Honda of America Manufacturing Inc., 3.9 percent; Nissan Motor Manufacturing Corp., 3.6 percent; New United Motor Manufacturing Inc., 3.1 percent; AutoAlliance International Inc., 2.6 percent; Toyota Motor Manufacturing (U.S.A.), 2.6 percent; Diamond-Star Motors Corp., 1.3 percent; Subaru-Isuzu Automotive Inc., 1.2 percent; miscellaneous, 0.9 percent; Navistar International Corp., 0.4 percent; and AM General, 0.1 percent.

Ford scheduled daily overtime last week at the Atlanta and Chicago car plants and on the car line at the Lorain, Ohio, facility.

Ford also ran daily overtime last week at the following truck plants: Louisville, Ky.; Twin Cities (St. Paul, Minn.); St. Louis; Kansas City, Mo.; Edison, N.J; and Avon Lake, Ohio.

GM scheduled daily overtime this week at the Moraine, Ohio, truck facility and on the Suburban line at the Janesville, Wis., truck plant.

Chrysler's St. Louis; Jefferson Avenue North (Detroit); and Windsor, Ontario, truck plants worked overtime last Saturday.

Toyota's Georgetown, Ky., car plant worked two shifts of overtime last Saturday. ■
